Talk is a set of protocols which allow two people to have an interactive dialogue via computer.

* Use mixed case and proper punctuation, as though you were typing a letter or sending mail.

* Don't run off the end of a line and simply let the terminal wrap; use a Carriage Return (CR) at the end of the line. Also, don't assume your screen size is the same as everyone else's. A good rule of thumb is to write out no more than 70 characters, and no more than 12 lines (since you're using a split screen).

* Leave some margin; don't write to the edge of the screen.

* Use two CRs to indicate that you are done and the other
person may start typing. (blank line).

* Always say goodbye, or some other farewell, and wait to see a
farewell from the other person before killing the session.
This is especially important when you are communicating with
someone a long way away. Remember that your communication
relies on both bandwidth (the size of the pipe) and latency
(the speed of light).

* Remember that talk is an interruption to the other person.
Only use as appropriate. And never talk to strangers.

* The reasons for not getting a reply are many. Don't assume
that everything is working correctly. Not all versions of
talk are compatible.

* If left on its own, talk re-rings the recipient. Let it ring
one or two times, then kill it.

* If a person doesn't respond you might try another tty. Use
finger to determine which are open. If the person still
doesn't respond, do not continue to send.

* Talk shows your typing ability. If you type slowly and make
mistakes when typing it is often not worth the time of trying
to correct, as the other person can usually see what you
meant.

* Be careful if you have more than one talk session going!

2.2 Administrator Issues

* Be sure you have established written guidelines for dealing with
situations especially illegal, improper, or forged traffic.

* Handle requests in a timely fashion - by the next business day.

* Respond promptly to people who have concerns about receiving improper
or illegal messages. Requests concerning chain letters should be
handled immediately.

* Explain any system rules, such as disk quotas, to your users. Make sure
they understand implications of requesting files by mail such as:
Filling up disks; running up phone bills, delaying mail, etc.

* Make sure you have "Postmaster" aliased. Make sure you have "Root"
aliased. Make sure someone reads that mail.

* Investigate complaints about your users with an open mind. Remember
that addresses may be forged and spoofed.

3.0 One-to-Many Communication (Mailing Lists, NetNews)

Any time you engage in One-to-Many communications, all the rules
for mail should also apply. After all, communicating with many

people via one mail message or post is quite analogous to communicating with one person with the exception of possibly offending a great many more people than in one-to-one communication. Therefore, it's quite important to know as much as you can about the audience of your message.

3.1 User Guidelines

3.1.1 General Guidelines for mailing lists and NetNews

* Read both mailing lists and newsgroups for one to two months before you post anything. This helps you to get an understanding of the culture of the group.

* Do not blame the system administrator for the behavior of the system users.

* Consider that a large audience will see your posts. That may include your present or your next boss. Take care in what you write. Remember too, that mailing lists and Newsgroups are frequently archived, and that your words may be stored for a very long time in a place to which many people have access.

* Assume that individuals speak for themselves, and what they say does not represent their organization (unless stated explicitly).

* Remember that both mail and news take system resources. Pay attention to any specific rules covering their uses your organization may have.

* Messages and articles should be brief and to the point. Don't wander off-topic, don't ramble and don't send mail or post messages solely to point out other people's errors in typing or spelling. These, more than any other behavior, mark you as an immature beginner.

* Subject lines should follow the conventions of the group.

* Forgeries and spoofing are not approved behavior.

* Advertising is welcomed on some lists and Newsgroups, and abhorred on others! This is another example of knowing your audience before you post. Unsolicited advertising which is completely off-topic will most certainly guarantee that you get a lot of hate mail.

* If you are sending a reply to a message or a posting be sure you summarize the original at the top of the message, or include just enough text of the original to give a context. This will make sure readers understand when they start to read your response. Since NetNews, especially, is proliferated by distributing the postings from one host to another, it is possible to see a response to a message before

seeing the original. Giving context helps everyone. But do not include the entire original!

* Again, be sure to have a signature which you attach to your message. This will guarantee that any peculiarities of mailers or newsreaders which strip header information will not delete the only reference in the message of how people may reach you.

* Be careful when you reply to messages or postings. Frequently replies are sent back to the address which originated the post - which in many cases is the address of a list or group! You may accidentally send a personal response to a great many people, embarrassing all involved. It's best to type in the address instead of relying on "reply."

* Delivery receipts, non-delivery notices, and vacation programs are neither totally standardized nor totally reliable across the range of systems connected to Internet mail. They are invasive when sent to mailing lists, and some people consider delivery receipts an invasion of privacy. In short, do not use them.

* If you find a personal message has gone to a list or group, send an apology to the person and to the group.

* If you should find yourself in a disagreement with one person, make your responses to each other via mail rather than continue to send messages to the list or the group. If you are debating a point on which the group might have some interest, you may summarize for them later.

* Don't get involved in flame wars. Neither post nor respond to incendiary material.

* Avoid sending messages or posting articles which are no more than gratuitous replies to replies.

* Be careful with monospacing fonts and diagrams. These will display differently on different systems, and with different mailers on the same system.

* There are Newsgroups and Mailing Lists which discuss topics of wide varieties of interests. These represent a diversity of lifestyles, religions, and cultures. Posting articles or sending messages to a group whose point of view is offensive to you simply to tell them they are offensive is not acceptable. Sexually and racially harassing messages may also have legal implications. There is software available to filter items you might find objectionable.

3.1.2 Mailing List Guidelines

There are several ways to find information about what mailing lists exist on the Internet and how to join them. Make sure you understand your organization's policy about joining these lists and posting to them. In general it is always better to check local resources first before trying to find information via the Internet. Nevertheless, there are a set of files posted periodically to news.answers which list the Internet mailing lists and how to subscribe to them. This is an invaluable resource for finding lists on any topic. See also references [9,13,15] in the Selected Bibliography.

* Send subscribe and unsubscribe messages to the appropriate address. Although some mailing list software is smart enough to catch these, not all can ferret these out. It is your responsibility to learn how the lists work, and to send the correct mail to the correct place. Although many many mailing lists adhere to the convention of having a "-request" alias for sending subscribe and unsubscribe messages, not all do. Be sure you know the conventions used by the lists to which you subscribe.

* Save the subscription messages for any lists you join. These usually tell you how to unsubscribe as well.

* In general, it's not possible to retrieve messages once you have sent them. Even your system administrator will not be able to get a message back once you have sent it. This means you must make sure you really want the message to go as you have written it.

* The auto-reply feature of many mailers is useful for in-house communication, but quite annoying when sent to entire mailing lists. Examine "Reply-To" addresses when replying to messages from lists. Most auto-replys will go to all members of the list.

* Don't send large files to mailing lists when Uniform Resource Locators (URLs) or pointers to ftp-able versions will do. If you want to send it as multiple files, be sure to follow the culture of the group. If you don't know what that is, ask.

* Consider unsubscribing or setting a "nomail" option (when it's available) when you cannot check your mail for an extended period.

* When sending a message to more than one mailing list, especially if the lists are closely related, apologize for cross-posting.

* If you ask a question, be sure to post a summary. When doing so, truly summarize rather than send a cumulation of the messages you receive.

* Some mailing lists are private. Do not send mail to these lists uninvited. Do not report mail from these lists to a wider audience.

* If you are caught in an argument, keep the discussion focused on issues rather than the personalities involved.

3.1.3 NetNews Guidelines

NetNews is a globally distributed system which allows people to communicate on topics of specific interest. It is divided into hierarchies, with the major divisions being: sci - science related discussions; comp - computer related discussions; news - for discussions which center around NetNews itself; rec - recreational activities; soc - social issues; talk - long-winded never-ending discussions; biz - business related postings; and alt - the alternate hierarchy. Alt is so named because creating an alt group does not go through the same process as creating a group in the other parts of the hierarchy. There are also regional hierarchies, hierarchies which are widely distributed such as Bionet, and your place of business may have its own groups as well. Recently, a "humanities" hierarchy was added, and as time goes on its likely more will be added. For longer discussions on News see references [2,8,22,23] in the Selected Bibliography.

* In NetNews parlance, "Posting" refers to posting a new article to a group, or responding to a post someone else has posted. "Cross-Posting" refers to posting a message to more than one group. If you introduce Cross-Posting to a group, or if you direct "Followup-To:" in the header of your posting, warn readers! Readers will usually assume that the message was posted to a specific group and that followups will go to that group. Headers change this behavior.

* Read all of a discussion in progress (we call this a thread) before posting replies. Avoid posting "Me Too" messages, where content is limited to agreement with previous posts. Content of a follow-up post should exceed quoted content.

* Send mail when an answer to a question is for one person only. Remember that News has global distribution and the whole world probably is NOT interested in a personal response. However, don't hesitate to post when something will be of general interest to the Newsgroup participants.

* Check the "Distribution" section of the header, but don't depend on it. Due to the complex method by which News is delivered, Distribution headers are unreliable. But, if you are posting something which will be of interest to a limited number or readers, use a distribution line that attempts to limit the distribution of your article to those people. For example, set the Distribution to be "nj" if you are posting an article that will be of interest only to New Jersey readers.

* If you feel an article will be of interest to more than one Newsgroup, be sure to CROSSPOST the article rather than individually post it to those groups. In general, probably only five-to-six groups will have similar enough interests to warrant this.

* Consider using Reference sources (Computer Manuals, Newspapers, help files) before posting a question. Asking a Newsgroup where answers are readily available elsewhere generates grumpy "RTFM" (read the fine manual - although a more vulgar meaning of the word beginning with "f" is usually implied) messages.

* Although there are Newsgroups which welcome advertising, in general it is considered nothing less than criminal to advertise off-topic products. Sending an advertisement to each and every group will pretty much guarantee your loss of connectivity.

* If you discover an error in your post, cancel it as soon as possible.

* DO NOT attempt to cancel any articles but your own. Contact your administrator if you don't know how to cancel your post, or if some other post, such as a chain letter, needs canceling.

* If you've posted something and don't see it immediately, don't assume it's failed and re-post it.

* Some groups permit (and some welcome) posts which in other circumstances would be considered to be in questionable taste. Still, there is no guarantee that all people reading the group will appreciate the material as much as you do. Use the Rotate utility (which rotates all the characters in your post by 13 positions in the alphabet) to avoid giving offense. The Rot13 utility for Unix is an example.

* In groups which discuss movies or books it is considered essential to mark posts which disclose significant content as "Spoilers". Put this word in your Subject: line. You may add blank lines to the beginning of your post to keep content out of sight, or you may Rotate it.

* Forging of news articles is generally censured. You can protect yourself from forgeries by using software which generates a manipulation detection "fingerprint", such as PGP (in the US).

* Postings via anonymous servers are accepted in some Newsgroups and disliked in others. Material which is inappropriate when posted under one's own name is still inappropriate when posted anonymously.

* Expect a slight delay in seeing your post when posting to a moderated group. The moderator may change your subject line to have your post conform to a particular thread.

* Don't get involved in flame wars. Neither post nor respond to incendiary material.

3.2 Administrator Guidelines

3.2.1 General Issues

* Clarify any policies your site has regarding its subscription to NetNews groups and about subscribing to mailing lists.

* Clarify any policies your site has about posting to NetNews groups or to mailing lists, including use of disclaimers in .sigs.

* Clarify and publicize archive policy. (How long are articles kept?)

* Investigate accusations about your users promptly and with an open mind.

* Be sure to monitor the health of your system.

* Consider how long to archive system logs, and publicize your policy on logging.

3.2.2 Mailing Lists

* Keep mailing lists up to date to avoid the "bouncing mail" problem.

* Help list owners when problems arise.

* Inform list owners of any maintenance windows or planned downtime.

* Be sure to have "-request" aliases for list subscription and administration.

* Make sure all mail gateways operate smoothly.

3.2.3. NetNews

* Publicize the nature of the feed you receive. If you do not get a full feed, people may want to know why not.

* Be aware that the multiplicity of News Reader clients may cause the News Server being blamed for problems in the clients.

* Honor requests from users immediately if they request cancellation of their own posts or invalid posts, such as chain letters.

* Have "Usenet", "Netnews" and "News" aliased and make sure someone reads the mail.

3.3 Moderator Guidelines

3.3.1 General Guidelines

* Make sure your Frequestly Asked Questions (FAQ) is posted at regular intervals. Include your guidelines for articles/messages. If you are not the FAQ maintainer, make sure they do so.

* Make sure you maintain a good welcome message, which contains subscribe and unsubscribe information.

* Newsgroups should have their charter/guidelines posted regularly.

* Keep mailing lists and Newsgroups up to date. Post messages in a timely fashion. Designate a substitute when you go on vacation or out of town.

4.0 Information Services (Gopher, Wais, WWW, ftp, telnet)

In recent Internet history, the 'Net has exploded with new and varied Information services. Gopher, Wais, World Wide Web (WWW), Multi-User Dimensions (MUDs) Multi-User Dimensions which are Object Oriented (MOOs) are a few of these new areas. Although the ability to find information is exploding, "Caveat Emptor" remains constant. For more information on these services, check references [14,28] in the Selected Bibliography.

4.1 User Guidelines

4.1.1. General guidelines

* Remember that all these services belong to someone else. The people who pay the bills get to make the rules governing usage. Information may be free - or it may not be! Be sure you check.

* If you have problems with any form of information service, start problem solving by checking locally: Check file configurations, software setup, network connections, etc. Do this before assuming the problem is at the provider's end and/or is the provider's fault.

* Although there are naming conventions for file-types used, don't depend on these file naming conventions to be enforced. For example, a ".doc" file is not always a Word file.

* Information services also use conventions, such as www.xyz.com. While it is useful to know these conventions, again, don't necessarily rely on them.

* Know how file names work on your own system.

* Be aware of conventions used for providing information during sessions. FTP sites usually have files named README in a top level directory which have information about the files available. But, don't assume that these files are necessarily

up-to-date and/or accurate.

* Do NOT assume that ANY information you find is up-to-date and/or accurate. Remember that new technologies allow just about anyone to be a publisher, but not all people have discovered the responsibilities which accompany publishing.

* Remember that unless you are sure that security and authentication technology is in use, that any information you submit to a system is being transmitted over the Internet "in the clear", with no protection from "sniffers" or forgers.

* Since the Internet spans the globe, remember that Information Services might reflect culture and life-style markedly different from your own community. Materials you find offensive may originate in a geography which finds them acceptable. Keep an open mind.

* When wanting information from a popular server, be sure to use a mirror server that's close if a list is provided.

* Do not use someone else's FTP site to deposit materials you wish other people to pick up. This is called "dumping" and is not generally acceptable behavior.

* When you have trouble with a site and ask for help, be sure to provide as much information as possible in order to help debug the problem.

* When bringing up your own information service, such as a homepage, be sure to check with your local system administrator to find what the local guidelines are in affect.

* Consider spreading out the system load on popular sites by avoiding "rush hour" and logging in during off-peak times.

4.1.2 Real Time Interactive Services Guidelines (MUDs MOOs IRC)

* As in other environments, it is wise to "listen" first to get to know the culture of the group.

* It's not necessary to greet everyone on a channel or room personally. Usually one "Hello" or the equivalent is enough. Using the automation features of your client to greet people is not acceptable behavior.

* Warn the participants if you intend to ship large quantities of information. If all consent to receiving it, you may send, but sending unwanted information without a warning is considered bad form just as it is in mail.

* Don't assume that people who you don't know will want to talk to you. If you feel compelled to send private messages to

people you don't know, then be willing to accept gracefully the fact that they might be busy or simply not want to chat with you.

* Respect the guidelines of the group. Look for introductory materials for the group. These may be on a related ftp site.

* Don't badger other users for personal information such as sex, age, or location. After you have built an acquaintance with another user, these questions may be more appropriate, but many people hesitate to give this information to people with whom they are not familiar.

* If a user is using a nickname alias or pseudonym, respect that user's desire for anonymity. Even if you and that person are close friends, it is more courteous to use his nickname. Do not use that person's real name online without permission.

4.2 Administrator Guidelines

4.2.1 General Guidelines

* Make clear what's available for copying and what is not.

* Describe what's available on your site, and your organization. Be sure any general policies are clear.

* Keep information, especially READMEs, up-to-date. Provide READMEs in plain ascii text.

* Present a list of mirrors of your site if you know them. Make sure you include a statement of copyright applicable to your mirrors. List their update schedule if possible.

* Make sure that popular (and massive) information has the bandwidth to support it.

* Use conventions for file extensions - .txt for ascii text; .html or .htm for HTML; .ps for Postscript; .pdf for Portable Document Format; .sgml or .sgm for SGML; .exe for non-Unix executables, etc.

* For files being transferred, try to make filenames unique in the first eight characters.

* When providing information, make sure your site has something unique to offer. Avoid bringing up an information service which simply points to other services on the Internet.

* Don't point to other sites without asking first.

* Remember that setting up an information service is more than just design and implementation. It's also maintenance.

* Make sure your posted materials are appropriate for the supporting organization.

* Test applications with a variety of tools. Don't assume everything works if you've tested with only one client. Also, assume the low end of technology for clients and don't create applications which can only be used by Graphical User Interfaces.

* Have a consistent view of your information. Make sure the look and feel stays the same throughout your applications.

* Be sensitive to the longevity of your information. Be sure to date time-sensitive materials, and be vigilant about keeping this information well maintained.

* Export restrictions vary from country to country. Be sure you understand the implications of export restrictions when you post.

* Tell users what you plan to do with any information you collect, such as WWW feedback. You need to warn people if you plan to publish any of their statements, even passively by just making it available to other users.

* Make sure your policy on user information services, such as homepages, is well known.

5.0 Selected Bibliography

This bibliography was used to gather most of the information in the sections above as well as for general reference. Items not specifically found in these works were gathered from the IETF-RUN Working Group's experience.

The Net Abuse FAQ

Last Updated: Sunday, June 29, 1997

NOTE: Parts of this FAQ may be out of date. Please send me any
suggestions or corrections.

The most frequently asked question is always "Who do I complain to about
this?"
Please see sections 3.8 through 3.12 for answers.

If you read no other part of this FAQ, read section 3.21.

POLITICS

1.1) What are the news.admin.net-abuse groups, and why were they
created?
1.2) (this section has been merged into 1.1)
1.3) What is net-abuse?
1.4) What is the purpose of this FAQ?
1.5) What questions does it leave unanswered?
1.6) Who's responsible for this FAQ?
1.7) Where can I get it?
1.8) Is this the only Net Abuse FAQ?
1.9) I don't understand a word of this.

SPAM, SPAMMERS, and MOOSES

2.1) What is Spam?
2.2) What is Excessive Multi-Posting (EMP)?
2.3) What about cross-posting?
2.4) Where did the term come from?
2.5) Tell me about the Great Spammers.
2.6) Who were Canter and Siegel?
2.7) Where can I get more info on them?
2.8) What should we do about the book?
2.9) Who is Cancelmoose
2.10) Who are the current spam cancellers?

NITTY-GRITTY

3.1) Yeah, but how many times is 'X'?
3.2) What is the Breidbart Index (BI)?
3.3) What is NoCeM?
3.4) Is there a blacklist of net-abusers?
3.5) How can I tell if a post is forged?
3.6) How do I know when I've got spam on my hands?
3.7) My group is full of crap. Why isn't it being cancelled?
3.8) OK, I think I've spotted a spam. Who should I mail-bomb?
3.9) OK, I think I've spotted a spam. What should I do?
3.10) What about e-mail spam?
3.11) I e-mailed a complaint to {so-and-so} about their {e-mail,
post} and now they're threatening to complain to my system
administrator. What should I do?
3.12) List of Basic Adminstrative Addresses
3.13) What's a cancel-bot?
3.14) Where can I get me one?
3.15) How do spam-cancellers cancel spam?
3.16) Can I sic The Man on these MAKE.MONEY.FAST losers (or other
types of net abusers)?
3.17) What is a killfile, and how do I use one?
3.18) How do I killfile all crossposted messages?
3.19) What is the Usenet Death Penalty (UDP)?
3.20) Do all hierarchies have the same rules?

3.21) How about we start a campaign to stop all the spammers?

GROAN

4.1) Why are you net-abuse people such net-cops?
4.2) Isn't cyberporn a bigger issue than spamming?
4.3) Hey, I think my newsgroup is being invaded by
alt.syntax.tactical!
4.4) Hey, I think my newsgroup is being invaded by the Usenet
Freedom Council!
4.5) Hey, somebody posted an ad in {newsgroup}!
4.6) Hey, so-and-so's not being nice in {newsgroup}!
4.7) Hey, the Good Times virus--
4.8) Hey, there's this (AT&T, Jerry Garcia, whatever) banner
message in the newsgroup descriptions!
4.9) Hey, one of those net.cops posted an ad for {something}! Haw!
Haw!

-

POLITICS

1.1) What are the news.admin.net-abuse groups, and why were they created?

Originally, news.admin.net-abuse.misc was created to replace
alt.current-events.net-abuse and news.admin.policy. The former was
one of the most widely read and respectable alt.* groups, while
the latter had become largely a mess of messages cross-posted from
a.c-e.n-a and news.admin.misc.

news.admin.net-abuse.misc was then, not surprisingly, for
discussions of net-abuse (see "What is net-abuse", below):
definitions, occurances, objections, complaints, battle plans,
peace plans, etcetera.

As you can guess, that generated amazing amounts of traffic. By
early 1996, it had gotten to the point where it was impossible to
keep up with the group without investing hours and hours of time.

In November of 1996, after many months of hard work from Tim
Skirvin and others, the news.admin.net-abuse.* groups were
reorganized. The charters are stored at:

http://www.uiuc.edu/ph/www/tskirvin/nana

1.3) What is net-abuse?

Since the newsgroup's inception, many curious forms of Usenet
behavior have been discussed on it. Of these, spam is the one most
universally accepted as 'net-abuse', which is why it gets its own
section below. Other Frequently Aired Complaints are discussed
throughout the FAQ.

However, as Neil Pawson says, "it's for abuse *of* the net, NOT abuse *on* the net." Just because somebody does something vile, we don't necessarily want to hear about it on n.a.n-a. To qualify as true panic-inspiring net-abuse, an act must interfere with the net-use of a large number of people. Examples of this: newsgroup flooding, widespread or organized forgery campaigns, widespread or organized account hackery, widespread or organized censorship attempts...

1.4) What is the purpose of this FAQ?

This FAQ is *not* intended as a comprehensive guide to netiquette. That is covered in RFC 1855. Many things that this FAQ appears to treat lightly are, in fact, extreme breaches of netiquette. The FAQ primarily attempts to answer: are these situations "net-abuse", in the sense that the whole world should hear about them?

1.5) What questions does the FAQ leave unanswered?

An infinite number, featuring:

* What to do about e-mail spam (coming soon)
* Who are the current net-abuse villains? or, Who is Jeff Slaton? or etc... (not really my bag--instead, see "Is there a blacklist of net-abusers?" below)

I'd also love to have a section on network/address tracking and informational tools (telnet, traceroute, nslookup, etc.) a la "The Spam-tracker's Handbook". Whatever happened to that?

Anyways, feel free to contribute whole new entries.

Perhaps some of the other net-abuse-related FAQs can be wholly dumped into this one. -- J.D.

1.6) Who's responsible for this FAQ?

It's currently maintained by J.D. Falk (jdfalk@cybernothing.org), and was originally maintained by by Scott Southwick (scotty@bluemarble.net). The information has been gleaned from various Usenet sources --primarily posts to the net-abuse groups made by a wide variety of authors-- and so the maintainer must actively disclaim all responsibilty for the veracity, advisability and/or legality of anything contained in the FAQ. Thanks to the following people who have contributed to it, or at least discussed its contents in a non-threatening manner:

Arthur Byrne, Pekka Pirinen, Keith "Justified and Ancient" Cochran, Lamont Granquist, Victoria "Support Wench" Fike, Steve Patlan, Wilf Leblanc, Seth Cohn, Neil Pawson, Bram Cohen, Mitchell Golden, Rahul Dhesi, Stephen Boursy, Mary Branscombe, David Cortesi, Alexander Lehmann, Greg Lindahl, Jack Hamilton, Morten Welinder, Axel Boldt, Richard Lee, an48985, Phil Pfeiffer, John van Essen, Pierre Beyssac, Michael Shields, Travis Corcoran, Tim

Skirvin, Chris Lewis, Daniel J. Barrett, Ricardo H. Gonzalez, Dave Hayes, Ed Falk (no relation), Nathan J. Mehl, Peter Kappesser, Robert Braver, Loy Ellen Gross, booter, Johann Beda, Shaun Davis-Gluyas, and several others we have undoubtedly missed.

Contributions are always warmly welcomed, as are suggestions, corrections and criticism. However, you know where to shove the flames.

1.7) Where can I get it?

This FAQ will be posted thrice monthly (on the 1st, 11th, and 21st) to news.admin.net-abuse.*, news.admin.misc, news.groups.questions, and news.answers. It will also be available by anonymous ftp from rtfm.mit.edu and its mirror sites. The master hypertext version is available at:

http://www.cybernothing.org/faqs/net-abuse-faq.html

1.8) Is this the only Net Abuse FAQ?

Unfortunately, the topic of Net Abuse is so vast and so controversial that it cannot be covered completely in one document.

Of course, that didn't stop Daniel Barrett from trying, and doing a very good job. He wrote a book (published by O'Reilly Publishing) with the unfortunate but fitting title of Bandits on the Information Superhighway. More information is available at:

http://www.ora.com/item/bandits.html

I've removed much of the rest of this list, because Stan Kalisch III is doing a much better job of keeping his list of news.admin.net-abuse.* Newsgroups' Documents updated. You can view it at:

http://www.crl.com/~sjkiii/news-admin-net-abuse.html, or
ftp://ftp.crl.com/users/sj/sjkiii/pub/usenet/news-admin-net-abuse.txt

For an almost totally different viewpoint, see Dave Hayes's long-awaited document, "An Alternative Primer on Net Abuse, Free Speech, and Usenet," which at first denied the existence of this FAQ. You can find it and some related documents at:

http://www.jetcafe.org/~dave/usenet/

My answer to Dave's Alternative Primer is also worth reading:

http://www.cybernothing.org/faqs/dave-hayes.html

Then again, there's Ricardo H. Gonzalez's Introduction to news.admin.net-abuse.misc, which is unofficial in the sense that most of the people who really know what they're talking about when it comes to Net Abuse have pointed out glaring errors in that

document, and he doesn't seem to care. For the most part, it is his own opinion (most FAQs try to be as factual as possible, or at least show a number of different opinions.) It also makes many references to a fictional "autocyberretromoderation bot," which will supposedly cancel any messages posted to news.admin.net-abuse.misc which do not fit some unknown secret criteria determined by some unknown secret cabal.

The truth is, there is an ANTI-cancellation bot active on news.admin.net-abuse.misc -- any time a message in that newsgroup is cancelled, "Dave the Ressurector" will repost it, no matter who issued the cancel message. However, Mr. Gonzales does not believe this to be true, no matter how many times the evidence is presented.

If you wish to read his viewpoint, the document may still be at:

http://www.paranoia.com/~ricardo/faq.html

After reading that, I'd highly suggest taking a look at Fluffy's response:

http://www.macconnect.com/~fluffy/faqs/rgfaq.html

There are a number of very good indices of net abuse-related documents:

Fight Spam on the Internet! (Scott Hazen Mueller)
http://www.vix.com/spam/

news.admin.net-abuse.* homepage (Tim Skirvin)
http://www.math.uiuc.edu/~tskirvin/home/nana/

MaasInfo/Other/NetAbuse (Robert E. Maas)
http://NCTUCCCA.Edu.Tw/documents/Internet/MaasInfo/Other/NetAbuse.html

1.9) I don't understand a single word of this.

One of the best starting places for learning about Usenet is Indiana University's Usenet Resources page, at:

http://scwww.ucs.indiana.edu/NetRsc/usenet.html

[Scotty put that together at his old job, but doesn't maintain it any more.] It's got links to most Usenet primers, netiquette documents and news FAQs, Son-of-RFC-1036, some charters, newsreader man pages, etcetera.

SPAM, SPAMMERS, and MOOSES

2.1) What is Spam?

It's a luncheon meat, kinda pink, comes in a can, made by Hormel. Most Americans intuitively, viscerally associate "Spam" with "no

nutritive or aesthetic value." The luncheon meat has its own newsgroup, alt.spam.

The term "spam," as used on this newsgroup, means "the same article (or essentially the same article) posted an unacceptably high number of times to one or more newsgroups." CONTENT IS IRRELEVANT. 'Spam' doesn't mean "ads." It doesn't mean "abuse." It doesn't mean "posts whose content I object to." Spam is a funky name for a phenomenon that can be measured pretty objectively: did that post appear X times? (See 3.1, "Yeah, but how many is X?')

There have been "customized" spams--where each post made some effort to apply to each individual newsgroup, but the general thrust of each article was the same. A huge straw poll on news.admin.policy, news.admin.misc, and a.c-e.n-a (December 1994) showed that as many of 90% of the readers felt that cancellations for these posts were justified. So, simply put: if you plan to post the same or extremely similar messages to dozens of newsgroups, the posts are probably going to get cancelled.

If you feel that a massive multi-post you are planning constitutes an exception, you are more than welcome to run the idea past the readers of news.admin.net-abuse.misc for feedback first.

2.2) What is Excessive Multi-Posting (EMP)?

Spam (and spam by any other name still stinks.)

Some people feel that "spam" is an inappropriately misleading name for messages of this type. Others feel that "EMP" is misleading. Since spam is the most widely recognized term, that's what we use in this FAQ.

2.3) What about cross-posting?

Here's the difference between cross-posting and multi-posting: cross-posting is where you list all the groups on the Newsgroups: line of a single post. Multi-posting is where you have some idiotic program fire an individual copy of the post to each group. (If you do it manually, that's even more idiotic.) A cross-post only takes up the space of 1 post (one on every newsserver in the world), no matter how many groups; multi-posting takes up the space of dozens or hundreds of posts (on every newsserver in the world), which is why it infuriates so many people.

So, cross-posting is better than multi-posting. It's still very often a bad idea, and if you get carried away it'll still get cancelled (see 3.2, "What is the Breidbart Index (BI)?")

If you *must* cross-post, set the followups to a single appropriate group by adding a header line like:

Followup-to: group.name.here

This prevents the readers of all the groups from having to deal with the thread for weeks afterwards if the readers of only one or two of the groups take an interest in it.

You can also add Followup-to: poster, which will (in most newsreaders) ask anybody who tries to follow up to e-mail you instead.

2.4) Where did the term 'Spam' come from?

The prevailing theory is that it is from the song in Monty Python's famous spam-loving vikings sketch that goes, roughly, "Spam spam spam spam, spam spam spam spam, spam spam spam spam..." The vikings would sing this over and over, rising in volume until it was impossible for the other characters in the sketch to converse (which was, of course, a large part of the joke.)

The term is rumored to have originated, as far as the Internet is concerned, from the MUD/MUSH community. Nathan J. Mehl, newsadmin for BBN Planet, tells the most reliable story known to date...

Well, briefly summarized:

My friend-who-shall-remain-nameless was, ah, a younger and callower man, circa 1985 or so, and happened onto one of the original Pern MUSHes during their most Sacred Event -- a hatching. After trying to converse sanely with two or three of the denizens, he came quickly to the conclusion that they area all of bunch of obsessive-compulsive nitwits with no life and less literary taste. (Probably true.)

So, as the 'eggs' were 'hatching', he assigned a keyboard macro to echo the line:

SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM

...and proceeded to invoke it once every couple of seconds, until one of the wizards finally booted him off.

...which would have probably been that last that anyone ever heard or thought of it, except that it apparently ingrained itself into the memory of the PernMUSHers, and forever after there was the legend of 'that asshole who spammed us.'

Every once in a while, this story makes it back to my friend, and he tries very hard to keep a straight face...

Another theory is related to throwing a "brick" of the luncheon meat at a rotating metal fan. However, none of the long-time "spam watchers" have any idea where that theory was from before it

showed up in a Time magazine article.

The term wasn't first used to describe mass news posting, however. See the Hacker's Jargon File for previous uses of the word.

2.5) Tell me about the Great Spammers.

To paraphrase Yoda, spam does not make one great. However, a surprising number of people prefer infamy to obscurity, and would rather be hated than unknown. Some of those people take up spamming as a way to gain the notoriety that their warped psyches crave.

So as not to duplicate effort, here's an excellent archive devoted to the various bug- and honey-bears of the Net:

* The Kook of the Month site (particularly the Net.Legends FAQ)
http://www.wetware.com/mlegare/kotm/KotM.html
* The Net.Legends FAQ (html version)
http://www.uiuc.edu/ph/www/tskirvin/legends.html

Not all of the kooks and legends discussed there are spammers, or even villains. Spam fans should pay particular attention to the entries on Serdar Argic, the spiritual ancestor of today's spammers.

2.6) Who were Canter and Siegel?

Unfortunately, it's "Who *are* Canter and Siegel?" They're lawyers, authors, and Usenet newbies _par excellence_. Super-newbies. Honorary Permanent Newbies. When they sit around the net, they sit *around the net*...

C+S weren't the first spammers, but they were so gothically clumsy about it, and so intent on making a buck, that people were terrified and infuriated into starting alt.current-events.net-abuse (which has since been replaced by the news.admin.net-abuse.* groups.

2.7) Where can I get more information about them?

The best archive of Canter and Siegel-related postings is maintained by C&S themselves; last time somebody checked with "ls -r", the fun-loving net.lawyers seemed to be storing every post that mentioned them (can you say "grepping for libel cases"?) It's worth noting that to date nobody has been sued by them for anything net-related, and probably not for anything else either.

If you're not C or S yourself, though, the next best info source is Thomas Leavitt's "The Canter & Siegel Report," available via anonymous ftp from:

ftp://ftp.armory.com/pub/user/leavitt/

Those files are zipped. Users with access to 1990s technology should check out the WWW versions at:

ftp://ftp.armory.com/pub/user/leavitt/html/cands.report.html
ftp://ftp.armory.com/pub/user/leavitt/html/candsrpt.two.html
ftp://ftp.armory.com/pub/user/leavitt/html/candsrpt.three.html

There's also a wonderful article on the pair available at:

http://www.eye.net/Howling/Kooks/Kreeps/CS2.htm
(apparently now an invalid link; anybody know where it went?)

Many, many more docs are available, but I'll stop there, because there's really no reason to dwell on the past. In fact, Canter & Siegel have both posted to news.admin.net-abuse.misc and other groups from time to time (always multiposted -- they seem genetically unable to crosspost), and it has always been quite obvious that all they wanted was to generate more publicity for themselves.

2.8) What should we do about the book?

What book?

2.9) Who is Cancelmoose[tm]?

Cancelmoose[tm] is, to misquote some wise poster, "the greatest public servant the net has seen in quite some time." Once upon a time, the moose would send out spam-cancels and then post notice anonymously to news.admin.policy, news.admin.misc, and a.c-e.n-a. The Moose stepped to the fore on its own initiative, at a time (mid 1994) when spam-cancels were irregular and disorganized, and behaved altogether admirably-- fair, even-handed, and quick to respond to comments and criticism, all without self-aggrandizement or martyrdom. Cancelmoose[tm] quickly gained near-unanimous support from the readership of all three above-mentioned groups.

Nobody knows who Cancelmoose[tm] really is, and there aren't even any good rumors. However, the moose now has an e-mail address (moose@cm.org) and a web site (http://www.cm.org.)

By early 1995, several others had stepped into the spam-cancel business, and appeared to be comporting themselves well, after the Moose's manner. The moose has now gotten out of the business, and is more interested in ending spam (and cancels) entirely (see "What is NoCeM?")

2.10) Who are the current spam cancellers?"

Chris Lewis and Robert Braver take care of most of the spam (John Milburn has retired from the spam-cancelling biz), while Richard Depew cleans up spews from horribly misconfigured news servers, large misplaced binaries, and the like. Somebody calling himself The Unknown News Administrator has been helping as well, and so

have a few others. Michael Scheidell and others deal with problems (usually out-of-area postings) in various local hierarchies.

Overall, Chris Lewis is considered to be the expert on spam cancelling, and one of the experts on Usenet in general.

For a good overview of who's doing what right now, hop over to news.admin.net-abuse.bulletins and check headers.

NITTY-GRITTY

3.1) Yeah, but how many times is 'X'?

How many posts does it take to push the spam envelope? To use up all your spam charity points? For a bare-bones spam? To trigger the raging-spam-cancellers-from-Hell?

Among those who agree that spam should be defined solely by quantity,

----------> 20 <----------

appears to be the magic number, or at least a number so middle-of-the-road that it provokes very little passionate dissent in either direction. Notably, Cancelmoose[tm] refuses to set a firm number, in the belief that people would simply post [X-1] messages. It's safe to say that a couple incidents of 19-post spams would cause the magic number to plummet. Thus, 20 should be considered a vague approximation only.

Passionately dissenting note: Rahul Dhesi [dhesi@rahul.net], one of the fathers of the cancel-bot movement, sticks by the following definition:

More than five physically distinct postings with substantially identical content posted within a period of ten days.

The most reliable document describing current spam thresholds and guidelines is a draft FAQ posted weekly to news.admin.net-abuse.misc by Chris Lewis. It also describes the Breidbart Index (see below) in greater detail. That FAQ is not now available on the web at:

http://www.vix.com/spam/others/thresholds.html

3.2) What is the Breidbart Index (BI)?

The Breidbart Index (BI) is a measure of the breadth of any multi-posting, cross-posting, or combination of the two. BI is defined as the sum of the square roots of how many newsgroups each article was posted to. If that number approaches 20, then the posts will probably be cancelled by somebody.

For instance, four identical posts to nine newsgroups each (4 times 3) has a BI of 12. However, nine identical posts to four newsgroups each (9 times 2) has a BI of 18.

3.3) What is NoCeM?

NoCeM is an end to all this spam, and an end to all this cancelling. With NoCeM (pronounced "No See 'Em"), your newsreader goes out and gets certain posts (from trusted parties) that contain lists of junk articles (ECP, spam, etc.) Your newsreader then hides those articles from you.

Note that right now most NoCeM newsreaders are only for Unix. The only exception is Gnus, the newsreader for EMACS, which will work on any platform that supports a fully functioning version of GNU EMACS.

The move to NoCeM is headed by the Cancelmoose[tm] (moose@cm.org), and the moose's web site has all the info you might want about NoCeM:

http://www.cm.org/

Also check out the newsgroup alt.nocem.misc, which will degenerate into a Big 7 newsgroup (news.lists.nocem?) one of these days.

3.4) Is there a blacklist of net-abusers?

Yes, Axel Boldt maintains the world-renowned "Blacklist of Internet Advertisers" at:

http://math-www.uni-paderborn.de/~axel/BL/blacklist.html

Now, before you get really worried about McCarthyism and such, go and look at Axel's self-imposed rules for maintaining the blacklist. He's much fairer than most of those people deserve.

3.5) How can I tell if a post is forged?

Gandalf (gandalf@digital.net) has written the alt.spam FAQ, or "Figuring out fake E-Mail & Posts," which focuses on how to track spam. It is available at:

http://digital.net/~gandalf/spamfaq.html

For a rough article on forgery, originally constructed for this FAQ out of information contributed by Robert Bonomi, Arthur Byrne, Emma Pease, and Alan Bostick, see:

http://sckb.ucssc.indiana.edu/kb/data/all.afco.html

For more information on headers, see RFC-1036, "Standard for Interchange of Usenet Messages," at:

http://www.cis.ohio-state.edu/htbin/rfc/rfc1036.html

3.6) How can I tell how many newsgroups an article was posted to?

For people who can't use the classic "grepping the newsspool" method, nn or nngrab may be able to help. (The following is adapted from a posting by Lee Rudolph--thanks.)

You can force the Unix newsreader nn to ignore your .newsrc and create a "merged newsgroup" consisting only of articles containing a certain word in their subject line. For instance, to gather all articles at your site containing the word "spam" in their subject line, use this command:

% nngrab spam

That's basically a faster version of

% nn -i -s"spam" -mXx

Caution: this latter method can be a long, tedious process. See the nn man page for more details.

3.7) My group is full of crap. Why isn't it being cancelled?

Lots of groups are full of inappropriate posts, widely crossposted advertising, and so forth -- just pop into misc.misc or alt.sex for as many examples as you can possibly handle.

As annoying as it may be, these posts may not be cancellable spam. Keep in mind that the cancel thresholds err in the favor of the excessive poster, and still leave *lots* of room to post in a manner that most people find inappropriate.

A single, excessively crossposted post can not be cancellable in and of itself. In order for a single post to be cancelled, it would have to be posted to 400 groups (sqrt(400) = 20). This is not possible due to limits of news software.

Robert Braver reports "When checking for spam, I often must pass over groups of messages that are likely considered off-topic intrusions in each of the newsgroups it is posted to, but it doesn't hit the cancel threshold."

One good solution here would be for the newsadmins of a particular locality to come to a consensus for more stringent thresholds for their respective local hierarchies, as has been done in the atl.* and fl.* hierarchies.

Of course, the messages may actually be cancellable spam, especially when you consider the current 45-day window. But, this type can be harder for the automatic spam detectors to find.

Once a slow spam is detected and posted to news.admin.net-abuse.announce, it makes it easier to keep tabs on a particular poster or series of messages in the future. This kind of spam is probably where "field reports" to news.admin.net-abuse.misc are the most useful.

3.8) OK, I'm certain it's spam. Who should I mail-bomb?

Don't mail-bomb anybody. Harrassment is illegal everywhere. If somebody's done something truly evil, they'll get enough single responses from individuals to achieve the same effect.

3.9) OK, I'm certain it's spam. What should I do?

* Check n.a.n-a.sightings. If somebody's already made a definitive spotting, there's no sense in an "I've seen it, too" post.

* Include a *complete* header from one copy of the spam in your post to n.a.n-a.sightings. Set followups to n.a.n-a.misc.

* Say how many newsgroups at your site it was posted to; list 20 or more of them. (See "How do I know how many newsgroups an article was posted to?")

* Complain politely to the spammer and the Usenet administrator at the spammer's site (whose address should be "usenet@site.name" or "news@site.name"; if that fails, try "abuse" or "postmaster".) Request that the Usenet administrator post a response to n.a.n-a.announce, detailing what actions have been taken. Again, remember to be polite -- it is rare that the administrators are in any way responsible for the message.

3.10) What about e-mail spam?

You can always complain about unsolicited e-mail to both the bozo that sent it to you and the bozo's postmaster. To write to a postmaster, just substitute the perp's username in their address (e.g., bozo@otherwise.lovely.com) with "postmaster" (i.e., postmaster@otherwise.lovely.com.) Please be brief and polite with the postmasters, include a copy of the e-mail you received, and leave the subject-line intact (in case the postmaster wants to set up an auto-responder.)

Be sure to include all the headers (not just From, To, Date, and Subject, which is the default in most mail programs) in your reply, just in case the e-mail was cleverly forged. That way, the postmaster can trace it back to its source if necessary.

3.11) I e-mailed a complaint to so-and-so about their {post, mail}, and now they're threatening to complain to my system administrator. What should I do?

Let your sys-admin know right away what's happening. Tell them the story, briefly. Offer to supply the post(s) in question, so that your admin doesn't have to go searching. Then keep them updated on any further threats.

If you're brief, polite, and on the right side, you can usually find an ally in your sys-admin.

3.12) List of Basic Administrative Addresses

The search for the best person to complain to at any site has led to much speculation and arguments, even among admins at the same site. However, if a message to the original poster doesn't get you anywhere, somebody at one of the following addresses might be able to help.

abuse
A lot of ISP's and network backbones have created 'abuse' addresses for complaints about net-abuse. That's usually the best place to start.

usenet or news
For Usenet abuse, you can usually reach a news administrator through one or both of these addresses. A notable exception is Compuserve, which utilizes the address <usemail@csi.compuserve.com>.

postmaster
RFC 822, the document which set most of the current standards for Internet e-mail back in 1982, makes it mandatory for all sites which pass e-mail to have a postmaster address so that problems can be reported. The purpose of postmaster has expanded at many sites to include net-abuse, both e-mail and otherwise.

Administrative or Technical Contacts
If you have access to the whois command, you can type (for example) 'whois example.com' to find out who the administrative and technical contacts are for a domain. This will list their e-mail address, and often their phone and FAX numbers (but remember, be polite, because the contacts aren't usually responsible for their users' misbehavior, and harassment is illegal everywhere.)

Upstream Providers
If none of the above get you anywhere, you can try going to a site's upstream providers. For news, check the Path: header of the original message. To the right, you'll see the originating site. Each site between you and them is separated by an exclamation point, as in the partial example below:

!dummy-host.example.com!nohost.mydomain.com!not-for-mail

As you can see, the message originated at the machine foobar.mydomain.com. The next news hop is dummy-host.example.com, so you'd complain to news@example.com if the admins at mydomain.com were uncooperative.

For e-mail, determining who's upstream can often be confusing -- many people get it wrong. Unless you're familiar with the whois and traceroute tools, I'd suggest not even bothering.

NEW: now you can send mail to domain.name@abuse.networks.net, and it will (probably) be sent to the appropriate contact for that

domain. Be advised that this is a wholly experimental service.

3.13) What is a cancel-bot?

First off, "cancel-bot" is an unfortunate misnomer, and one that the conventional media have understandably misunderstood. "Bot" implies that something is out there, running unattended, cancelling whatever meets its nefarious qualifications...but that is quite rare, and is only done when both the user and their administrators are completely unwilling to stop spamming. For the most part, all spam-cancels are sent out manually and deliberately by actual human beings. (They happen to use a program that is commonly referred to as a "cancel-bot".)

A cancel-bot, misnomer aside, is a program that sends out cancel messages; you feed it the message-IDs of posts, and it sends out a cancel message for each one (see RFC 1036.) Cancel messages are normally sent out by a newsreader in response to a user's request to cancel a message, using a newsreader command, *if* the user was also the original poster of the message. Sites will ignore cancel messages that don't appear to come from the original poster. Cancel-bots work around this restriction by using header lines that make it look like the original poster sent out the cancel; they'll usually add something like a "Cancelled-By" header line as well, to keep things nominally above-board.

Use of a cancel-bot against anything besides 'consensus spam' outrages people, as it should. See alt.religion.scientology for sample discussions.

For more information on cancels (especially in regards to net abuse), Tim Skirvin has written a very good FAQ, available at:

http://www.uiuc.edu/ph/www/tskirvin/cancel.faq

3.14) Where can I get me a cancel-bot?

If you have to ask, you should probably wait a while. ;}

3.15) How do the spam-cancellers cancel spam?

* They make bloody sure they know how to use their cancel-bot;
* They confirm the spam themselves;
* They announce their action to n.a.n-a.announce. This prevents everyone from waiting around and wondering whether anyone's done anything.

Here's a standard section from a cancel-notification post by the beloved Cancelmoose(TM):

The $alz cancel. and Path: cyberspam conventions were followed. [The $alz convention is to create your cancel message-ID by prepending 'cancel.' to the original one. The cyberspam convention is to use- 'Path:

cyberspam!usenet' so that sites that do not want your
cancels can easily opt out. Please use these when
cancelling spam.]

3.16) Can I sic The Man on these MAKE.MONEY.FAST losers (or other types of net abusers)?

You can complain about e-mail or Usenet pyramid schemes (at least those involving Americans somehow) to the FTC:

STAFF CONTACT: Bureau of Consumer Protection
Ms. Broder
bbroder@ftc.gov

Before doing so, consider seriously whether you actually want to encourage government intervention. The number of 'net cases the FTC has been involved in is very low at this point; in an ideal world, it would probably remain that way.

But if you really want to go after MMF lusers (or anybody spammy any type of tax fraud scheme), you can complain to the IRS:

] Subject: Reporting MMF to the IRS [long]
] Date: 11 Mar 1997 09:26:20 -0500
] Reply-To: Inspector Andrew Fried
]
] Over the past six months, my email address has appeared in the "fraud
] killer list", a list of agency contacts used to report potential tax
] fraud violations by the "make money fast" (MMF) Usenet spammers. Since
] complaints such as those don't fall under my specific area of
] jurisdiction, I have been manually forwarding all such messages to the
] appropriate department within my agency.
]
] In order to facilitate routing complaints to the IRS via email, I have
] established two special mailboxes. Email sent to those addresses will
] be automatically forwarded to the correct organizations within the
] Service. This will assure faster delivery and reduce congestion on
] my personal email account. The addresses are as follows:
]
] net-abuse@nocs.insp.irs.gov
] Use this address to report make money fast (MMF) schemes. Mail sent to
] this address will be forwarded to the Criminal Investigation Division
] (CID) for appropriate action.
]
] hotline@nocs.insp.irs.gov
] Mail sent to this address will be forwarded to Internal Security
] (Inspection), the IRS's "internal affairs" type organization. Internal
] Security is responsible for investigating criminal acts which attempt to

A non-governmental organization which deals in such things (and more) is the National Fraud Information Center, which is funded by grants from major corporations and works in cooperation with federal, state, local and international law enforcement agencies. Their purpose is organize, classify, and forward "stuff" to the appropriate body: state's a.g, FTC, FBI, Secret Service, wherever.

Thus they are not "law enforcement" and the problems of inaction by local district attorneys, etc. persist (d.a's have "too much work to do" to go after an individual posting a chain letter). You can e-mail them at <nfic@internetmci.com>, or get information from their web page, which is at:

http://www.fraud.org/

For stock fraud and the like, some people have been complaining to the Securities and Exchange Commission at the address <enforcement@sec.gov>. I'm not sure if there've been any results from that corner, however.

3.17) What is a killfile, and how do I use one?

A killfile enables you to permanently avoid reading posts by certain people, or from a certain site, or whose Subject: lines contain particular words... Check out the RN killfile FAQ at:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/killfile-faq/faq.html

If your newsreader doesn't allow killfiling, write the author of the newsreading software and ask them to add support for killfiles. Although it doesn't discuss killfiling, see 'The "Good Net-Keeping Seal of Approval" for Usenet Software' at:

http://www2.thecia.net/users/rnewman/Good_Netkeeping_Seal

for more information on what makes a good newsreader.

And, for good advice on who to ignore, see the Global Killfile:

http://www.uiuc.edu/ph/www/tskirvin/global/

3.18) How do I killfile all crossposted messages?

It's becoming quite common for people to killfile all messages crossposted to more than X newsgroups, because this cuts down on the amount of blatantly off-topic crap they have to read.

This is simplest to do in the rn family (rn, trn, strn, etcetera) using a killfile entry like the following:

/^Newsgroups: .*,.*,.*,.*,.*,./h:,

That one kills anything posted to more than six groups, plus all of the followups in that thread (that's what the comma at the end means.) For less groups, use less .* entries -- for more groups, use more.

Peter Kappesser suggests a somewhat more efficient form for servers which support the Xref extension to the News Overview database file (if you aren't sure if your server supports it, just check and see if there's an Xref: header in the messages you see. If there is, it does.):

/:.*:.*:.*:.*:.*:/HXref:,

In this, the number of colons equals the threshold number of groups. This is more efficient because the Xref header line is transferred with the NOV file when you enter the group, so trn can process it quickly. If you kill on the Newsgroups line, trn has to fetch from the server at least the header for every article in the group in order to examine it for the kill.

One slight difference is that Xref contains only those groups carried by the server, which may not necessarily be all those listed in Newsgroups. However, this isn't often a problem -- most ECP's are to a dozen or more groups, so it doesn't matter that Newsgroups lists 27 groups while Xrefs only has 18, it's still greater than 6!

3.19) What is the Usenet Death Penalty (UDP)

There are two different things commonly referred to as "UDP."

The one least argued about could be called "shunning" or "aliasing," in which a newsadmin (running INN unoff3 or above, or using the 'shun' patch to earlier versions of INN) can add a site's pathhost to their ME line. They simply won't get any messages from that site. Some may consider this censorship, but it fits quite well with the simple but often forgotten concept that a newsadmin can do whatever they want on their own machine so long as it doesn't cause any problems for other newsadmins.

The other Usenet Death Penalty is automatic cancellation of all messages from a site, or from a person, or based on a regular expression. This is sometimes done when a spam (or spew) continues unabated even after the spam cancellers and other net-abuse activists have attempted to contact somebody and ask them to stop. As you can guess, there are arguments about this which have literally been going on for years.

Currently, the general consensus among news.admin.net-abuse.misc participants is that UDP of either type should only be employed after every other method has been tried and failed.

In the useless trivia column, the term "Usenet Death Penalty" was first coined by Eliot Lear. The first software to perform it was written three years earlier by Karl Kleinpaste in 1990, and was 28 lines long. Karl is also known as being the author of the anonymous server software.

The second (previous versions of the FAQ referred to it as the first) was written by Rich $alz (the inventor of INN) in Perl in April, 1993. It was 76 lines long, including instructions for use.

3.20) Do all hierarchies have the same rules?

Nope. This FAQ mainly deals with what's considered net abuse in the "Big 8" (comp.*, humanities.*, misc.*, news.*, rec.*, sci.*, soc.*, and talk.*) and alt.* (we also touch on biz.* a little bit.) But there are many hierarchies -- especially regional and local -- which have begun to adopt much stricter policies on net abuse.

The main reason behind this is that the local hierarchies usually have a smaller target audience. For example, dc.* exists for the Washington, D.C. metropolitian area, fl.* for the state of Florida, and so forth. Long ago in the history of Usenet (okay, it was only two or three years ago) all the news hosts in Florida traded fl.* with each other, and it didn't leak too far out-of-state -- but now, with so many national news providers, you can read fl.* pretty much anywhere in the world.

The point, however, is that just because you have /access/ to a heirarchy doesn't mean your message is appropriate for it. Many locally oriented groups, especially *.forsale and *.jobs groups, are deluged with non-local messages, which are often crossposted to a large number of different, incongruent local heirarchies. While these don't individually set off alarms on the world's spam-watching software, they can make a group become useless for local postings because it's so hard to wade through all the misplaced stuff.

So, most local hierarchies now have people (or, more often, groups of people) watching over them, sending copies of the FAQ or Charter to people who post inappropriately, and -- in extreme situations -- cancelling the misplaced messages. Cancellation

after the fact is commonly referred to as "retromoderation," and is still a topic of hot debate.

For more specific information, the Regional Guidelines and Periodic Postings Database can be viewed at:

http://www.unicom.com/regional/

Or, watch the group itself for a while to see if there're rules of any type. Remember that in this case, "a while" means at least two weeks, since FAQs don't get posted every day, and "but I saw other people advertising their thigh cream here!" is a really lame excuse.

There is also a mailing list dedicated to discussing the mechanics and policies that regional FAQ maintainers and retromoderators follow. For more information, contact <us-region-request@megalith.miami.fl.us>.

3.21) How about we start a campaign to stop all the spammers?

We already did -- and it's about time!

http://www.vix.com/spam/

GROAN

4.1) I hate net-cops like you people.

Who will watch the watchmen? net-cop.cops like this, apparently. ;} Anyways, anyone who wanted to police the net would be a pig-headed, unrealistic fool. Thankfully, we (the regular participants in news.admin.net-abuse.misc) just want to shoot spam out of the sky, because

* We hate it,
* It feels good, and
* We can.

Anyways, if you don't like spam being cancelled at your site, you can have your upstream feeds alias your site to "cyberspam". (Actually, you can only do that if you're the newsadmin -- but users are subject to the whim of their newsadmin anyway, so if you don't like your newsadmin's policies, you can always just build your own server and get a feed from someplace else.)

4.2) Isn't cyberporn a bigger problem than spamming?

No matter what the more sensationalistic media outlets may try to tell you, "cyberporn" is not a real problem. For more information, see cyberNOTHING's Cyberporn Report, at:

http://www.cybernothing.org/cno/reports/cyberporn.html

As for illegal stuff, like child pornography -- there are existing laws against that in most countries, so those people will go to jail, and good riddance. But they are ruining Usenet in the meantime.

Net abuse, as described in this document, is a big problem, and will continue to be a problem unless Something Is Done.

Nevertheless, a case could be made that other issues (Government-imposed censorship, etcetera) are more or equally important. But that's not what this FAQ, or the net-abuse newsgroups, cover.

4.3) Hey, I think my group's being invaded by alt.syntax.tactical!

I'm sorry to hear that. Please don't bring that subject up again here. Good luck... Keith "Justified and Ancient" Cochran, who has been wrongfully accused of a.s.t involvement himself, adds: "I would suggest the first thing you do is take a chill pill." (Note that there is no second thing to do. However, you may want to pass the time reading the alt.bigfoot FAQ:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/bigfoot/top.html

--particularly the part about cats.)

See also 3.15, "What is a killfile, and how do I use one?"

4.4) Hey, I think my group's being invaded by the "Usenet Freedom Council!"

The abusive "Usenet Freedom Council" seems to be made up of a number of accounts all owned & operated by Dr. John Grubor, a.k.a. Manus, a.k.a. DrG, a.k.a DrGodFuck, ad nausea infinitum. It used to include former Kook of the Month Steve Boursy, former Kook of the Month Bob Allisat, and former Kook of the Month Nominee Vladimir Fomin (who also no longer has access to the 'net under that false name.)

Now that news.admin.* people have pretty much unanimously killfiled him, he's started going to other newsgroups and attempting to get outraged responses from people by posting what can only be described as patent bullshit.

The best thing to do is ignore him. This, of course, made easier with a good killfile (see 3.15, "What is a killfile, and how do I use one?") The REAL "Usenet Freedom Council" was dreamt up by Dave Hayes. The best way to understand it is to view his "Freedom Knights" home page, at:

http://www.jetcafe.org/~dave/usenet/

Afterwards, I'd suggest reading "Dave Hayes / Freedom Knights: An Alternative View," which some feel is a little more realistic (and there are even those who say it's being too nice.)

http://www.cybernothing.org/faqs/dave-hayes.html

4.5) Hey, somebody posted an ad in {newsgroup}!

So?

All right, all right: first, check to see if the post was obviously forged (see 3.5, "How can I tell if a post is forged?")

Then check to see if it's spam (see 2.1, "What is Spam?" and 3.6, "How do I know when I've got spam on my hands?") It's probably not. We only want to hear about it if it's spam.

If the ad is off-topic, and you really can't let it go, check out the advice in 4.6, "Hey, so-and-so's not being nice in {newsgroup}!"

4.6) Hey, so-and-so's not being nice in {newsgroup}!

Happens all the time. We don't want to hear about it. However, here are some things you can do (written by Keith "Justified and Ancient" Cochran):

"The first thing to do is take it up with user@some.site. If you can't achieve a mutual understanding, then you _MIGHT_ (note, not WILL, _MIGHT_) want to mail postmaster@some.site with your complaint. If you are going to write to postmaster@some.site, be sure to include the full, unedited post you have a problem with, a short but descriptive summary of why you have a problem with it, and a short, but descriptive explanation of what you would like to have happen. "Note that this does not apply to MAKE.MONEY.FAST. If you see a copy of M.M.F, just e-mail postmaster@some.site, including the article ID, and the first paragraph of the post."

Of course, the descriptive explanation of what you would like to have happen must also be realistic. Since most ISP's have a policy regarding commercial posts, it's common to ask the postmaster to reiterate or reinforce whatever policy they may have on hand, rather than asking right away for the user to be nuked. It's not nice to tell system administrators what to do -- especially if you don't know the entire situation yourself.

See also 3.15, "What is a killfile, and how do I use one?"

4.7) Hey, the "Good Times" virus--

...is a total, 100%, long-proven hoax. For the complete story, see:

http://www.nsm.smcm.edu/News/GTHoax.html

4.8) Hey, there's this (AT&T, Jerry Garcia, whatever) banner message in the newsgroup descriptions!

We know, we know... It's a fairly common prank to add bunches of
newsgroups whose descriptions spell something out. Ask your local
news adminstrator to remove the whole lot.

4.9) Hey, one of those net.cops posted an ad for {something}! Haw! Haw!

"Ad" does not equal "spam".

"Ad" does not equal "net-abuse".

APPENDIX

news.admin.net-abuse.misc charter:

news.admin.net-abuse.misc is for the discussion of possible abuses
of netnews and e-mail. It is for the discussion of standards of
net abuse, to suggest appropriate courses of action (if any) to
net abuse and to post reports of alleged occurrences of net abuse.
Relevant topics include events associated with net abuse such as:
spamming (posting many individual copies of any article),
excessive crossposting of non-germane articles, injection of
malformed articles into the news system (broken gateways, for
example), or other forms of "roboposting" involving large numbers
of postings to one or more groups, forging identity of postings,
forged approval to moderated groups, forged cancellation of
articles including cancellation of net abuse articles, use of
rmgroup/newgroup in an abusive manner, large-scale mailings to
mailing lists or other mail-bombing, deciding what isn't net
abuse, general issues of netiquette, methods for resolving
conflicts, proposed blacklists and boycotts, "renegade" sites,
etc. Postings include news reports, reviews, and conferences, and
net-abuse FAQs. Although commercial posts are not inherently
net-abuse, proper methods of posting commercial material are
within the scope of this group.

news.admin.net-abuse.announce charter and guidelines:

news.admin.net-abuse.announce Charter and Guidelines

1. What topics are relevant to this group? Events associated
with net abuse, such as:
o posting many individual copies of any article.

Or, excessive crossposting of non-germane articles.
o injection of malformed articles into the news system
(broken gateways, for example), or other forms of
"roboposting" involving large numbers of postings to one
or more groups.
o Forging identity of postings
o Forged approval to moderated groups
o Forged cancellation of articles not included above. Note
that cancellation of net abuse articles is also relevant
to the topic of net abuse.

o Use of rmgroup/newgroup in an abusive manner
o large-scale mailings to mailing lists or other
mail-bombing

Postings to this group may also include announcements
relevant to the topic of net abuse, such as news reports,
reviews, and conferences, and possible net-abuse FAQs.

The purpose of this group is not to decide the guilt or
innocence of any parties, but rather to simply report on the
activity (much like the crime section found in many local
newspapers). It must be kept clear that the net is a new
legal area, but it is also one with a lot of unwritten rules.
The moderators are in no way are attempting to act as judges,
lawyers, or mediators.

2. Posting of reports of this kind of activity in no way implies
that net-wide cancellation of such articles are to be
encouraged. How local news admins deal with such incidents is
strictly up to them. The moderators of this group should not
be held responsible for actions taken by others in response
to articles posted to news.admin.net-abuse.announce.

3. No moderator will engage in the following activities:

o cancellation of any posts other than ones posted by
them, excepting articles with forged approval to
newsgroups they moderate or, if they are a news admin,
posts originating from their site (following the local
site's procedures).
o Sending of "mailbombs", threats, abusive e-mail, or
other attacks in response to alleged net abuse.

4. We are committed to providing accurate information regarding
events related to net abuse (with emphasis on Usenet) in a
timely manner. However, as we the moderators must often rely
on the reports of others, whenever we have not confirmed a
report ourselves we will state so in the posting.

5. Right of Reply. If posts have been made in this group
concerning an individual's alleged net abuse and the
individual and/or site from which it originated have suffered
negative consequences in the form of articles cancelled,
accounts cancelled, or substantial negative email; then the
individual and site each have the right to one (but no more
than one) reply for the purpose of justification, rebuttal,
or reports of actions taken to correct or cancel the alleged
abuse.

6. Examples of inappropriate postings:
o redundant reports of events
o Trivial events, for example "Hey, this guy posted an ad
to comp.sys.xyz!"

7. Administravia
o Approval of postings will be made by a team of
moderators.
o Change of moderators will be made by majority. Forcible
removal of a moderator will be by consensus of remaining
moderators.
o Any rule changes will be made by majority of the
moderators.

Initial moderators:
David Barr (barr@math.psu.edu)
Joel Furr (jfurr@acpub.duke.edu)
Paul Phillips (paulp@CERF.NET)
Abby Franquemont-Guillory (abbyfg@tezcat.com)

This document is Copyright 1996 by Scott Southwick and J.D. Falk, all rights
reserved. Permission is granted for it to be reproduced electronically on
any system connected to the various networks which make up the Internet,
USENET, and FidoNet so long as it is reproduced in its entirety, unedited,

979. Appeal to Veterans: Recover USAF "AIR" Callsigns

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-13 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <33c92a0d.0@newscene>
Source record: 193620
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,soc.veterans,alt.military.cadet,sci.military

Recently, the Federal Communications Commission has reversed decades of policy against reissuing expired amateur radio callsigns (or even honoring specific sequences such as those containing distinctive, military suffixes). Through the "Vanity Callsign" program, for a $30 fee, an amateur can apply for a specific, unused callsign that he or she is eligible to hold. Clubs are also eligible to obtain specific callsigns as club stations.

This has important implications for quite a number of historic, and long-since inactive, "military recreation" stations, often with distinctive suffixes (these stations were likely in the Military Affiliate Radio System or MARS, before they converted to amateur radio club stations). For the USAF, there was a network of such stations with distinctive "AIR" suffixes, including (according to the 1963 and 1969 Amateur Radio Callbooks):

K1AIR
Otis AFB
Bldg. 3741
Falmouth, MA 02540

K3AIR
Olmstead AFB
Bldg. 616
Middletown, PA

K4AIR
1913th Comm. Sqdn.
Langley AFB
Hampton, VA

K5AIR
Barksdale AFB
1927th Comm. Sqdn.
Shreveport, LA 71110

K6AIR
Hamilton AFB
Bldg. T-91
Hamilton, CA

K8AIR
2046 Comm. Sqdn.
Bldg. 199
Wood City

Wright-Patterson AFB
Dayton, OH

K9AIR
1918 Comm. Sqdn.
TCVM
Scott AFB, IL 62225

K0AIR
Elect. Maint. Sect.
1911th Comm. Sqdn.
Bldg. 305
Offutt AFB
Bellevue, NE

All of these licenses had expired by the mid 1970's at the latest. The reasons for this sad, and almost total, decline of amateur radio (and MARS) presence on USAF bases are many and complex. They include:

- Changing communications needs
- Changing training needs
- Increasingly shrinking funding (both appropriated and unappropriated, such as via Morale, Welfare, and Recreation units) for what amounts to "nice-to-haves"

and probably most importantly, the (in my opinion) gradual inability of amateur radio over time (particularly in recent decades) to keep up with current technologies and train people in a skill-set relevant to the needs of the Armed Forces, including the USAF (and this ability is implicit in the Basis and Purpose section of FCC Part 97, Amateur Radio Service Regulations).

The good news is that, with the above-mentioned Vanity Callsign program, there is the opportunity to recover these callsigns, either on behalf of on-base clubs, or simply private groups of interested active-duty personnel and veterans. Such callsigns could be retained and used solely for historic value, or more ambitiously, as part of an effort to revitalize active-duty and veteran interest in amateur radio (such groups represent, in my opinion, high-quality potential recruits for amateur radio, and could possibly be part of a revitalization of the hobby, including increasing relevance to professional communicators). K0AIR, in particular, was recovered by a recently-constituted private group of veterans and active-duty personnel:

Callsign: K0AIR
Club Name: STRATEGIC AIR COMMAND MEMORIAL ARC
Addr1: PO BOX 1292
Addr2: BELLEVUE NE 680051292
Country: USA
Effective: 15 May 1997
Expires: 12 Feb 2007

Trustee: PAUL W SCHLECK K3FU
Location: 41.151 N 95.910 W Sarpy County
Email: pschleck@novia.net update
Home Page: http://www.novia.net/~pschleck/sacmarc/

(Roy Gertig, N0RG, also recovered General Curtis E. LeMay's Nebraska callsign, K0GRL, with the permission of the General's daughter, on behalf of the SACMARC)

Due to a strange (possibly deliberate) omission in the FCC's new Vanity Callsign regulations, military recreation stations are ineligible for vanity callsigns. However, the distinction between a military recreation and regular club station is that the former need only have a unlicensed station "custodian," whereas the latter must have a licensed trustee, 3 additional members, and a constitution or articles of incorporation. This distinction is probably moot in most cases (with interested on-base groups being able to constitute clubs that are "military recreation stations" in all but name).

Due to pent-up expectations over the years, and in fairness to older and higher-class amateurs with more legitimate claims on older callsigns, the program was divided into application "gates," with sequential dates for accepting applications ordered by gate. The gates are:

Gate 1: Amateurs recovering callsigns previously held by them or immediate family members, or clubs desiring
to obtain a deceased member's callsign "in memoriam"

Gate 2: Extra-class operators

Gate 3: Advanced-class operators

Gate 4: General, Technician, and Novice-class operators

Right now, Gates 1 and 2 have been open for some time. K0AIR was recovered by an Extra-class trustee (i.e., me) under Gate 2, but the rest remain unissued (with the previous holders' claims likely long since expired). With the opening of Gate 3 on August 6, 1997, the opportunity to recover these historic USAF callsigns is extended to Advanced-class amateur radio operator trustees.

I would strongly urge interested groups of amateurs, particularly active-duty members and veterans of the Air Force, to seek to recover some of these historic callsigns before they are reissued to others (possibly those who do not appreciate their history). If you act immediately, it is possible that these callsigns may be recovered in time for the USAF 50th Anniversary QSO Party in September (see the SACMARC WWW Page above for more information).

I would be more than happy to answer questions, and provide advice with regard to making applications, not only for those seeking these specific USAF callsigns, but also other similar and distinctive callsigns held by

units in all branches of the Armed Forces too numerous to mention here.

--

980. SACMARC Organizing SAC Museum Amateur Radio Exhibit in 1998

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-13 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <33c92bf7.0@newscene>
Source record: 193621
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.boatanchors,alt.military.cadet,soc.veterans,sci.military

The Strategic Air Command Memorial Amateur Radio Club has the fortuitous opportunity to exhibit at the new, enlarged SAC Museum near Ashland, Nebraska sometime early next year (based on feedback from SAC Museum Registrar Fred Poyner). Amateurs who have read the May QST article "Once Again, A Ham Operator in Command" know that there is a significant amount of history behind, and a long-standing positive relationship between, amateur radio and military communications, particularly within the Strategic Air Command. The influences of General Curtis E. LeMay (K0GRL, W6EZV) in inserting superior amateur radio technologies (such as Single Sideband) into SAC communications systems are almost legendary.

We are pursuing contacts through USAF historical agencies, local SAC organizations, and Rockwell Collins (formerly Collins Radio). We are also actively seeking loans or donations of military radio equipment, historical documentation, and even personal historical accounts (oral or written) of those who remember General LeMay, 1950's era SAC communications systems (including USAF MARS), or even amateur radio station K0AIR at Offutt AFB.

Individuals who have specific contributions or referrals in mind should contact either Paul Schleck, K3FU, at (402) 291-6176 or pschleck@novia.net, or Steve Hunt, KB0MYH, at (402) 291-9253 or shunt23877@aol.com. You may also write the SACMARC at P.O. Box 1292, Bellevue, NE 68005-1292.

For more information about the SACMARC and its activities, check out our WWW Home Page:

http://www.novia.net/~pschleck/sacmarc/

"Numerous" is being kind, Mike. I've just counted 40 of his anonymous
posts this morning (all which were repetitions of just two articles).
For some odd reason, he also sent them all to me via email, too.
I'm afraid the old boy has gone off the deep end.

>than rational within this issue and hearing only what we WANT to hear.
>Part 97 does not say, "Legal or illegal communications." It does not say,
>"...to any radio communication." It says, "...to any radio communication
>OR signal." My emphasis on OR.

The definition of "radio communication" or "signal" is up for debate,
since neither term is defined in 97.3. However, I think most amateurs
would agree that "radio communication" involves two or more stations
engaged in a conversation and/or data transfer (since there are non-human
"communications), whereas a "signal" originates from a single party,
such as someone calling CQ, or a beacon station.

>Now, if you and I were to fight this out in court (just an example as I
>have no interest in pursuing this outside of r.r.a.m.) I would win based
>on what is printed in the FCC rules.

I think you grossly overvalue your self-worth.

>I am not an attorney, don't get me wrong. I HAVE taken some law classes
>and am a LITTLE familiar with how to read this text objectively...besides
>I have posed the same question (as yours to the FCC official) to a couple
>of attorneys (one of whose name is Tom Stennis--who taught one of my law
>classes--and who is the grandson of the late Mississippi Senator John
>Stennis) Tom's response led me to believe he interpreted it the same way
>as I.

Well, I don't know Tom offhand, but unless Tom is a communications law
attorney, or is familiar with applicable case law on the subject, I'd have
to take his expert legal analysis with the same grain of salt that I take
the rest of postings on USENET. Now, if your attorney was Phil Kane, your
conclusion might have more weight.

>On another note, lack of enforcement to the rules isn't because the FCC
>doesn't care as many seem to attempt to have us believe. But it takes
>money. We all know that the FCC has been severely cut in the funding
>arena. Enforcement is based upon priority (my assessment here) or letters
>to Hillary.

No disagreement here. Any society, including ham radio's society, quickly
degenerates to anarchy if there is no "law and order". There are a
multitide of socilogical reasons for this.

989. COR (Carrier Operated Relay) Help- Yaesu FT-2200

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-13 00:00:00 UTC
From: Dave Fischer <DaveFischer@poboxes.com>
Message-ID: <33C8BD9D.61D1@poboxes.com>
Source record: 193630

I have a Yaesu FT-2200, and I need a signal from it of 5 volts when it receives a signal. I have tried looking at the schematics, and have opened up the radio and tested many points for a voltage change, but I have gotten no results.

Could an alternative be to have some sort of ciruit that would put out a 5 volt signal whenever it detects audio (even full quieting w/ no modulation?)

When the proper CTCSS tone is received??

Any ideas would certainly be appreciated.

993. DMARC Meeting 7/19

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-13 00:00:00 UTC
From: Stan Staten <w3ink@erols.com>
Message-ID: <01bc8fd6$51d33220$138aaccf@sstaten.erols.com>
Source record: 193634

The Digital Mid-Atlantic Radio Council meeting July 19 at 1 PM at the Prince
Georges County Emergency Operations Center.

DMARC exists to provide a forum where those amateur radio operators interested
in the "digital domain" can network together to learn more about packet radio,
TCP/IP, APRS and other digital modes. The DMARC organization has several
on-going initiatives that are focused on developing tools and educational
packages to assist more amateurs in getting exposed to this challenging aspect
of the amateur radio service.

Mark your calendar and plan to attend our next quarterly meeting which has
been scheduled for Saturday, 19 July beginning at 1 PM. We will be meeting at
the Prince Georges County Emergency Operations Center in Seat Pleasant, Maryland
- conveniently located just 1.5 miles west of the Washington (DC) Capital
Beltway (I-95) on Maryland Route 214. Turn right on Jonquil Street, go two

blocks, then right again on Anchor Street. Go up the hill and park in the
visitor's parking lot. Talk-in on the KA3LAO 147.18 MHz (+)2-meter repeater.
No time for lunch? Come right on over anyway... we will be serving sodas and
refreshments!

Ongoing topics of discussion will include the latest news on the various band
plan changes to be implemented over the next 6 months; actions now on-going to
install high speed backbone nodes in the DMARC operating area; and the latest
scoop on DMARC educational programs. Want more info? Then click your
Internet web browser to WWW.QSL.NET/DMARC and get the very latest we have to
offer on a number of digital topics. Those of you on packet just have to
watch for the DMARC@MDCBBS and DMARC@VANET bulletins on your friendly
neighborhood BBS... WHAT - no local BBS! Hey, how about starting one up then.
Don't know how... then send an e-mail to DMARC@QSL.NET and we'll help you get
started.

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi all, I have a Kenwood TH-78A dual band Handi talkie that I'd like
to trade. It has 3 battery packs. One is 12 volts at 800ma, one is
12 volt at 700ma and the last is 7.2 volts at 800ma. ALL the packs
are in very good condition, the 12@800 and 7.2@800 are not even a year
old. The radio is an 8.5 - 9 out of 10. It is in excellent working
condition. It also has the mods done. It also comes with the manual
and a W&W charging CUP, NO CHARGER. I use the W&W charger
for another radio. I bought the radio without a charger.

I'd like to trade for an older 2 meter all mode rig with a digital
display and PL. It must be nice looking and good working
order. I'd like a base unit but would consider a mobile.
I will pay cash to balance the deal if needed.
What do you have??

NOTE It is only legal to transmit with this radio in the
Amateur band. Don't risk your license.

NOTE If you want to E-mail me, you MUST REMOVE the NO.JUNKMAIL
in my address. I'm trying to stop the unwanted Junk Mail.
SORRY for the inconvenience but it's getting out of hand.

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

Also, make sure the hood is well grounded to the car frame. You might
even attach a ground strap between the two, making sure you get
unpainted metal of course.

It means that the radio frequency settings, both transmit and receive can be modified to include those frequencies. MARS is the Military Amateur Radio System, and CAP is Civil Air Patrol. Normally, you are not concerned with those freqs unless you want to operate with one of those orgs.

>

There ARE times when you MAY legally listen to Cellular Phone transmissions, so don't say "he broke the law. Period."

He may have been investigating local interference, from or to, the Cellular frequncies or nearby Ham frequencies, or nearby public service frequencies. In which case, you ARE LEGALLY ALLOWED to listen to the Cellular Frequencies long enough to find the problem!

Unfortunatly, the arresting officer was probably as knowledgable of the laws as you are, and that is why so many cases are dissmissed by judges.

Cellular Phone Technicians MUST listen to Cellular Frequencies, or they would not know if the phones are working properly. There are MANY cases in which these frequencies MUST be listened to, and that is why the LAW allows for this. Trying to prove if someone was listening to them Legally, or illegally can NOT be done if the listener is SMART and PREPARED! Remember, the legal system is a great big GAME, and the person with the highest paid lawyer USUALLY in most cases wins.

Tack:

First, you want to get your signal into the body. So, avoid even HF.
The body has better absorption as you move higher & higher in frequency.
When you get up to the microwave range, the skin starts to present a
significant impedance discontinuity, which means reflection of your
signal. You will need more & more power, and most of the power will be
reflected or go into tissue heating.
Go down as low as you can. Actually, I suggest that you use magnetic
field coupling. You don't need distant data transfer, just a
non-invasive link, right? So, use about 100 KHz, with a small loop as a
transmitter and another small loop implanted under the skin. Milliwatts
will give very adequate coupling, and the freq will support a reasonable
data rate.
Check out the technology already developed for programmable cardiac
pacers and for implantable volumetric infusion pumps.

They are on a SHARED basis, with priority given to the LICENSED Hams.
All consumer devices are classified under PART 15 RULES which state that
they MUST accept interference to the unit.

If you are recieving interference to your TV from your neighbors CB or
Ham radio (and the CB or Ham radio is operating legally) and you
complain to the FCC, guess what they will tell you? That it is the
fault of YOUR TV!

Before you try and argue this, call the FCC and ASK THEM! or ask for a
phamplet on this issue from the ARRL!

1006. Install Mobile Rig-Washington, DC

The Volusia County ARES/RACES Page is back up and operational!

The New Address is:
http://www.netpass.com/varecs

This page was down for awhile at an older address. The old address is not operational. If you currently have a link to VARECS at the former address (dbeach.com) please change it to the above (netpass.com). If you have taken down the link please put the new one up at your earliest convience.

Some new features include:
+ Frames
+ Image Maps
+ Music
+ Updated Links
+ The Amateur Radio Ring
+ And Many More Great Improvements

I invite everyone to check out our new page. Please spread this message to any newsgroups, mailing lists, packet BBS or any other meathod you see fit. If you have a or know of any ham radio pages, newsgroups, or any other information, that isn't on our link list please send them to kf4bia@n-jcenter.com. Personal pages are welcome along with skywarn, ares, races, civil defence, and any other ham radio related pages.

Thanks,

73

hi all,
while working cw on 40m recently my 430 started pulling 36 amps from my
power supply (normal is 25-30) while showing no increase in power out.
I always put out about 90 watts. my power supply is rated at 30 amps
ics, so it flickers on and off which causes the rig to turn on and off
several times a second. does anyone know what this sudden increase in
current drain my be caused by? thanks
mike

1016. Canadian Callsign WHOIS Server

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-13 00:00:00 UTC
From: lyndon@ve7tcp.ampr.org
Message-ID: <5qc14i$s7h@ve7tcp.ampr.org>
Source record: 193657
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

This weekend I implemented a WHOIS based callbook server for Canadian
callsigns. This started out as a benchmark for a simple
database engine I needed for a work related project, but then I
discovered the Canadian callsign data on the RAC website and decided
to test the code with some live data :-)

The server contains data from the RAC (Radio Amateurs of Canada)
callsign database as of July 3, 1997. For now you can only
search by callsign:

```
lyndon@ve7tcp:~> whois -h ve7tcp.ampr.org ve6bbm
VE6BBM
NERENBERG, GORDON LYNDON
10967 - 130 STREET
EDMONTON, AB
T5M0Z6
lyndon@ve7tcp:~>
```

Doing a search on HELP will return some very basic instructions.
The query strings are not case sensitive.

Having built this little beast I'm thinking it might actually be a
useful tool. Some things I'm thinking of are:

* implement fuzzy matching on names
* query by city, province, postal code
* add date range support to provide allow for callsign
searches based on date ranges (i.e. who had VE6BBM in 1970)
* an e-mail based interface for people without direct
IP connectivity.

An obvious extension would be to add an auxiliary database that would hold
mappings of callsigns to QSL managers. If you searched on a DX
call it would then return the info for the QSL manager in addition to
the license data associated with the DX call.

Comments? Suggestions? Volunteers to write code?

Anyone out there have any pointers to additional sources of
raw callsign databases? (I'm going to incorporate the FCC
database later this week.)

C l o s e d C i r c u i t A d v i s o r y

The following is a closed circuit advisory. We have received word from our support fund administrator that the monies needed to pay the our monthly bills is again dangerously low.

Yes, there are many sources of ham radio news, but for the past twenty years, nobody has been able to bring you this news as quickly and as accurately as Newsline. The ham magazines have a two to four month lead time. The various ham radio newsletters are at least a week or two behind what's happening. Only Newsline brings up to the minute ham radio news direct to you over your favorite repeater. That means you can tune in at home, in your car or even walking down the street while listening on your hand held radio.

But doing this costs money. It takes over $1200 a month to keep Newsline alive. Recognizing this, several years ago we established the Newsline Support Fund. It's kept separate from Newsline and exists only to pay the week to week operating expenses. And, it again needs the support of all of you who want to see Newsline survive so that these weekly bulletins can continue to air.

The address for the Newsline Support Fund is:

Newsline
P.O.Box 660937
Arcadia, California
91066

Your assistance is needed as soon as possible. We thank you all for your ongoing generosity and support.

That ends the closed circuit advisory with Newsline report number 1039 for release on Friday July 11, 1997 to follow.

(*****

The following is a QST

A spaceship to spaceship QSO by ham radio and a research panel says that there is no link between power line radiation and childhood cancer. These stories and more on Newsline report number 1039 coming your way right now!

(*****

Mike Foale on the air from Mir

U.S. Astronaut Mike Foale, KB5UAC, continues to keep busy operating the ham radio station on board the crippled Mir space station. Last week he made a couple of contacts with the crew on board the shuttle Columbia during its STS-94 mission.

On Saturday the 5th, Foale and the space shuttle Columbia's skipper chatted twice by ham radio. Columbia and Mir were passing within 150 miles of one another when contacts were made. Commander James Halsell said he was able to talk with Foale for only 30 to 45 seconds on each pass. This, as pilot Susan Still spotted the Mir through binoculars.

But Mike could not run his usual high power with the Kenwood radio on board the Mir. Earlier he reported that when he put the radio into its high power position it began pulsating. Ham radio controllers believe the problem is one having to do with the power available on board the Mir. News reports say that its only at 70% of normal. They told KB5UAC to run the radio at medium or low power to avoid the problem. Mike has been doing that ever since, and the problem has gone away.

(via AMSAT, others)

(*****

Foale's first contact

Before his contacts with the Columbia, the QSO that got the most publicity was Mike Foales' first one after the mishap. It was made only a few days after Mir collided with a Progress supply ship.

With power back up to 70 percent of normal, Astronaut Mike Foale, KB5UAC on board the Russian Space Station Mir is back on the air.

As the Russian crew works to repair the Mir after its collision with a supply rocket back on Wednesday the 25th, Foale has been heard on the air working stations worldwide. One report that has gotten worldwide media attention was a QSO he had with a ham here in New Zealand identified as Alan Leech, ZL2DAL. Leech says that Foal told him it was "pretty scary" to have a ten ton rocket crashing around up there.

A supply ship carrying additional food, oxygen and cables needed to reroute power from the solar panels outside the Mir to the power core inside arrived on Monday the 7th. The Russians hope to launch a specially trained crew to begin repairs to the Spektr within the next two months.

(Via Newsline)

(*****

MIKE FOALE TO HAMS WORLDWIDE

Now that the emergency situation on the Mir space station under better control, U.S. Astronaut Mike Foale, KB5UAC, has taken the time to thank the world ham radio community for its concern. He sent a message to Dave Larsen, N6CO, the president of the MIREX group, and asked that the ARRL and Newsline pass it along to you.

Only one problem. The keyboard that Mike is using on board thee Mir is in the Cyrillic Russian alphabet. Some of the keys differ from the IBM and Mac standard to which we are accustomed here in the U.S.A. So some OF Mike's words were a bit choppy and in a few spots we had to take the liberty of guessing at what he was trying to say.

We think we came close and here is Mike Foale's message to every ham on Earth:

"The Mir crew is very grateful for all the good wishes and interest over the world, in our troubles and tribulations. In particular, to the few hams who work tirelessly on our behalf to pass on news events in the world, and in particular how the world press is reacting to our situation. That is very valuable to us. We do not get this sort of opinion from our controllers.

During the extended power down of Mir after the collision, communication with Moscow was predictable, but totally congested with essential technical conversation. It was impossible to get any personal news of our well being to our families, in a personal way, by means of the official communications, but ham radio allowed us to fill the gap. I and my wife are extremely grateful to those hams who passed our messages for us.

We are particularly interested in longer contacts, rather than simple QSO exchanges. It is good to be able to tell people about our life here on Mir, and our problems, but the lives of Hams on the Earth are also interesting to us. I hope more hams will take the time to tell us about there QTH and surroundings also.

Signed: Mike Foale, KB5UAC

"To which it seems apropos for this editor to add, Mike if you have any way to hear us, we hams on Earth are proud to have you representing all of us in space. And special thanks to N6CO for the relay."

(*****

No cancer link to EMF

On the medical front, there's good news for ham radio and anyone living near power transmission lines. Researchers studying health effects of electromagnetic fields have concluded that power lines do not increase the risk of leukemia in children.

The new findings were to be published in the July 3rd edition of the New England Journal of Medicine and is expected to relieve some of the fears that surfaced in the late '70s and early '80s. This, when some scientists

claimed that they though they had found a connection between cancer and the fields given off by power lines and electrical appliances.

But this latest study financed by the National Cancer Institute and the University of Minnesota's Children's Cancer Research Fund found just the opposite. It looked at 638 children with acute lymphoblastic leukemia and compared their living conditions with those of 620 youngsters without cancer. They also had engineering teams measure electromagnetic fields in each child's home and at former homes. The researchers also checked to see if the mother lived near power lines when she was pregnant. They discovered that no matter how they measured a child's exposure to power line fields there was no evidence that the children with leukemia had been exposed to more electromagnetic energy than healthy children in the control group.

FCC seeks comments on petitions

The FCC is soliciting comments supporting or opposing three Petitions for Rulemaking. All affect the Amateur Service. First is RM-9115, filed in March by the American Radio Relay League. It requests that the commission amend its rules to expand the ability of stations active in the Radio Amateur Civil Emergency Service to communicate with non-RACES amateur stations and to relax the time restrictions on RACES emergency drills and tests.

Next is RM-9106, also filed by the ARRL. It solicits amendment of rules governing the Amateur Service to authorize operation on 7,100 to 7,300 kHz in American Samoa.

Then there is RM-9113, filed by Jerry J. Johnson, WA3WZF, Laurel, Maryland. Johnsons petition asks the FCC to permit retransmission of emergency weather information by any ham station authorized to transmit FM above 144 MHZ.

Finally, RM-9114, filed by James Cardillo-Lee, KE6VGV, Petaluma, California. KE6VGV asks that the Commission change the Amateur Service rules to permit hams who are emergency personnel engaged in disaster relief efforts to use ham radio frequencies while in paid-duty status.

Comments are due within 30 days of publishing in The Federal Register.

(via ARRL)

Kevin David Mitnick, N6NHG, sentenced

One of the nations best known computer hacker will remain in jail. This, following his recent sentencing in a California federal court.

A federal judge says that convicted computer hacker Kevin David Mitick, N6NHG, must stay away from all computers, cellular telephones, the Internet and anything else remotely like a computer, once he is released from prison. In sentencing Mitnik to serve 22 months in prison for using a cloned cellular phone and violating parole, U.S. District Judge Marianna Pfaelzer issued new and extensive terms for Mitnick's parole once he is released. She said if he even tries to operate a cash register outside prison, he must have permission from his probation officer.

In explaining her action, Judge Pfaelzer said she is trying to encompass as much of the expanding computer industry in her order as possible. This says Judge Pfaelzer, to keep Mitnick from on another hacking spree once he is released. Judge Pfaelzer did not order Mitnick to pay any restitution, because she says that he does not have the ability to do so.

Assistant U.S. Attorney Chris Painter says, technically, Mitnick has probably served his time while awaiting sentencing. However, he will remain in custody awaiting trial on another more recent indictment. In that one, Mitnick and an alleged co-conspirator have already pleaded not guilty to 25 counts of computer and wire fraud, possessing unlawful access devices, damaging computers and intercepting electronic messages in an unrelated case.

(Via Newsline)

(*****

Divulging content a no-no

Ironically, the FCC chose the week of Mitnicks' sentencing to reiterate the law that governs confidentiality of telephone and other telecommunications. This, in response to what the agency calls numerous inquiries from the general public.

According to the Commission, section 705 of the Communications Act prohibits the interception and divulgence or beneficial use of certain radio communications, including cellular, cordless telephone and personal communications service calls, without the authorization of the sender of the communications.

The Commission adds that this prohibition applies to all members of the public, including members of the news media and news media organizations.

(Via FCC Release)

(*****

FCC fines

Also, the FCC has amended Section 1.80 of its rules to incorporate, by reference, the Commission's Forfeiture Policy Statement and the schedule of forfeitures. A News Release on the action is available on the agency's webpage at

http://www.fcc.gov

(Via CGC Communicator)

Tower space disappearing

Tower space for ham radio repeaters may soon become very scarce. This as a by-product of an FCC mandate to broadcasters to begin getting advanced digital television on the air within the next two years. The problem could actually reach epidemic proportions.

Amateurs and broadcasters alike, could find themselves without places to build new communications towers. So says the National Association of Broadcasters in a petition before the Federal Communications Commission. The NAB wants the FCC to take quick action to brush aside some government regulations.

And if that is not a big enough problem, compounding the situation is the eminent switch of broadcasters to the all new digital tv which may require some broadcasters to construct new towers.

The petition, filed with the FCC on May 30th, asks that the FCC adopt a rule preempting certain state and local restrictions on the placement, construction and modification of broadcast facilities.

Further the petition before the FCC points out that the FCC already has the power to overturn such rules. The U.S. Supreme Court has stated that "State and local regulations may be preempted not only by congress, but also by a federal agency acting within the scope of its congressional delegated authority."

What does all this have to do with amateur radio? As tower space becomes more and more limited, amateurs will find it harder and harder to find tower space for amateur repeaters, remote receiver sites and packet node locations.

Some tower owners are already requiring tower tenants to vacate their towers in anticipation of digital tv and the need for additional space on their own towers.

For years, tower owners have tried to sell all the space they could on their towers for money making purposes. Now they need that space for their new digital tv transmission antennas. Broadcasters will be required to not only broadcast the new digital tv format, but also maintain the current tv transmission service for a phase in period of up to 10 years.

Amateurs will find tower space at a premium for many years to come.

If you have a yearly contract for tower space, now might be a good time to go and negotiate a long term lease. Do it before rates go up and you are forced to vacate your repeater or remote base site.

(Via Amateur News Weekly)

Two sent to prison for tower climber death

The owners of a communications tower company have been sentenced to serve three months in prison for safety violations. This for an accident that resulted in the death of an employee who plunged 150 feet to the ground in 1995.

OSHA says it was able to show that the company owners knew about certain safety violations and tried to cover them up. The owners are alleged to have bought safety equipment after the accident but claimed that the climber was wearing the gear when he fell.

A posting on the OSHA web site shows that the employee killed was a 20 year old male and that the fines levied in the case by OSHA alone total over $130,000.

Cosmonaut gets U.S. ham ticket

Russian Cosmonaut Vladimir Titov now is KD5AOS. AMSAT Area Coordinator Bruce Paige, KK5DO, reports that Titov took his test at the Clear Lake Amateur Radio Club test session on May 10th. Titov, a former Mir occupant, is scheduled to go on the shuttle-Mir docking mission in September.

JOHN GLENN

And while he is not a ham, NASA may be warming up to Senator John Glenn's dream of returning to space 35 years after becoming the first American to orbit Earth. The 75 year old Ohio Democrat and the space agency are seriously talking about it according to an article appearing in a recent edition of the Orlando Sentinel. It reported in its online edition that NASA has discussed the idea with the senator, and is giving it further consideration.

Glenn flew on Mercury 6 and circled the Earth three times in 1962. He has repeatedly said he would like to make a second flight as part of a study on how space flight affects aging. If Glenn ends up in outer space, he would be the oldest human ever in orbit. Story Musgrave, 61, set the record last year.

For Glenn to fly again, NASA would have to change its policy against civilians in space.

Ham Radio Fredrichshoffen

Europe is bucking America's trend of declining attendance at hamfests and conventions. This with the announcement that 20,800 hams turned out at this years Ham Radio Convention held in Fredrichshoffen, Germany. This is an increase of almost 3% over 1996, and comes close to this years 26,000 plus that showed up in Dayton last May for this years Hamvention.

According to Newslines Mitch Wolfson, DJ0QN the big difference he noticed was the shift back towards ham radio and away from computer oriented goods. Mitch says that the convention had a definite move towards computers the last few years, but this now has stopped. He says that there were very few computer only dealers this year, and the prices were not better than in his hometown of Munich. All in all, Ham Radio 1997 was one of the best attended ham radio outings held anywhere in the world so far this year.

LIMARC offers weekend license course

With the increasing business, home, and family pressures in today's modern society, many individuals are unable to spend time to study to get their ham ticket. The Long Island Mobile Amateur Radio Club, LIMARC, thinks it has the solution. It is planning a weekend ham radio course for July 26th and 27th for prospective hams in the New York metro area.

All aspects of amateur radio operation, techniques, and concepts needed to pass FCC Amateur Technician Class License Elements will be discussed. A license examination session will be given at the conclusion of the course as a final exam.

The course will be given at:

Briarcliffe College
1055 Stewart Avenue
Bethpage, New York

For more information or a course application form, call the clubs' 24 hour info line at:

(516) 520-9311

New DARA Officers

Speaking about big radio clubs, word that longtime friend Gary DesCombes, N8EMO, is the new president of the Dayton Amateur Radio Association. Other officers elected include Ron Moorefield, W8ILC as vice president, John Phillips, N8ZGT as secretary and Beverly Priest, N8VZV as treasurer. Former Hamvention General Chairman Ken Allen, KB8KE is now a Senior Director with Jim Ashman, N8KTU, elected as the clubs Junior Director. All newly elected DARA officials took office on July 1st.

AA4ED repeater on the internet

South Florida' AA4ED repeater is now connected to the Internet 24 hours a day using WebPhone software. The group reports they have had several contacts with perfect audio from around the world.

The software, available at:

http://www.netspeak.com

has a built-in voice identifier and full access control. Hams worldwide are invited to access the repeater which currently has 97 registered users worldwide.

For further information please contact the Palmento Amateur Radio Club by e-mail at:

hamradio@sprintmail.com

+-----------------------------------------------------------------------+
| |
| Mail generated on your system for a destination within the |
| 'z2.fidonet.org'-domain, was detected at this site and classified as |
| unwanted. |
| |
| If you bona-fide responded to a listserver your message unfortunately |
| also falls under that category as such type of mail is not accepted |
| nor distributed from here either. |
| |
| 'fidonet.org' is a hobby domain where individual |
| people run individual mailers using PSTN-technology out of their own |
| pocket and every such message adds to the cost. |
| |
| Therfore the original message is bounced back to you at the gate. |
| |
| Fidonet-participants are victimised by thousands of bogus listserver- |
| subscriptions and you may very well be a side-victim of this. |
| |
| In that case your cooperation would be greatly valued by crossposting |
| this mail to the postmaster/owner of the mailing-list/list-server with |
| a request to kick any subscription coming the 'z2.fidonet.org'-domain. |
| We are bothered here by it as much as you are now. |
| |
| If you are residing in the USA then the following notice |
| may apply to you. Please read it attentively! |
| |
| +-------------------------------------------------------------+ |
| | By US Code Title 47, Sec. 227(a)(2)(B), a computer/modem | |
| | /printer meets the definition of a telephone fax/machine. | |
| | By Sec. 227(b)(1)(C), it is unlawful to send any unsolicited | |
| | materials to such equipment. | |
| | | |
| | By Sec.227(b)(3)(C), a violation of the aforementioned | |
| | section is punishable by action to recover actual monetary | |
| | loss, or $500, whichever is greater, for each violation. | |
| | | |
| | I will report any violation 'abuse@postoffice.us'. | |
| +-------------------------------------------------------------+ |

Subject: Mounting hardware or brackets for my vechile!

I purchased a Plymouth Mini-Van and no place really to mount my radios! Now
is there a company that sells custom mounting brackets or hardware? If so
please e-mail me back! Or give please me some ideas.

Thanks Rich

Subject: Need opinions on Dual Band base station verticals

I'm in the market for a dualband base station antenna. It will be
mounted in an attic space and needs to have an SO-239 connector. I
perused the AES catalog and came up with the following models:

Diamond X-200 or X-300
Cushcraft AR-270B
Comet GP-6 or GP-3

I'd appreciate any and all comments on the performance of these
models. Thanks in advance!

From: "Fernando Robalo" <frobalo@mail.telepac.pt>
Subject: Regulament of Diploma Vasco da Gama

DIPLOMA VASCO DA GAMA

REP - Rede dos Emissores Portugueses (CT1REP), with the support of the Comiss&#65533;o Nacional para as Comemora&#65533;&#65533;es dos Descobrimentos, sponsors this Diploma which is to celebrate the Portuguese Discoveries during the XV century and specially the Discovery of the sea route to India by the Portuguese navigator Vasco da Gama.
This will be a permanent Diploma and all SSB and CW HF contacts (on the authorised amateur bands) on the different amateur regions will count, starting on 15th Novembre 1945.
Licensed Radio Amateurs and SWLs world wide are invited to participate.
To qualify for the Diploma participants must have at least 25 points but with contacts with one sation in Portugal Continental"CT" and another in India "VU".
Diplomas can be requested on one of the three different modes - SSB, CW or MIXED, and there will be 5 different classes and 5 different stamps as follows:
Class I 75 points Golden Lantern
Class II 100 points Golden Compass
Class III 125 points Golden Anchor
Class IV 150 points Golden Astrolabe
Class V 200 points Golden Helm Wheel
There is also a "Honour Roll" for those with 250 points or more.The participants of this Honour Roll can request the correspondent Trophy which is a nice filigree miniature of XVI Century Portuguese "Caravela".
Lists of stations awarded with the different classes of the Diploma will be published in Portuguese Ham magazines and bulletins as well as any foreign magazines who wish to publish them.
Logs can be certified either by photostat of QSLs or by a GCR list (General Certification Rule), certified by two different Amateurs or by a certified amateur radio Association. Should any doubt arise QSLs can be requested.
The Diploma will be awarded free of charge to members of REP (Rede dos Emissores Portugueses), and will cost 1000 portuguese escudos for non members residing in Portugal. For Europe the cost will be US$ 8.00 or 12 IRCs and US$ 10.00 or 15 IRCs for the rest of the World.

Certification stamps for each class are sent free of charge, providing a list of the contacts, certified in the same way as the original log is sent together with self addressed stamped envelope (SASE) or a self addressed envelope (SAE) and 2 IRCs.
For the "Honour Roll" trophy the cost will be US$ 30.00 or equivalent for Portugal or Europe and US$ 40.00 for the rest of the World.
All requests to:

| Mail generated on your system for a destination within the |
| 'z2.fidonet.org'-domain, was detected at this site and classified as |
| unwanted. |
| |
| If you bona-fide responded to a listserver your message unfortunately |
| also falls under that category as such type of mail is not accepted |
| nor distributed from here either. |
| |
| 'fidonet.org' is a hobby domain where individual |
| people run individual mailers using PSTN-technology out of their own |
| pocket and every such message adds to the cost. |
| |
| Therfore the original message is bounced back to you at the gate. |
| |
| Fidonet-participants are victimised by thousands of bogus listserver- |
| subscriptions and you may very well be a side-victim of this. |
| |
| In that case your cooperation would be greatly valued by crossposting |
| this mail to the postmaster/owner of the mailing-list/list-server with |
| a request to kick any subscription coming the 'z2.fidonet.org'-domain. |
| We are bothered here by it as much as you are now. |
| |
| If you are residing in the USA then the following notice |
| may apply to you. Please read it attentively! |
| |
| +-------------------------------------------------------------+ |
| | By US Code Title 47, Sec. 227(a)(2)(B), a computer/modem | |
| | /printer meets the definition of a telephone fax/machine. | |
| | By Sec. 227(b)(1)(C), it is unlawful to send any unsolicited | |
| | materials to such equipment. | |
| | | |
| | By Sec.227(b)(3)(C), a violation of the aforementioned | |
| | section is punishable by action to recover actual monetary | |
| | loss, or $500, whichever is greater, for each violation. | |
| | | |
| | I will report any violation 'abuse@postoffice.us'. | |

This message is a guide to buying and selling over Usenet. It is intended to serve as a guide for users unfamiliar with common conventions used in the Usenet marketplace. Questions and comments may be directed to the author, Jay Maynard, K5ZC, via Internet electronic mail at jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 29 June 1994 to add the discussion about how UPS does COD remittals. Thanks go to readers of the personal radio newsgroups, who provided feedback to the net about proper use of this forum, and especially Paul W. Schleck, KD3FU, pschleck@unomaha.edu, who compiled most of the net wisdom and suggested the creation of this article.

Usenet has proven to be a valuable resource for many folks. Along with lots of discussion, argument, and good, solid information, it's also a good place to buy or sell equipment, and many people have done so successfully. As with any other medium, though, there are conventions that make everyone's life easier if they're followed as much as possible.

The following are some suggested guidelines for using the rec.radio.swap forum, based on general net-wisdom from users. Most of it is basic common sense, but it is unfortunate that some users have consistently abused this forum by not following such basic common sense. The general guidelines will serve as well for other groups on the net, such as misc.forsale and just.about.anything.marketplace.

What is appropriate to post in rec.radio.swap?

Any offer to buy or sell radio and electronics equipment, such as transmitters, receivers, antennas, electronics parts, and radio-related computer equipment is appropriate for this forum. Posts concerning non-hardware (but still radio-related) items such as documentation manuals, books, radio-related software, and publications, are also welcome.

Please do not post discussion articles to this group. If you really must post, please do so to the appropriate discussion group. Use email whenever possible, especially if you feel someone has committed a breach of etiquette.

Articles concerning illegal equipment (such as CB linear amplifiers and police radar jammers) are not welcome. Not only will you be severely "flamed", you are also opening yourself (and possibly the owners and administrators of your news site) up to civil and criminal liability. Individuals who are involved in the regular business of buying and selling for profit are requested not to abuse this forum by using it as a "free advertisement" service for their business, although they are welcome to participate as individuals. The distinction here is that there is a cultural bias on Usenet, and an actual

prohibition on some networks that carry Usenet traffic, against using the net for commercial purposes. Let your conscience be your guide.

Doesn't this article violate its own guidelines?

Well, yes and no. In the strictest sense, this article violates the rule that only buying and selling advertisements belong in the rec.radio.swap newsgroup. However, since those using this newsgroup are most likely to see articles in the same newsgroup, and since this newsgroup serves readers of the rec.radio.amateur.*, rec.radio.cb, rec.radio.shortwave, and rec.radio.scanner newsgroups, posting it here provides the greatest visibility with the least intrusion. Other suggestions which achieve the same goals are welcome.

If you are looking for something specific...

Try to first find the item through ot

Not exactly, but cut-and-try is certainly a reasonable empirical
alternative to modeling, wouldn't you say? ;-)

From: Curtis Wheeler <cwheeler@ccnet.com>
Subject: Repeater Liability Insurance

Has anyone here (individual, club, etc) had to obtain liabilty insurance for a repeater? Sometimes, as condition of tenancy at a commercial site, landlords will require insurance - which is not entirely unreasonable. But what if you were told that in order to renew your lease you had to provide a $1 million policy. Who would you go to for information?

From: jcwren@atlanta.com (John Wren)
Subject: Schematics For Icom BC-80 Battery Charger?

I'm looking for the schematics for the Icom BC-80 battery charger, if anyone has taken thiers apart. I tried pretty hard to get the halves separated on mone without breaking it, to no avail. In lieu of schematics, if anyone has determined what the various switch combinations represent, I would be interested in that.

Thanks much.

- John Wren

| |
| Mail generated on your system for a destination within the |
| 'z2.fidonet.org'-domain, was detected at this site and classified as |
| unwanted. |
| |
| If you bona-fide responded to a listserver your message unfortunately |
| also falls under that category as such type of mail is not accepted |
| nor distributed from here either. |
| |
| 'fidonet.org' is a hobby domain where individual |
| people run individual mailers using PSTN-technology out of their own |
| pocket and every such message adds to the cost. |
| |
| Therfore the original message is bounced back to you at the gate. |
| |
| Fidonet-participants are victimised by thousands of bogus listserver- |
| subscriptions and you may very well be a side-victim of this. |
| |
| In that case your cooperation would be greatly valued by crossposting |
| this mail to the postmaster/owner of the mailing-list/list-server with |
| a request to kick any subscription coming the 'z2.fidonet.org'-domain. |
| We are bothered here by it as much as you are now. |
| |
| If you are residing in the USA then the following notice |
| may apply to you. Please read it attentively! |
| |
| +-------------------------------------------------------------+ |
| | By US Code Title 47, Sec. 227(a)(2)(B), a computer/modem | |
| | /printer meets the definition of a telephone fax/machine. | |
| | By Sec. 227(b)(1)(C), it is unlawful to send any unsolicited | |
| | materials to such equipment. | |
| | | |
| | By Sec.227(b)(3)(C), a violation of the aforementioned | |
| | section is punishable by action to recover actual monetary | |
| | loss, or $500, whichever is greater, for each violation. | |
| | | |
| | I will report any violation 'abuse@postoffice.us'. | |
| +-------------------------------------------------------------+ |
| |
| Kind regards, |
| |
| Ward Dossche |
| Fidonet Coordinator for Europe |

* Continuation 1 of a split message *

the League is that their paid, professional staff is way too strapped for time doing their regular duties to take on such open-ended burdens, paticularly when the benefits of such labor would seem to mostly consist of non-ARRL members. In particular, when Ron Klimas, WZ1V, asked the League to take over maintenance of his Ham WWW Links Directory, they specifically declined. Even if they accepted, I would be concerned about editorial autonomy. I have nothing against the League (I'm a member) in particular, just that I realize that no organization is going to fund something that could potentially criticize or be at odds with the organization. Volunteers not beholden to any organization have proven to be the most successful maintainers of information resources on the Internet.

If you have further specific information about ARRL plans (or even willingness) to maintain such FAQ's and make them easily accessible to all via the Internet (names, please), then please share such important information with the newsgroup.

>Personally, I would vote to have it be a moderated newsgroup
>if there were volunteers to do the moderating, or at least

>have a program do searches and eliminate the FS, make money,
>sex, Burt Fisher, and the code posts from all but policy,
>and then one could just unjoin that one group.

>It is unfortunate that at this time when technology and multinational
>communications presents opportunities to formulate new policy
>and strategy, that the level of dialogue on policy is so low.

>At first I read messages, then I scanned titles, now
>notice names of groups. The signal to noise ratio needs to be
>raised significantly on all the r.r.a...groups I read.

It all comes down to the multiple, almost intractable, problems of group apathy, "Tragedy of the Commons," the need for large-scale and ongoing user education (with a very high novice to expert ratio), and the 95/5 principles (both in that 95% of the positive contributions are done by 5% of the participants, and also that 95% of the negative contributions are done by another 5% of the participants). Based on six years of participation in these forums, I don't believe that there are any "silver bullets" to solve these problems, just lots of hard, ongoing, and thankless work.

It isn't necessary to thank me for any contributions that I've made. What I would ask is that I not be non-constructively criticized, especially by those who have sat on the sidelines.

Why is it the pot stirrers like to flame and stir the pot and when they get the inevitable response then they whine and cry and say complain to the provider? Because they are gutless. These are the guys that don't put their calls in their posts,don't wear a namebadge to a hamfest afraid someone will slap them. They sit and listen to problem frequencies on hf for hours like little puppies with their nose pressed up against the glass. Then they complain to everyone about what they enjoy listening too. Little spineless geeks living vicariously through other people. Gerald Shit fits that to a "T".Complain Gerald,but you know deep down you wish you were me,you are green with envy. Complain all you want,but if you mess with the bull, you get the horns.

Subject: CBers on 10 meters?

We hams should band together and stop the non-licensed operators on 10 meters. I've noticed quite a bit of CB activity around 28.085 lately and we should put a stop to it before it gets out of hand. There'
s no excuse for them using 10 meters when it's obvious they have access to all of the frequencies below that into 11 meters. Anyone else have similar feelings about this?

Regards,
Keith - n3uux

I sent a message to Bart that went unanswered at ARRL.
As far as I am concerned the ARRL can release anything
they have about me.

Burt

>

I'm absolutely with Roy on this one:

DESIGN IT FIRST and then "build it, measure it, modify it"

... which is actually what the original questioner wanted to do.

>>How sad for amateur radio.
>
>That's why we're referred to as "amateurs." The "professional radio service"
>is next door.

We're referred to as "amateurs" for a variety of reasons, including:

1. We don't get paid.

2. We don't have access to professional equipment.

3. Most of us have less time than professionals, because our full-time
job is something else.

4. Because of #1, #2 and #3, we sometimes have to cut corners.

5. We can't be bothered to think and learn how to do it right.

I can live with #1, #2, #3 and even #4 - but if "amateur radio" had to
mean #5 as well, I'd be outa here.

Fortunately there are people like Roy around to remind us that it
doesn't have to be that way.

nomination form, included in your newsletter. Remember, WICEN is composed of "Amateurs who care".

A new event on the WICEN calendar is the VRA Annual General Meeting, at Randwick, over the weekend of 27-28th September.

Saturday 12th July sees the running of the Colo Classic Endurance Ride, the communications for which is being organised by Blue Mountains WICEN. Three more operators are still required to cover all checkpoints, and a meal will be provided from the BBQ when operators complete their checkpoint. It is a 24-hour event starting at midnight on Friday, and checkpoints will be open for a maximum of 8 hours. If you would like to help out, please contact Neil Fallshaw, at work on (02) 9342-1589, at home on (047) 51-6449, or e-mail as "neil_fallshaw@optus.com.au".

The Central Coast AGM will be held on 25th July, at the Central Coast Rescue Squad Base, Rose St, Wyong, starting at 8pm.

The Hunter region will be providing safety communications for the "CanTeen Annual Troy Newman Cycle Trek" from Sydney to Newcastle on 27th July; the event co-ordinator is Pauline VK2GTB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

SPACE NEWS

MIR BACK ON AIR

Ham radio aboard the Mir has been getting some casual use again as the three-man crew continues efforts to get life back to normal aboard the Russian space station. General ham radio operation was suspended in the immediate wake of the mishap last week that damaged one of the Mir's compartments. But this week, US ham-astronaut Mike Foale, KB5UAC, expressed ''thanks for all your good wishes'' to hams around the world. The British-born Foale is using both 2 meters and 70 cm ''sparingly,'' according to SAREX Principal Investigator Matt Bordelon, KC5BTL. Werner Staubitzer, VO1CAT, in Pouch Cove, Newfoundland, reports he had ''a lengthy QSO'' with Foale over the weekend. Foale told VO1CAT that the crew was ''feeling fine and is making repairs to the damages as best they can while waiting for the required parts to arrive.''

Ray Webber, ZS6RSW, in Pretoria, South Africa, reports that he connected to Mir on packet (using the 145.800/200 split-frequency pair) on June 28.

Foale and his Russian cosmonaut crew mates again found themselves in crisis mode Wednesday, July 2, when the spacecraft lost attitude control. In a packet message to MIREX CEO Dave Larsen, N6CO, Foale related how, after the alarm sounded, ''we go rushing from one dark module to another, trying to look out windows, and point the solar arrays. The station dies very quickly if we don't do this.'' Foale compared the situation to ''being on a yacht at sea, with the wind changing all the time,
and having to rush around pulling sails down, or putting them up, before a storm comes.''

Foale said the attitude failure has made the crew very wary of the next Progress rocket docking, set for Monday, July 7. ''Life on Mir is characterized by long periods of monotonous, serene calm, and short interludes of extreme frenzy, I am learning,'' Foale said.

The Progress rocket will supply cables and a special plate to fit over the hatch of the damaged Spektr science module. The crew will try to make cable connections to get the station back up to full power. Another Russian crew is scheduled to fly up in August to seal the leak and put the Spektr module back on line. Meanwhile, Foale and the cosmonauts are

working on their new--but faulty--oxygen generator to get it back on line.

They are using incendiary candles to supply oxygen temporarily. Although the cosmonauts have begun practicing the repair routines, they and Foale still have a lot of time on their hands, and much of that is spent
in darkness to conserve electricity. This means Foale has time for hamming, and, so far, no one's objected to his using a few watts of power for the radio. While Mir remains a space station in trouble, Foale is providing Amateur Radio with an intimate view of the danger and drama. KB5UAC plans to operate frequently, whenever NASA and Moscow are not using their main communication channels. Look for him on 145.800 MHz, operating split. Occasionally, while Mir is over the US, you also may find him on 145.985 MHz (simplex).

To track the Mir spacecraft, check out http://liftoff.msfc.nasa.gov/temp/Mir_loc.html. The page presents a graphical representation of Mir's location and updates every minute.

(thanks to Roy Neal, K6DUE, for his contribution to this report)

--ARRL Space Bulletin 22, dated July 2, 1997

DX REPORT

CYPRUS - 5B4JE is active on SSTV. Also, look for 5B4/G4RHM during July.

GHANA - 9G1AA will be active until the end of 1997. He is working at the Dormaa Hospital.

UNITED ARAB EMIRATES - A61AQ has a daily schedule from 0000 to 0100z on 14240 kHz with his QSL manager N1DG. He is also active around 0800z on 15 meters, looking for JA and VK stations.

IRELAND - EI4VUJ will be active on all bands, from July 7 to 19. He will be located in Leitrim County, one of the rarest of the Irish counties.

GUADELOUPE - FG/F2HE will be active until September 25. His activity will be mostly CW.

SOUTH KOREA - HL0N/3 will activate Anmyu-Do Island, IOTA AS-080, until July 7. Look for CW and SSB activity on 40, 20 and 15 meters.

PERU - OA4QV will be active using the special prefix OA176 in commemoration of 176 years of Peru's Independence. He will be active until July 31, with Peru's Independence Day taking place on July 28. SSB operations will be on 40, 20, 15 and 10 meters.

ALAND ISLANDS - Several stations will be active as OH0/N4GN and OH0W until July 10.

MARKET REEF - After their stint from Aland Islands, this group will be joined by three other OH-stations and travel to Market Reef. The group is expected to arrive here late July 10. Look for activity from OJ0/OH1VR,

and OJ0/N4GN. OJ0/OH1VE will be used during the IARU HF Championship contest (next weekend.) Besides activity on the HF and newer bands, there may be some 6 meter action as well.

AUSTRALIA - Special Event Station VI0ANARE will be active from July 1 through October 31 to mark the 50th Anniversary of ANARE, the Australian National Antarctic Research Expedition. Activity will be on 80 to 15 meters, using CW and SSB.

--ARRL DX Bulletin 29, dated 3 July, 1997

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY

Our next meeting is on Wednesday, 16th July, when George Adams, VK2WEL, will explain how easy it is for amateurs to communicate via satellite. He will provide information on frequencies, equipment, antennas and software needed to get started. Doors open at 7:00 pm and the meeting starts at 7:30.

The next project day will be on Saturday, 2nd of August so come along from 1:30 onwards and see what we are up to. This is a good time to get advice on faulty rigs, see and operate the facilities at our shack and catch up with other members.

The Society's clubhouse is located in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club, where a number of members gather for a meal before meetings. Anyone interested in amateur radio is welcome to come along.

--Simon Buxton, VK2EII, President

SUMMERLAND HAMFEST

The Summerland Amateur Radio Club's Annual Radio Hamfest, Garage Sale, Whatever will be on SUNDAY 3rd AUGUST, Commencing at 9.00 AM at the Clubrooms, 412 Richmond Hill Road, Goonellabah.
Plenty of pre-loved goodies, electronics and computers plus commercial stands.

Refreshments, BBQ, Competitions, Fox Hunt ??.

Admission $2. Bring the family. Eyeball your old mates.

Thank you for all your comments. I have saved them and will quote it
again for others to view. Ham radio is a gathering of
people with no life. Social misfits in many cases. Plus
there are those that have no power anywhere in their lives
and become Wizards of Oz in this HOBBY. I have received many
messages from hams about others hams when delt with face to face
cannot look the other party in the eye.

and will concur that

> it is pretty bad, worse than some parts of CB radio in comparason.

It is ALL true. Hams rarely have the courage to pay for their
own mistakes, they usually point fingers.

> Keep up the postings Burt, there are many more people reading them (and the
> replies) with much amusement.

But you are one of the very few to openly support me.
Many others do, but Privately.

Burt

>self-resonance) of a multi-layer coil, based on the geometry? Thanks.
>
> --- mkj

Hi MKJ.

The actual calculation is VERY complex, and is best solved by direct
measurement.

I or others can probably describe several ways to measure the effect
you need to know.

I probably still have a thirty or forty page paper written by WP
Czerwinski, and excerpts of his paper were printed in Electronics,
August 26, 1960. I'm sure you could obtain a copy from a technical
library.

Every modeling program I've tried produces VERY inflated inductor Q's, and incorrect self-resonant frequencies. I'm not sure they work at all with multilayer inductors.

Many VERY subtle effects modify the effective layer to layer capacitance, so I think you'll be unhappy with the results of any estimate or modelling program unless you are willing to accept more than two to one error. Even the calculations of single layer solenoids are almost impossible to make, and are not modeled accurately (at least with all the programs I've seen).

So as much as people may want to help you, there may be no good answer except cut and try.

> AMATEUR STATION VANITY CALL SIGN SYSTEM
> FILING GATE 3 OPENS AUGUST 6, 1997
>
>Amateur operators who meet the following eligibility standards may request a
>vanity call sign on or after August 6, 1997.
> If your application is received prior to this date or if you do not
>qualify under
>these standards, your application will be dismissed. File your request on one
>FCC Form 610-V using either, but not both, the interactive
electronically-filed
>Form 610-V or the document Form 610-V.
> To either, but NOT BOTH, the interactive electronically-filed Form 610-V
>or the
>document Form 610-V. To facilitate the processing of requests for vanity
>call signs each workday,
>electronically-filed Forms 610-V
>for which the filing fee has been received will be processed first followed by
>document Forms 610-V.
>The fee is $30. Payment may be made by check (payable to "FCC"), bank draft,
>money order or credit
>card. Do not send cash.
>USING THE INTERACTIVE ELECTRONICALLY-FILED FORM 610-V - The interactive
>electronically-filed Form 610-V is available via the FCC Internet homepage at
>http://www.fcc.gov/wtb/amradsrv.html.
> To access the instructions, click your mouse button with
>the pointer on the highlighted portion of the item for which you need
>assistance. Press your <enter>
>key to submit your application. If you have provided the required
information,
>the screen will prompt key to submit your application. If you have
>provided the
>required information, the screen will prompt you with a Fee Remittance Advice,
>FCC Form 159, that you must complete, print and mail together
>with the fee to Federal Communications Commission, POB 358994, Pittsburgh, PA
>15251-5994 .

>The form 159 and the fee must be received within ten (10) days of submitting
>your application or the application will be dismissed.
>USING THE DOCUMENT FORM 610-V - The document Form 610-V is available

* Continuation 1 of a split message *

The bottom line is that hams applying for a vanity call sign on or after September 15 must pay the $50 fee.

Payment of fees may be made by check (payable to FCC), bank draft, money order or credit card. If paying by credit card, you must also complete and submit FCC Form 159 with your FCC Form 610V. Do not send cash. Send your application package to: Federal Communications Commission, Amateur Vanity Call Sign Request, Box 358924, Pittsburgh, PA 15251-5924

If you file a paper application, remember that legibility is critical! If your application is not able to be deciphered easily by FCC personnel, you could experience a delay in processing, lose the opportunity to obtain a requested call sign or even obtain a call sign different from what you want. Be sure to include your current Amateur Radio call sign on your vanity application.

Under Gate 3, you must hold an unexpired Advanced class operator/primary station license to request a vanity call sign for your primary station. To request a vanity call sign for a club station under Gate 3, you must also hold an unexpired club station license grant listing you as the license trustee. Applicants should refer to the licensee database to verify that a

requested call sign is not already assigned. A call sign is normally assignable two years following license expiration, surrender, revocation, set aside, cancellation, void ab initio, or death of the grantee.

Using Form 610V or its on-line electronic equivalent, applicants may request up to 25 call signs in the order of preference. The first assignable call sign on the list will be the one the FCC assigns. Remember: When requesting a call sign under Gate 3 for your primary or club station, the call sign must have been unassigned for at least two years. As an Advanced class operator, you may request a call sign only from groups B, C or D.

Any call sign requested must be one designated for the region of your mailing address, as follows:

* One of the contiguous 48 states: Regions 1 to 10.
* Alaska: Regions 1 to 11.
* American Samoa: Regions 1 to 10, or Region 13 having numeral 8.
* Commonwealth of Northern Mariana Islands: Regions 1 to 10, or Region 13 having numeral 0.
* Guam: Regions 1 to 10, or Region 13 having numeral 2.
* Hawaii: Regions 1 to 10, or Region 13 having numeral 6 or 7.
* Puerto Rico: Regions 1 to 10, or Region 12 having numeral 3 or 4.
* Virgin Islands: Regions 1 to 10, or Region 12 having numeral 2.

For explanations of Groups B, C and D and the geographic regions, see Fact Sheet PR5000 Number 206S, Amateur Station Sequential Call Sign System (or see The ARRL Letter Electronic Update, August 16, 1996, available on the ARRLWeb at http://www.arrl.org/). For more information on the vanity call sign program, see Fact Sheet PR5000 Number 206V Amateur Station Vanity Call Sign System.

If you file before the opening date or do not qualify under the Gate 3 eligibility standards, your application will be dismissed. General, Technician Plus, Technician, and Novice class operators will become eligible to request vanity call signs under Gate 4. The FCC has not indicated when it plans to open Gate 4.

For further information, contact the Consumer Assistance Branch at 800-322-1117 or call the FCC's National Call Center, 888-225-5322 (CALL FCC).

MIR HAM RADIO BACK ON THE AIR

Ham radio aboard the Mir has been getting some casual use again as the three-man crew continues efforts to get life back to normal aboard the Russian space station. General ham radio operation was suspended in the immediate wake of the mishap last week that damaged one of the Mir's compartments. But this week, US ham-astronaut Mike Foale, KB5UAC, expressed "thanks for all your good wishes" to hams around the world. The British-born Foale is using both 2 meters and 70 cm "sparingly," according to SAREX Principal Investigator Matt Bordelon, KC5BTL. Werner Staubitzer, VO1CAT, in Pouch Cove, Newfoundland, reports he had "a lengthy QSO" with Foale over the weekend. Foale told VO1CAT that the crew was "feeling fine and is making

repairs to the damages as best they can while waiting for the required parts to arrive." Ray Webber, ZS6RSW, in Pretoria, South Africa, reports that he connected to Mir on packet (using the 145.800/200 split-frequency pair) on June 28.

Foale and his Russian cosmonaut crew mates again found themselves in crisis mode at mid-week when the spacecraft lost attitude control. In a packet message to MIREX CEO Dave Larsen, N6CO, Foale related how, after the alarm sounded, "we go rushing from one dark module to another, trying to look out windows, and point the solar arrays. The station dies very quickly if we don't do this." Foale compared the situation to "being on a yacht at sea, with the wind changing all the time, and having to rush around pulling sails down, or putting them up, before a storm comes."

Foale said the attitude failure has made the crew very wary of the next Progress rocket docking, set for Monday, July 7. "Life on Mir is characterized by long periods of monotonous, serene calm, and short interludes of extreme frenzy, I am learning," Foale said.

The Progress rocket will supply cables and a special plate to fit over the hatch of the damaged Spektr science module. The crew will try to make cable connections to get the station back up to full power. Another Russian crew is scheduled to fly up in August to seal the leak and put the Spektr module back on line. Meanwhile, Foale and the cosmonauts are working on their new--but faulty--oxygen generator to get it back on line. They are using incendiary candles to supply oxygen temporarily.

Although the cosmonauts have begun practicing the repair routines, they and Foale still have a lot of time on their hands, and much of that is spent in darkness to conserve electricity. This means Foale has time for hamming, and, so far, no one's objected to his using a few watts of power for the radio. While Mir remains a space station in trouble, Foale is providing Amateur Radio with an intimate view of the danger and drama.

KB5UAC plans to operate frequently, whenever NASA and Moscow are not using their main communication channels. Look for him on 145.800 MHz, operating split. Occasionally, while Mir is over the US, you also may find him on 145.985 MHz (simplex).

To track the Mir spacecraft, check out http://liftoff.msfc.nasa.gov/temp/Mir_loc.html. The page presents a graphical representation of Mir's location and updates every minute.--thanks to Roy Neal, K6DUE, for his contribution to this report

BLAHA: HAM RADIO "A USEFUL TOOL" ABOARD MIR

Mir alumnus John Blaha, KC5TZQ, says ham radio aboard the Russian space station has turned out to be more than a morale booster. "Now, more than in the past, it's a useful tool to get information back and forth," Blaha said over the weekend--just before heading for Russia to monitor Russian efforts to resolve the latest Mir crisis.

Blaha said the lack of power aboard Mir is the most important concern since it's impeding the crew's ability to do scientific research. "What occurred is significant," he said of last week's accidental collision between the Mir and an unmanned Progress rocket during practice maneuvers. Repairing the crippled space station will involve "space walks and a lot of complexity." He speculated that it could be a matter of months before the power situation on the space station is back to normal. Despite the troubles, "the Mir is safe," he said. The life support systems are operating and "they can jump into the Soyuz." While the Soyuz would serve as a lifeboat for a US astronaut aboard Mir, Blaha said the Soyuz is simply the vehicle the Russian crew members normally used to get up and down. "It's a very good vehicle," he said. "It's their shuttle." Blaha said the crew "did the right thing" when they realized the Progress rocket had punctured the Mir's outer shell. "They, in effect, saved the Mir space station," he said.

Blaha said that after some briefings in Houston, he was scheduled to travel to Russia "just to find out where they're headed" in resolving the Mir's troubles. He said he expected to be there for a week or two. The last-minute change in plans meant Blaha was unable to participate in Field Day with Oklahoma's Lawton/Ft Sill Amateur Radio Club, W5KS. Mark Ewell, KC5IZN, had invited Blaha and his wife, Brenda, to Oklahoma June 26-29 to visit a space camp for youngsters at Cameron University and to speak at a Chamber of Commerce luncheon the day before FD, and to get on the air with the club. As it turned out, Ewell said, Blaha turned in inspiring appearances at the camp and luncheon before heading back to Houston. H

Subject: HELP!!! Emperor TS5010 Needs Modulation & Power Mods!!!!!

Can anyone help me with improving the performance of my 5010?
It is sorely lacking in modulation and power on all modes.
I realize that the easiest thing to do would be to use an amp,
but that just not a possibility at this time, so doing the work
on the radio itself is my only option.
Thanks in advance.
swfalcon@citilink.com

P.S.
My power source, coax and antenna system
are all in perfect shape. The radio just
needs help.

> work from 160 through 10 meters. They reference an article on it in QST.
> Any information would be appreciated.

Yes, it's true. the article was in QST and the Antenna does sound to
good to be true. If you'll read the article, you'll note that while
height and longer wire make the antenna better, it is not very efficient
when short and low especially on the low bands. But it does Match on all
frequencies. The QST article is in the November 1995 issue, page 22.

Looking at the article it's one *@#$#@% fine concept!

Now, if someone will only put one up and do a report on it.!

+-----------------------------------------------------------------------+
| |
| Mail generated on your system for a destination within the |
| 'z2.fidonet.org'-domain, was detected at this site and classified as |
| unwanted. |
| |
| If you bona-fide responded to a listserver your message unfortunately |
| also falls under that category as such type of mail is not accepted |
| nor distributed from here either. |
| |
| 'fidonet.org' is a hobby domain where individual |
| people run individual mailers using PSTN-technology out of their own |
| pocket and every such message adds to the cost. |
| |
| Therfore the original message is bounced back to you at the gate. |
| |
| Fidonet-participants are victimised by thousands of bogus listserver- |
| subscriptions and you may very well be a side-victim of this. |
| |
| In that case your cooperation would be greatly valued by crossposting |
| this mail to the postmaster/owner of the mailing-list/list-server with |
| a request to kick any subscription coming the 'z2.fidonet.org'-domain. |
| We are bothered here by it as much as you are now. |
| |
| If you are residing in the USA then the following notice |
| may apply to you. Please read it attentively! |
| |
| +-------------------------------------------------------------+ |
| | By US Code Title 47, Sec. 227(a)(2)(B), a computer/modem | |
| | /printer meets the definition of a telephone fax/machine. | |
| | By Sec. 227(b)(1)(C), it is unlawful to send any unsolicited | |
| | materials to such equipment. | |
| | | |
| | By Sec.227(b)(3)(C), a violation of the aforementioned | |
| | section is punishable by action to recover actual monetary | |
| | loss, or $500, whichever is greater, for each violation. | |
| | | |
| | I will report any violation 'abuse@postoffice.us'. | |
| +-------------------------------------------------------------+ |
| |
| Kind regards, |
| |
| Ward Dossche |
| Fidonet Coordinator for Europe |

Subject: Q: calculating coil capacitance?

Jeff Herman replied to Roy Lewallen:
>
>>>this is a homebrew newsgroup.
>>>build it, measure it, modify it!
>
>>So homebrew precludes being analytical and is restricted to cut-and-try?
>
>The analysis comes into play prior to construction. The product will
>differ from the model, so differences are measured, then modifications
>are made. Thus, as Jim stated, "build it, measure it, modify it!"
>

I'm absolutely with Roy on this one:

DESIGN IT FIRST and then "build it, measure it, modify it"

... which is actually what the original questioner wanted to do.

>>How sad for amateur radio.
>
>That's why we're referred to as "amateurs." The "professional radio service"
>is next door.

We're referred to as "amateurs" for a variety of reasons, including:

1. We don't get paid.

2. We don't have access to professional equipment.

3. Most of us have less time than professionals, because our full-time
job is something else.

4. Because of #1, #2 and #3, we sometimes have to cut corners.

5. We can't be bothered to think and learn how to do it right.

I can live with #1, #2, #3 and even #4 - but if "amateur radio" had to
mean #5 as well, I'd be outa here.

Fortunately there are people like Roy around to remind us that it
doesn't have to be that way.

* Continuation 1 of a split message *

period.

3) Entry Classification: Single Operator and Multioperator, Two
Transmitter. Multioperator stations shall keep a separate log for
each transmitter. Multioperator stations must have at least 10
minutes between band changes. Use of helpers or spotting nets by
single operator entries is not permitted. Single operator entrants
may only have one transmitted signal at a time. Output power must be

limited to 150 watts for eligible entries.

4) Contest periods:

RTTY: 1800 UTC July 19th to 0600 UTC July 20th, 1997

Multioperator stations may operate for the entire 12 hour period.
Single operator stations may operate 10 out of 12 hours. Off times
must be at least 30 minutes in length and must be clearly marked in
the log.

5) Mode: RTTY only in RTTY parties.

6) Bands: 80, 40, 20, 15 and 10 meters only. You may work a station once per band. Suggested frequencies are: 3585, 7085, 14085, 21085 and 28.085 on RTTY.. Try 10m at 1900Z and 2000Z 15m at 1930Z and 2030Z etc.

7) Exchange: Operator name and station location (state, province or country).

8) Valid Contact: A valid contact consists of a complete, correctly

copied and legibly logged two-way exchange between a North American station and another station. Proper logging requires including the time of each contact. Regardless of the number of licensed call signs issued to a given operator, one and only one call sign shall be utilized during the contest by that operator.

9) North American Station: Defined by the rules of the CQWW DX Contests with the addition of KH6.

10) Scoring: Multiply total valid contacts by the sum of the number of multipliers worked on each band. Multipliers are states (including KH6 and KL7), Canadian Provinces (Canadian multipliers are: British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Quebec, New Brunswick, Nova Scotia, PEI, Labrador, Yukon, and NWT) and other North American countries (do not count USA, Canada, KH6, or KL7 as countries). Non-North American countries do not count as multipliers, but may be worked for QSO credit.

11) Reporting: Send North American QSO Party RTTY logs to: Ron Stailey K5DJ, 504 Dove Haven Dr., Round Rock, Tx 78664-5926.. Entries must be postmarked not later than 30 days after the party to

be eligible for trophies and awards. An proper entry consists of (1)

a summary sheet showing the number of valid contacts and multipliers

by band, total contacts and multipliers, total score, team name (if any), power output, name, call sign, and address of the operator, station call sign and station location; (2) a complete legible log of all contacts (including dupes marked as such) with indication of multipliers claimed; (3) a separate check sheet for each band; and (4) a list of all claimed multipliers worked on each band. Logs, summary sheets and check sheets may be home made or patterned after those published periodically in the NCJ. Logs may be submitted

on disk in the form of files generated (.BIN & .SUM) by WF1B program

or MS-DOS ASCII files consisting of all information in (1)-(4) above

if generated from a program other than RTTY by WF1B. All entries should include a written, signed statement of "Fair and Ethical Operation".

12) Team Competition: Team competition is limited to a maximum of 5 single operator stations as a single entry unit. Groups having more

than 5 members may submit more than one team entry. PRE
REGISTRATION
REQUIREMENT: To qualify as a team entry, the name, call sign of
each
operator, and call sign of the station operated should the operator
be a guest at a station other than his own (e.g. K1NG op by WF1B)
must be registered with K5DJ. The team registration information
must be in written, telegraphic or e-mail (k5dj@easy.com) form and
must be received before the start of the NAQP. There are neither
distance nor meeting requirements for a team entry. The only
requirement is pre-registration of the team.

13) Penalties and Disqualification's: For each unmarked duplicate
QSO, you lose that contact plus an additional three contacts; for
each QSO for which you are not in the other stations log, you lose
that QSO plus an additional one contact; and for each QSO for which
the log data is incorrectly copied in any respect, you lose that
contact. Entries with score reductions greater than 5% will be
disqualified. Any entry may be disqualified for illegibility,
illegal or non-ethical operation. Such qualification is at the
discretion of the NCJ Contest Review Committee.

14) Awards: A plaques will be awarded for the high score in each
of the following categories:

- Single operator RTTY--Plaque Sponsor: Glenn Vinson, W6OTC
- Multioperator RTTY----Plaque Sponsor: RTTY by WF1B

Certificates of merit will be awarded to the highest scoring
entrant from each State, Province, and North American Country.
With at least 200 QSO's.

COMMENTS: We now have an RTTY NAQP. It's a short 12 hour sprint - a
non-DX blast for low power stations. (150W max.) The object is to
work as many North American stations as you can, so that makes it a
rate-contest first, and let mults fall where they may. There are
band mults, so there'll be lots of mults to keep track of. This kind

of contest will help you to smoothe out the rough edges of your
operating skills by keeping you alert and quick. If your choice mode

is CQing, you'll get into a routine of "one-key-itus" when using
logging software, especially when using "RTTY by WF1B" and callers
use "DE" in front of their calls. If you want to increase your
skills
with "Search and Pounce", its a matter of how quickly you find CQs
and how short to make your call and exchange. Try not to break the
standard exchange, such as sending your call and the exchange before

contact has been established. It disrupts the rhythm of the routine
and thus slows the rate of the CQer. If the station you're working
is
loud, send exchange just once. Hint: when assigning "F-key"
messages,

set the exchange for a one-time shot. If there is lots of QRM, hit
the F-key twice but be sure you set a proper break between the
double
(like <CR> or space).

From: "Bryan" <ks4hr@injersey.com>
Subject: Need opinions on Dual Band base station verticals

My 2 cents.. Stay away from the CushCRAP! Both the Diamond and the Comet
are good. I use a Diamond X-500 and X-200 for packet, both work very well!
I have the X-500 at 60 feet for packet on 2m and 70cm. and the X-200 at 30
feet for packet on 70cm and voice on 2m.
The X-500 has been up for 4 years with Belden 9913 cable, SWR is the same
as the day it went up. X-200 3 years, same thing. Both are on the air 24/7
in BBS operation.
The Comet looks like a copy of the Diamond so I would expect the same from
one of them.

+-----------------------------------------------------------------------+
| |
| Mail generated on your system for a destination within the |
| 'z2.fidonet.org'-domain, was detected at this site and classified as |
| unwanted. |
| |
| If you bona-fide responded to a listserver your message unfortunately |
| also falls under that category as such type of mail is not accepted |
| nor distributed from here either. |
| |
| 'fidonet.org' is a hobby domain where individual |
| people run individual mailers using PSTN-technology out of their own |
| pocket and every such message adds to the cost. |
| |
| Therfore the original message is bounced back to you at the gate. |
| |
| Fidonet-participants are victimised by thousands of bogus listserver- |
| subscriptions and you may very well be a side-victim of this. |
| |
| In that case your cooperation would be greatly valued by crossposting |
| this mail to the postmaster/owner of the mailing-list/list-server with |
| a request to kick any subscription coming the 'z2.fidonet.org'-domain. |
| We are bothered here by it as much as you are now. |
| |
| If you are residing in the USA then the following notice |
| may apply to you. Please read it attentively! |
| |
| +-------------------------------------------------------------+ |
| | By US Code Title 47, Sec. 227(a)(2)(B), a computer/modem | |
| | /printer meets the definition of a telephone fax/machine. | |
| | By Sec. 227(b)(1)(C), it is unlawful to send any unsolicited | |
| | materials to such equipment. | |
| | | |
| | By Sec.227(b)(3)(C), a violation of the aforementioned | |
| | section is punishable by action to recover actual monetary | |
| | loss, or $500, whichever is greater, for each violation. | |
| | | |
| | I will report any violation 'abuse@postoffice.us'. | |
| +-------------------------------------------------------------+ |
| |
| Kind regards, |
| |
| Ward Dossche |
| Fidonet Coordinator for Europe |
```

* Continuation 1 of a split message *

Lumbovskyi Island (EU-161) and Novaya Zemlya Island (EU-35). They were hoping to receive a special callsign (which did not happen) when they activate Bolshoi Ainov Island (a new IOTA, EU-???). Instead the team will be signing homecall/1 and the team callsigns of UE1QQQ/1 and UE1ZNF/A. This DXpedition is dedicated to the 60th anniversary of renaming North Russian flotilla to Northern Navy (Severnyi Flot). QSL via UA1ZJW, P.O.Box 72, Severomorsk-1, 184600, Russia /or via RA1QQ, P.O.Box 24, Cherepovets, 162627, Russia.

SPECIAL EVENT. Look for VI0ANARE to be active from July 1st to October 31st to celebrate the 50th anniversary of the Australian National Antarctic Research Expedition (A.N.A.R.E.). The suggested frequencies are:
SSB - 3620, 7075, 14175 and 21175 kHz
CW - 3532, 7020, 14052 and 21052 kHz
WARC bands by request and all frequencies are "+/-" QRM. QSL direct only to VK4AAR (Alan guarantees a fast reply, but no bureau facilities are available for him). Bureau cards go to VK4ARB.

SPECIAL PREFIXES.....
The city of Calgary (AB, Canada) will host the World Police/Fire

Games. Industry Canada assigned a special callsign prefix "CG6" for use by amateurs in Calgary area. This special prefix is valid now through July 4th.

Watch for amateurs in Thunder Bay, Ontario, using the CJ3 prefix instead of their VE3 prefix, and also the CK3 prefix instead of the VA3 prefix, during July 12-31st, in celebration of the Scouts Canada Jamboree.

USI ALERT. Randall, KD8JN, will activate Hatteras Island July 5-12th, as KD8JN/4 for the "United States Island Award" program. Hatteras Island as an USI number of NC-005S (also an IOTA of NA-067, Grid Square FM-25 and is located in Dare County). Activity will be on all bands. Suggested frequencies are: 3785, 7260, 14260, 18128, 21260, 24950 and 28460 kHz. QSL via the bureau or direct with a SASE to: Randall Phelps, 1226 Delverne Ave SW, Canton, Ohio 44710-1306 USA

USI ANNOUNCEMENT. The United States Islands Awards program (USI) will kick-off the summer with an operations from Northern Canada (Ops: KC7FVA, KC7KHU, and NL7TB). VY1USI will be active before and during the Canada Day Contest from YT-002, 03, 04, and 05 and from a couple of "new ones" starting around 1700z on June 30th. The team will focus on the emerald green Yukon River in Whitehorse. VE7USI operation will commence from Atlin Lake (Northern BC) on July 2nd around 1700z from several "new ones" through July 4th. For a feeling of being there, try: http://users.yknet.yk.ca/bbdo/cascade/about.htm
Photo QSLs will be available from NL7TB (SASE to: J Reisenauer, 23406 East Kennedy Rd., Benton City, WA 99320).

VK9L, LORD HOWE ISLAND. Jun/JH4RHF, Kumiko/JR4DUW (YL) and Hiro/JR4PMX are planning a trip to Lord Howe for their summer vacation during the IOTA Contest weekend. The operation itself will be from July 24-29th or so. The callsigns they hope to be assigned are; VK9RH, VK9YL and VK9MX, respectively (not licensed yet). Please note these callsigns are for VK9L-land. Activity will be 80-10 meters, SSB/CW. There will be some 160m and RTTY activity, if there are many requests. QSL via JH4RHF, for VK9RH and YL (or operation by these two). QSL via JR4PMX for VK9MX (or op by JR4PMX).

XW, LAOS. It has been reported that Zorro, JH1AJT, is in Laos with a group that will be active now until July 2nd. This is not Zorro's first time to Laos as he was there in December, 1989, as XW8KPV. Reports indicate they will operate on as XW1A and on SSB as XW1 (YEP! That is the callsign). The group will be operating on 6 through 160 meters. QSL via JH1AJT.

YJ, VANUATU (Activity on 6 meters!). Stuart, YJ8UU, will be active from Vila over the next 3 years. Look for him to begin activity around July 19th. Operations will be on all bands including 6 meters. His station consists of an Icom 706; antennas are a Gap R5 vertical and a 3 element Delta loop for 6 meters with 2 elements for 20 meters. He will be active daily at 0630z on 50.110 MHz. QSL via ZL2HE.

Z2, ZIMBABWE. "THE 59(9) DX REPORT" states Cedric, N9YXA, will be active on 160-10 meters, mainly SSB, from August 3-21st while providing communications for a church convoy. Callsign is yet to be announced.

ZF, CAYMAN ISLANDS. The Cinco Nueve Contest Group has announced early that they will operate as a Multi/Single from Little Cayman Island as ZF2RV during the CQWW CW Contest, November, 1997. Operators will be:
Al, K7AR (ex-WB2TMP, op at YK0A); Lee, N7NU (ex-WB7SND, op at XR0Z);
Mark, N7MQ (ZF2MC, and ex-N7MCA); Ron, WJ7R/ZF2RV; and Gene, K7DBV (ZF2BV).
ZF2RV contest QSLs are via AA6BB/7; cards for all other QSOs between November 24th and December 3th (including ZF2RV) go to each operator's home call, CBA or via W7 Bureau.

ZP, PARAGUAY. Ernesto (GADX Bulletin Editor), LU6BEG, will be operating from Asuncion as ZP5/LU6BEG from July 9-13th. Operations will be on 80-10 meters CW/RTTY/BLU. During the IARU Contest, he will team-up with Renato as a Multi-Op station using the callsign ZP5XF or ZP0M (to be confirmed). QSL ZP5/LU6BEG to Box 1589 - 1000 CF - Argentina and ZP5XF/ZP0M to Box 1937, Asuncion, Paraguay.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 28.8k/14400/9600/2400/1200 and leave a message with the Sysop or send InterNet Mail to one of the two following addresses:
kb8nw@barf80.nshore.org -or- aq474@cleveland.freenet.edu
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch.
To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

>signal a 3/2?

No, I'm using a "wire beam" strung between two buildings on campus.
Wire beams can't be rotated - I'd have to rotate the building, and
the university won't allow me do that.

>I'd watch that shell at the university,they're keeping an
>eye on your cheapskate ass. Can't even afford legal internet access,have
>to route it through a shell.

You've got me perplexed again. I've got a UH UNIX account, and use a
Wyse terminal hardwired to the UNIX machine from my office. Whatever
you see when you finger me is what I've been using for about 6 years
now. I guess you must not be familiar with UNIX.

>to didge that marriage question,let's check something...1/4/54,

Yep, still single! I'm 43 and my girlfriend is about 20 years younger.
Eat your heart out!!!

>Perry
>University of Guam...that's interesting.Why are you single and living in
>Guam?

I'm in Hawaii, James!

>I'll get back with you later,I'm going to make you my project boy.

Without even lifting a finger I've got you wasting your time. This
is great! We've at least got one thing in common: We're both pro-
code. There's a CW email list if you're interested: Send a note to
majordomo@qsl.net and only write subscribe cw your@email.address
and you'll be hooked up.

Take care, friend,
Jeff KH2PZ / KH7 <--- that means I'm in Hawaii, James.

Subject: Looking for Catalog(s)

I'm new to ham radio, and I'm currently looking to buy my first rig.
I would like to get an idea of features/prices/etc. that are available
before I actually buy anything. Are there any ham radio catalogs, or
other sources, that have this information? Contact #'s, URLs greatly
appreciated.

From: mark russo <mrusso@hoflink.comNO.JUNKMAIL>
Subject: LOOKING for FM TRANSMITTER , Kinematix "IMP II"

Hello to all.
I'm looking for this little tunable FM transmitter (87-108 MHz)that
was made in the late 1960's by Kinematix, model number "IMP II".
It's 3 x 1-1/8 x 2-3/4 in size.
It's black and has a slide power switch on the front.
A microphone could also be plugged into the top. It was tuned
with a plastic tuning tool. This gem is in the 1967 Lafayette
Radio catalog for $39.95.
Does anyone out there have one of these at the bottom of a draw?
If so, and if it's in working order I'd like to buy it from you.

Let me know how much you want for it.
Please e-mail me direct at: mrusso@hoflink.com
THANKS, Mark N2FLF

NOTE If you want to E-mail me, you MUST REMOVE the NO.JUNKMAIL in my address. It should read: mrusso@hoflink.com I'm trying to stop the unwanted Junk Mail. SORRY for the inconvenience but it's getting out of hand.

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

From: onlinebiz@mlmail.COM
Subject: THIS IS IT!!

Hello!

How would you like a Software Disk that creates Thousand of LEADS for your Primary focus program and Tons of CASH in your mailbox all at the same time?

This powerful Software System is going through ALL of the MLM companies like nothing before. This is because it doesn't compete
with anyone's primary program...it enhances and compliments it!

If you decide to participate, you will never have to scratch around for someone to present your MLM program to again. You will have THOUSANDS of LEADS as a result of using this Software System. And the Big added Bonus is that you will also have CASH in your mailbox EVERY DAY, because Each of the Thousands of Qualified Leads generated by this Software System PAYS YOU $20 each to send them the info about your Networking program. Do the math...it will blow you away and keep you awake tonight!

This is NOT MLM. This is a one time expenditure. There is no monthly order obligation, no company with which to share your bonuses and commissions, no pre-ordained pay periods, no terms and conditions that you must follow. There is no company to go bankrupt, change their compensation plan, raise the price of their products, draft your checking account, hold your commission checks. There is no company... except for you. YOU ARE THE COMPANY!

You don't need to have a computer to do this, just access to one. You don't have to be in business to do this! But if you are, you'll never find a better way to promote your program, product or service.

And ... ANYONE... ANY AGE... ANY COUNTRY can participate!
No Social Security #, no Federal ID #, and no US address is required!

You have nothing to lose by checking this out... the risk is all mine. If you decide not to participate, show it to someone who's financial status is important to you. They will thank you every time they go to their mail box.

For full details hit REPLY NOW!

> Thanks.

I've had success using a combination of Liquid Wrench, a hammer
to loosen any rust, and a scissors or hydraulic jack. Be careful
with the jack that you don't seriously bend any cross members and
that you don't apply enough force to cause pieces to let loose.
If you work at it slowly, you should be able to get the sections
apart. Of course, it is always fun to be doing this sort of stuff
while your 40+ feet in the air!

73 and be careful,
Todd

Well Greg, I understand how you feel, however, it's a two way street. To have
a store with no "retaped" or returned merchandise would mean a strict no return policy.
What are we supposed to do with stuff people buy and for no reason other than they
decide they don't like or need it return it for full refund? Please be carefull with how
broad a brush you paint Radio Shack stores or employees. There are aprox 1700 privately
owned RS stores like mine. Everything in my store had to be bought and paid for so when
you return something I hav

1038. Message *bounced*

| |
| Mail generated on your system for a destination within the |
| 'z2.fidonet.org'-domain, was detected at this site and classified as |
| unwanted. |
| |
| If you bona-fide responded to a listserver your message unfortunately |
| also falls under that category as such type of mail is not accepted |
| nor distributed from here either. |
| |
| 'fidonet.org' is a hobby domain where individual |
| people run individual mailers using PSTN-technology out of their own |
| pocket and every such message adds to the cost. |
| |
| Therfore the original message is bounced back to you at the gate. |
| |
| Fidonet-participants are victimised by thousands of bogus listserver- |
| subscriptions and you may very well be a side-victim of this. |
| |
| In that case your cooperation would be greatly valued by crossposting |
| this mail to the postmaster/owner of the mailing-list/list-server with |
| a request to kick any subscription coming the 'z2.fidonet.org'-domain. |
| We are bothered here by it as much as you are now. |
| |
| If you are residing in the USA then the following notice |
| may apply to you. Please read it attentively! |
| |
| +-------------------------------------------------------------+ |
| | By US Code Title 47, Sec. 227(a)(2)(B), a computer/modem | |
| | /printer meets the definition of a telephone fax/machine. | |
| | By Sec. 227(b)(1)(C), it is unlawful to send any unsolicited | |
| | materials to such equipment. | |
| | | |
| | By Sec.227(b)(3)(C), a violation of the aforementioned | |
| | section is punishable by action to recover actual monetary | |
| | loss, or $500, whichever is greater, for each violation. | |
| | | |
| | I will report any violation 'abuse@postoffice.us'. | |

Subject: "BIG WIND" COVERING HIS TRACKS !

Our little friend who is so concerned about other fellow's "balls" is
scared silly. 41 message cancellations demonstrate how scared he really
is! Any message where he has threatened someone or used bad language is
being cancelled. Now he is making posts trying to look innocent, but we
all know better.

What a big bully. The "big terror" of the newsgroups is now trying to
look "picked on." For all of his hot air, he sure looks silly now.

And the funniest thing is: HE THINKS SOMEONE ACTUALLY CARES !

No need to worry about him; he just hit the jackpot!. He'll get some
do-gooder "civil rights" attorney and sue the city for millions, claiming
"discrimination against the disabled" or some such nonsense.

Tell you what, you cite where 47 U.S.C.F.R Part 97 states that interfering

with any communication, including unlawful communications is unlawful, and I'll provide facts. Otherwise, the quote of your material above seems to apply just as much to you as to the folks to whom you're responding.

Yes, especially *YOURS*, according to your flawed logic if the CB'ers showed up on 14.313 (no different than 28.0xx) then all of the *LICENSED* operators would be in violation for causing interference. I hardly think so. (Though if might be hard to differentiate who's who)

Prove me wrong , I want "fact" not "opinion"

As far as being a "vigilante" , I use the term "self policing" , in my area at least, persons who cause malicious interference on vhf/uhf get tracked down and an end is made to their operation. Unfortunately it's much more difficult to do on HF.

confidence. The recall vote tally was 135 ''yes'' votes and 257 ''no''
votes. Barton was a driving force behind the establishment of the
Vermont Amateur Radio Council.

Upon learning of Barton's death, former ARRL New England Division
Director Bill Burden, WB1BRE, had words of praise. ''Justin gave it
his all during his tenure. It was my pleasure to work with him on
several projects, and I will miss Justin's wit and insight.'' Burden
said Barton ''believed in family first and hobbies second.''

Services will be held Monday, July 14, 9 AM, at St Catherines
Church, Norwood, Massachusetts.

`application fee' is highly misleading. Although the payment must be
included as part of a complete application, it is only kept if a
requested call is awarded under the program and will be refunded by
the FCC if no call is issued and upon a written request for refund.

Regards,
--

From: pschleck@novia.net (Paul W. Schleck K3FU)
Subject: AutoFAQ Sent to Over 5100 rec.radio.amateur.misc Posters

In September of 1996, I started discretely mailing an introductory
letter to all posters to rec.radio.amateur.misc. This is accomplished
via a special Perl script originally written by comp.infosystems.www.*
FAQ maintainer Tom Boutell, who uses it on
comp.infosystems.www.authoring.html, to send each poster such a letter
once, and only once. It runs from a Unix cron job on my host every

morning at 2 AM and queries my local news server via NNTP for the headers of any new articles posted to this newsgroup. About 15-25 new posters on average receive the message each day.

Here's a breakdown of recipient's reactions to the letter over the last 9 months. All feedback was politely replied to, usually with a version of the rebuttal arguments given below:

A half-dozen people strongly objected to it (spamming and junk mail seems to have rubbed sensibilities raw with regard to receiving unsolicited, possibly automatically-sent, E-mail; experiences in other newsgroups demonstrate it to be "just barely redeeming" in terms of dealing with the massive influx of new users)

Another half-dozen thought it was a bit wordy (the message needs to be "one size fits all" and some recipients might be very confused without some background explanation; the letter attempts to get to the point as quickly as possible, but pragmatically is also optimized to minimize the amount of followup correspondence I have to engage in)

Another half-dozen insisted that they never posted to rec.radio.amateur.misc (all of them without exception did post, but it was from following up in another newsgroup to a cross-post, and not realizing what was on the Newsgroups line)

About two-dozen complimented me for posting it (which I appreciate)

The overwhelming majority did not respond, indicating one of several possibilities:

- they approve of it
- they disapprove, but not enough to bother replying
- the mail was misdelivered (I got a few bounces, often from deliberately munged Reply-To: addresses to ward off "spam")
- they don't care

So, my impression is that the project is at least a qualified success, and should continue in its present form. At the very least, it seems to be substantially non-controversial. Having primed the previous-poster database with over 5100 E-mail addresses, the chances of bothering an experienced reader with an unneeded introductory message is greatly reduced, and will get even smaller with time. In fact, it's probably been about 3 or 4 months since I've received any negative E-mail.

I'd be interested in hearing your opinions on this project. I'd also like to solicit volunteers to initiate similar projects in some of the special-topic newsgroups (perhaps starting with my previous-poster database as a baseline, and modifying the letter to contain pointers to the more topic-specific FAQ's and information; the .digital.misc, .homebrew, .equipment, and .policy newsgroups seem to be good candidates for a project of this type).

For those who are curious, here is the current version of the letter, slightly modified in response to feedback as the project progressed.

Subject: WELCOME to rec.radio.amateur.misc

Hello,

This brief E-mail message is automatically sent to every new poster (as of September 21, 1996) to rec.radio.amateur.misc (and its associated mailing list, Info-Hams). Please note that even if you don't read or subscribe to rec.radio.amateur.misc, you may have inadvertently crossposted to that newsgroup by following up to an existing article crossposted to many newsgroups, including rec.radio.amateur.misc (as the default behavior of most newsreaders is to inherit all of the target newsgroups of the previous article when following up). You should only receive this message once. My apologies if the program contacts you twice, perhaps at two different accounts. This is not a flame (criticism), only an attempt to help newcomers get the most out of the newsgroup. As this message is sent automatically, it is also not necessarily a criticism of your posted article. The information provided here represents good consensus advice that has been gathered over the years by experienced participants like myself. I hope you will consider it in that spirit.

Please look at the following resources, which will often answer your questions without the need to post at all. Every post to the newsgroup consumes the time and effort of readers all over the world, and your cooperation is essential to make the newsgroup useful for everyone. A little effort and expense on your part can save a great deal of effort and expense for others.

Thanks!

* * *

1. The Amateur Radio Frequently Asked Questions (FAQ) List, formerly maintained by Diana Carlson, KC1SP and Ian Kluft, KO6YQ, has recently been resurrected by John Seney, WD1V. The majority of the original content of the FAQ remains the same, but now it's a hypertext document with hundreds of links to radio-related sites and is a significant resource to all students of amateur radio - regardless of their license status. It may be accessed via your World-Wide Web (WWW) browser (such as Netscape, Mosaic, Lynx, or Internet Explorer) at:

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

It is also available in text form. Send an message to John's E-mail address below with the words "HAM FAQ" on the subject line.

Please direct any submissions, feedback, or administrivia regarding the FAQ to john@wd1v.mv.com.

2. The Amateur Radio Elmers Resource Directory is an excellent supplement to the FAQ as it's a directory of "Elmers" (mentors, experts, and gurus) for amateur radio who can answer questions via Internet

E-mail and via the various resources (such as special-topic FAQ Lists and WWW pages) that they maintain. It is accessible both as a WWW page:

http://www.novia.net/~pschleck/elmers/

and as flat text files:

ftp://ftp.novia.net/customers/pschleck/elmers/

Please direct any submissions, feedback, or administrivia regarding the Amateur Radio Elmers Resource Directory to elmers-request@novia.net.

3. The Guide to the Personal Radio Newsgroups, written by Jay Maynard, K5ZC, provides an excellent overview to all of the USENET newsgroups devoted to amateur and CB radio. It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro

4. A Guide to Buying and Selling on Usenet, also written by Jay Maynard, contains a number of good pointers for reading and posting articles concerning the buying and selling of radio and radio-related equipment on the USENET newsgroup rec.radio.swap (which is the only appropriate forum for such articles). It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/swap-guide

Please direct any submissions feedback, or administrivia regarding the above two resources to jmaynard@nwpros.com.

5. The national amateur radio society of the United States, the American Radio Relay League, has a presence on the Internet. You may access their comprehensive and informative home page at:

http://www.arrl.org/

or their automated file server by sending a message with the word "help" to:

info@arrl.org

(They also have information about amateur radio organizations in other countries.)

6. Read the newsgroup first to see if your question has already been answered. You may also view, and search for keywords in, older news articles (going back to March of 1995) at the DejaNews archive:

http://www.dejanews.com/

Many topics have been discussed before, often in great depth, but the articles have expired from your local news server. Services like DejaNews allow Usenet a much longer "institutional memory" that can greatly benefit both new and experienced users.

7. If you do post to the newsgroup, give as many details as possible. After you post, read the newsgroup for a week or two to see all replies

to your posting. If you wish, ask for responses by E-mail and offer to post a summary if others are interested in the answer to your question.

8. Remember, USENET newsgroups are based on the idea of mutual aid. USENET only works if we put as much into it as we get out of it. Good luck with your experiences with amateur radio and the amateur-radio-related USENET newsgroups.

73, Paul W. Schleck, K3FU

Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap,rec.radio.amateur.misc

For Sale Or Trade (looking for scanner)
Realistic HTX-202 2mtr HT in very nice condition, Comes with box, manual, nicad pak, strap, speaker mic, charger, manual. I will sell for reasonable offer, but I really prefer to trade for a scanner. Here are a few of the units that I am presently looking for:
Regency MX-7000
Uniden BC-760
Uniden BC-2500
Realistic 2004
Realistic 2026
Realistic Pro-39
Realistic Pro-43
Realistic Pro-46
Any of the above must be in likewise very good condition as well as be full 800mhz coverage (no gaps). Only interested in trades within the U.S.A. Interested parties please respond via e-mail. Thanks for reading my post.
Regards,
Ray Miller N2NJK

1043. Ft. Tuthill swap, plus...It is very sad to see someone lose his mind

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-13 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <5q9afi$3tr@dailyplanet.wam.umd.edu>
Source record: 193737

I was wondering about Tuthill - I know it's a big swap.

How much are tickets? How much to tailgate?

One day at a time, or, like Dayton, one price for all
three days?

Now...

It has been very sad to watch certain individuals spew the
undigested and partialy digested contents of their colons
all over the newsgroups.

It is truly nauseating, gives ham radio a VERY poor
appearance (but is it radio? isn't EVERY newsgroup klike
this?), and constitutes a huge waste of resources.

Please refrain from answering trolls with additional
followups to the newsgroups.

So anyone who can tell me about Tuthill?

Thanks!

DIVISIONAL NEWS

The Australian Communications Authority (formerly the SMA) is putting the register of all Australian Radiocommunications licencees (including Amateurs) on its World Wide Web page. All details will appear there, including the licencees' postal addresses, even if they have been suppressed in Amateur callbook.

Last Sunday the President announced that the VK2 Council had decided to obtain a special Post Box for those Members who did not wish to have their address shown on Internet. This is now in place and Financial Members who wish to take advantage of this Member Service should apply to the office for the necessary application form. On receipt of the completed form, and the nominal fee of $6, full details of Box No. and full

postal address etc. (which is totally different to our normal office Post Box) will be advised. The confirmation will also include a "tear off" portion to forward to the Australian Communication Authority (formerly S.M.A.) requesting amendment of the address listing. Mall received for those Members registered will be re-directed by the office.

NOTE: This special facility, which is only available to VK2 W.I.A. Members who have been duly registered, is for legitimate Amateur Radio correspondence - it must not be used as a general mailbox address for magazines, personal mail etc.

--submitted by Eric Fossey VK2EFY, Divisional Secretary.

AFFILIATED CLUBS NEWS

The next net is on Sunday 20 July, on 3.595 at 9.am.
Attention Affiliated Clubs and WIA members Nominations for the new quarterly VK2 division individual award have been called.

The theme for this quarters award is for Services to Amateur Radio.

Nominations should reach Amateur Radio House before 7 July, giving particulars that make this WIA member stand out so that Council can

make the correct choice at the July Council Meeting
The value of this quarters award is $40.00 awards are only for WIA members.

Members of council are excluded.

--Ken Westerman VK2AGW, VK2 division Affiliated Clubs Officer and Councillor responsible for Western and Riverina Areas of NSW

JULY TRASH AND TREASURE SALE

Start saving now- start packing up that equipment that's surplus to your needs!

The Trash and Treasure Sale to be held on 27th July will be held at the Dural transmitter site in Quarry Road. The Institute will be clearing surplus stock - plenty of it - and welcomes others to set up tables and car-boot sale points.

There will be a barbecue on site, and there is plenty of space to set upchairs and picnic tables. Bring the family.

We have not had a day out at Dural for many months - why not come along?

There will be more Information in the broadcast in coming weeks. Stay tuned!

--Pat Leeper VK2JPA Councillor.

Memebers of the Dural Technical Committee that your next activity at Dural will be on Sunday 13th July.

-- Tim Mills VK2ZT

WICEN NEWS

The Annual General Meeting will be on Saturday 9th August, at the Hornsby RSL Club, starting at 11am. It will be preceded by an RCOs' meeting, to appoint two Deputy State Coordinators. There will be a practical demonstration of the GRN system, and as an added inducement some door prizes will be given away, namely gift vouchers upon a well-known electronics retail chain and a year's membership of WICEN. Furthermore, Simon Trotter VK1AUS will be speaking on his experiences in RAYNET -- WICEN's equivalent in Great Britain -- and the ACT.

Are you concerned about the future of WICEN? Is WICEN doing a good enough job? How will WICEN be involved in the forthcoming Olympics? It's easy to control WICEN's destiny; all you have to do is fill out a nomination form, included in your newsletter. Remember, WICEN is composed of "Amateurs who care".

A new event on the WICEN calendar is the VRA Annual General Meeting, at Randwick, over the weekend of 27-28th September.

Saturday 12th July sees the running of the Colo Classic Endurance Ride, the communications for which is being organised by Blue Mountains WICEN. Three more operators are still required to cover all checkpoints, and a meal will be provided from the BBQ when operators complete their checkpoint. It is a 24-hour event starting at midnight on Friday, and checkpoints will be open for a maximum of 8 hours. If you would like to help out, please contact Neil Fallshaw, at work on (02) 9342-1589, at home on (047) 51-6449, or e-mail as "neil_fallshaw@optus.com.au".

The Central Coast AGM will be held on 25th July, at the Central Coast Rescue Squad Base, Rose St, Wyong, starting at 8pm.

The Hunter region will be providing safety communications for the "CanTeen Annual Troy Newman Cycle Trek" from Sydney to Newcastle on 27th July; the event co-ordinator is Pauline VK2GTB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

SPACE NEWS

MIR BACK ON AIR

Ham radio aboard the Mir has been getting some casual use again as the three-man crew continues efforts to get life back to normal aboard the Russian space station. General ham radio operation was suspended in the immediate wake of the mishap last week that damaged one of the Mir's compartments. But this week, US ham-astronaut Mike Foale, KB5UAC, expressed ''thanks for all your good wishes'' to hams around the world. The British-born Foale is using both 2 meters and 70 cm ''sparingly,'' according to SAREX Principal Investigator Matt Bordelon, KC5BTL. Werner Staubitzer, VO1CAT, in Pouch Cove, Newfoundland, reports he had ''a lengthy QSO'' with Foale over the weekend. Foale told VO1CAT that the crew was ''feeling fine and is making repairs to the damages as best they can while waiting for the required parts to arrive.''

Ray Webber, ZS6RSW, in Pretoria, South Africa, reports that he connected to Mir on packet (using the 145.800/200 split-frequency pair) on June 28.

Foale and his Russian cosmonaut crew mates again found themselves in crisis mode Wednesday, July 2, when the spacecraft lost attitude control. In a packet message to MIREX CEO Dave Larsen, N6CO, Foale related how, after the alarm sounded, ''we go rushing from one dark module to another, trying to look out windows, and point the solar arrays. The

station dies very quickly if we don't do this.'' Foale compared the situation to ''being on a yacht at sea, with the wind changing all the time,
and having to rush around pulling sails down, or putting them up, before a storm comes.''

Foale said the attitude failure has made the crew very wary of the next Progress rocket docking, set for Monday, July 7. ''Life on Mir is characterized by long periods of monotonous, serene calm, and short interludes of extreme frenzy, I am learning,'' Foale said.

The Progress rocket will supply cables and a special plate to fit over the hatch of the damaged Spektr science module. The crew will try to make cable connections to get the station back up to full power. Another Russian crew is scheduled to fly up in August to seal the leak and put the Spektr module back on line. Meanwhile, Foale and the cosmonauts are working on their new--but faulty--oxygen generator to get it back on line.

They are using incendiary candles to supply oxygen temporarily. Although the cosmonauts have begun practicing the repair routines, they and Foale still have a lot of time on their hands, and much of that is spent
in darkness to conserve electricity. This means Foale has time for hamming, and, so far, no one's objected to his using a few watts of power for the radio. While Mir remains a space station in trouble, Foale is providing Amateur Radio with an intimate view of the danger and drama. KB5UAC plans to operate frequently, whenever NASA and Moscow are not using their main communication channels. Look for him on 145.800 MHz, operating split. Occasionally, while Mir is over the US, you also may find him on 145.985 MHz (simplex).

To track the Mir spacecraft, check out http://liftoff.msfc.nasa.gov/temp/Mir_loc.html. The page presents a graphical representation of Mir's location and updates every minute.

(thanks to Roy Neal, K6DUE, for his contribution to this report)

--ARRL Space Bulletin 22, dated July 2, 1997

DX REPORT

CYPRUS - 5B4JE is active on SSTV. Also, look for 5B4/G4RHM during July.

GHANA - 9G1AA will be active until the end of 1997. He is working at the Dormaa Hospital.

UNITED ARAB EMIRATES - A61AQ has a daily schedule from 0000 to 0100z on 14240 kHz with his QSL manager N1DG. He is also active around 0800z on 15 meters, looking for JA and VK stations.

IRELAND - EI4VUJ will be active on all bands, from July 7 to 19. He will be located in Leitrim County, one of the rarest of the Irish counties.

GUADELOUPE - FG/F2HE will be active until September 25. His activity will be mostly CW.

SOUTH KOREA - HL0N/3 will activate Anmyu-Do Island, IOTA AS-080, until July 7. Look for CW and SSB activity on 40, 20 and 15 meters.

PERU - OA4QV will be active using the special prefix OA176 in commemoration of 176 years of Peru's Independence. He will be active until July 31, with Peru's Independence Day taking place on July 28. SSB operations will be on 40, 20, 15 and 10 meters.

ALAND ISLANDS - Several stations will be active as OH0/N4GN and OH0W until July 10.

MARKET REEF - After their stint from Aland Islands, this group will be joined by three other OH-stations and travel to Market Reef. The group is expected to arrive here late July 10. Look for activity from OJ0/OH1VR, and OJ0/N4GN. OJ0/OH1VE will be used during the IARU HF Championship contest (next weekend.) Besides activity on the HF and newer bands, there may be some 6 meter action as well.

AUSTRALIA - Special Event Station VI0ANARE will be active from July 1 through October 31 to mark the 50th Anniversary of ANARE, the Australian National Antarctic Research Expedition. Activity will be on 80 to 15 meters, using CW and SSB.

--ARRL DX Bulletin 29, dated 3 July, 1997

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY

Our next meeting is on Wednesday, 16th July, when George Adams, VK2WEL, will explain how easy it is for amateurs to communicate via satellite. He will provide information on frequencies, equipment, antennas and software needed to get started. Doors open at 7:00 pm and the meeting starts at 7:30.

The next project day will be on Saturday, 2nd of August so come along from 1:30 onwards and see what we are up to. This is a good time to get advice on faulty rigs, see and operate the facilities at our shack and catch up with other members.

The Society's clubhouse is located in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club, where a number of members gather for a meal before meetings. Anyone interested in amateur radio is welcome to come along.

--Simon Buxton, VK2EII, President

SUMMERLAND HAMFEST

The Summerland Amateur Radio Club's Annual Radio Hamfest, Garage Sale, Whatever will be on SUNDAY 3rd AUGUST, Commencing at 9.00 AM at the Clubrooms, 412 Richmond Hill Road, Goonellabah.
Plenty of pre-loved goodies, electronics and computers plus commercial

stands.

Refreshments, BBQ, Competitions, Fox Hunt ??.

Admission $2. Bring the family. Eyeball your old mates.

HOPE TO SEE YOU ALL THERE CHEERS BRIAN VK2UBF PUBLICITY OFFICER I . A . R. S

BLUE MOUNTAINS AMATEUR RADIO CLUB

The Blue Mountains Amateur Radio Club will be holding its July meeting next Friday night in hopefully the staff room but we are not sure, so stay

tuned. I apoligise to thoes who came to our June meeting and did not realise we had moved rooms. Next month we will thoroughly signpost where we are.

The July meeting will have no guest speaker as we will be having a general disscussion on the future direction of the club, so if you have any ideas or suggestions bring them along and have your say.

Supper is served half way through the night to alow a little face to face ragchewing.

This months Fox Hunt will be put back 1 week to the third Friday in July

as most of our hunters will be at the horse enduro on the normal night. Remember visitors are welcome and if you dont want to take part in the hunt come to the fox site and watch all the fun.

Most members can be contacted via VK2-RBM on 147.050 +600

--Submitted by Adrian VK2-BFN.

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

THE NEXT MEETING OF THE GROUP WILL RE ON TUESDAY, 15 JULY AT AMATEUR RADIO HOUSE, PARRAMATTA.

THE MEETING WILL BE A SPECIAL WORKSHOP ON TEST EQUIPMENT AND CONSTRUCTION TECHNIQUES, LED BY RICHARD VK2ARS. SPECIAL EMPHASIS WILL BE PLACED ON CONSTRUCTION AND USE OF HOME BREW TEST GEAR.

DONT FORGET THE TUESDAY ACTIVITY NIGHTS ON 144MHZ AND OF COURSE THE GROUP'S SUNDAY MORNING NET ON 146.550 MHZ FM AT 11.00 AM.

SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

THE HORNSBY & DISTRICT ARC.

The next meeting is our informal get-together on Tuesday, July the 8 th. 1997. at 8:00 pm. in the Mount Collah Community Centre, Pierre Close, Mount Colah. (near the eastern entrance to the railway station.) Followed by the formal meeting on Tuesday July the 22 nd. 1997. At this meeting the guest speaker will be David VK2NH a councillor of the VK2 Division of the WIA. the talk will discuss what the VK2 Division is doing at
present and what it intends to do in the future. Visitors will be most welcome.

The training classes are now closed for this course. However feel free to phone Tony VK2BTL on 9497 3383 or John VK2WRT on 9807 2490 regarding future classes.

The Club conducts a net each Monday night at 8:00 pm. on VK2RNS.

frequency is 147.250 with a positive offset. Feel free to join in or if you
are a listener set your reciever to 147.250. We would like to hear from you, or better still we would like to meet you at one of our meetings.

If you would like more information about the Club, write to HADARC., Post Office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 2490.

--John. W. Turner VK2WRT Publicity Officer.

The Annual General Meeting of the Liverpool & Distict Amateur Radio Club will be held at the Scout Camp on Cambridge Road Glenfield next Wednesday the 9th of July at 7.30 P.M. for a prompt 8.00 P.M. start. This is probably the most impoftnt meeting of the year, so if you are interested in how your Club is run, this is your chance to have your say.

The following Saturday the 12th of July is our annual Auction. Goods will be checked in from 10 A.M. and buyers will be able to view the goodies from 11 A,M. The Auction will commence at 12 Noon sharp A sausage sizzle and drinks will be available as usual, so don't forget to retrieve some of that treasure from your shack that you no longer have use for: bring it along and don't forget your wallet

See you at the AG,M, and also at the Auction

The directions on how to get there are:

Cambridge Road runs off the Southern end of Moorebank Road (the road through Hoisworthy Army Camp). A LADARC sign will be placed near the road side in front of the entrance gate to the Scout Camp.

BROADCAST ROSTER

Next Sunday, 13th July 1997

Morning:
Announcer: Tony VK2TJF
Engineer: Richard VK2SKY

Evening:
Announcer: Peter VK2CZX
Engineer: Colin VK2HCT

If you would like to submit a news item for inclusion in the VK2 Divisional

broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to wiansw@sydney.dialix.oz.au

The deadline for submissions is 2pm on the Friday preceding the
broadcast; if sending by packet or Internet, please allow for forwarding
delays in the network.

If sending printed copy, please double space your text, leave wide
margins, and use a plain font such as Arial or Helvetica for clarity.
Please proofread your text, check your grammar and punctuation, avoid
using shorthand and abbreviations, and use the exact words you wish
the announcer to say on air. Remember, the more care you take in
preparing your news item, the better the announcer will read it.

You don't read well. A Tech or Tech+ operating on a repeater segment of 2m or higher can freely access a *crossband repeater* station licensed to someone with the appropriate class license with an output in the 10m repeater sub-band. The repeater can be under automatic control, no control operator needs to be present. Repeaters are not permitted to operate below the repeater band segment of 10m. Period. So if the Extra is operating a repeater to bands below 10m, he is in violation of the regulations. But that isn't what he's doing. Below 10m, he is operating a remotely controlled station. (Remote base is not a term recognized by the FCC.)

Any amateur station may be remotely controlled, but it may not operate under *automatic* control unless it is operating as a repeater in sub-bands where repeater operation is permitted. A control operator must be in control of the station at all times that it is not operating as a repeater. The station may only operate to the limits of that control operator's privileges. If he is an Extra, the remotely controlled station can operate anywhere he wants, but if he is a Tech, he can't operate the remotely controlled station below 6m. If he's a Tech+, he can't operate it outside his authorized frequencies, and that does *not* include the portions of the 10m band above 28.5 MHz. If a General, he can only operate inside General segments. Etc.

Now the station license holder has three choices about how the station is operated. First, he can outright loan the station equipment to another amateur. The station then operates under the station call sign of the person to which the loan has been granted, and under the operating privileges of that person's operator license class. This case is very simple to understand.

Second, he can designate someone as control operator and let that person operate the station. The station continues to operate under the station license holder's station call sign, but its operations become limited to those permitted by the operator license class of the designated control operator. In essence, the station license holder has loaned his station to the other operator even though it retains the station license holder's station call sign. The station owner need not be present.

The only real difference between the two cases of transfer of control is that in the latter case both the station license holder and the control operator are jointly responsible
for its operation. In a closed system, there can be multiple designated control operators, each limited to operating the remotely controlled station under the privileges granted by his license class. This type of operation is common for club stations operating in some sort of event so that scoring occurs under a common call sign. It does a Tech no good below 30 MHz, of course.

(Note that there is something subtle going on here. An amateur has two different authorization instruments, his operator's license, and his station license. They are printed on the same piece of paper, but they are legally separate things. The call sign is assigned to the *station* and not the operator. Operating privileges belong to the operator, not the station. Only when the station license holder (not to be confused with the equipment owner, who

can be different) and the station control operator are the same person do the two authorization instruments merge. Since this is the way most amateurs routinely operate, the distinction isn't often noted or understood. But when we start dealing with repeater or shared access remote controlled stations, it becomes important.)

Thirdly, the station license holder can allow persons to operate the station under *his* control as *third parties*. He is in control, and the station can transmit anywherehis operator license class permits. It doesn't matter a whit what license class the third party has. The third party can even be unlicensed if he is physically present or accessing the station via non-amateur means. Or if the third party is a Tech or higher, he can access the station on a frequency where he is authorized to operate a station in auxillary service, IE 222 MHz or above. Note well that accessing a remotely controlled non-repeater station on 2m is illegal because auxillary operation is not permitted there, and such access is considered auxillary operation.

Regardless, a Tech accessing this remotely controlled station is operating as a third party, and third party regulations fully apply. That means, for example, that he cannot talk with a station in a country with which the US does not have a third party agreement. So if your Extra is allowing Techs to talk with European stations on HF, he is in violation of the regulations. Note that the FCC has been known to turn a blind eye to this violation of third party regulations when the third party is an amateur, but it is a violation of the letter of the regulations nonetheless.

A further note. Ordinary operation through a repeater station is not considered third party operation of the repeater station. This can cause some confusion. A station in repeater operation can relay amateur signals without falling under third party rules. Stations *using* the repeater may fall under third party rules if they are conveying their own third party traffic. Note that it is the station performing third party traffic, not the repeater station, which is operating under third party rules in this case, IE if you let your wife or kid talk on your radio, *your* station is in third party operation, but the repeater you are using is not. But a repeater phone patch is always third party operation *for the repeater station*, and requires that a control operator for the repeater be present. That's because the repeater station is directly participating in third party traffic in that case and not merely relaying amateur signals.

A station under remote control operating outside of a repeater sub-band is not in repeater operation, and doesn't enjoy this freedom from third party regulations. The two systems may appear to operate identically, but they fall under different regulatory restraints. This may appear to be splitting hairs, but that's what happens when you start dealing with law and lawyers. Common sense often goes out the window (though in this case it all does make sense if you think it through.)

So to summarize, stations acting as repeater stations relaying amateur signals do not need a control operator present. And this includes *crossband* repeaters which transmit on frequencies outside the operating privilege range of some of the stations which they repeat. Remotely controlled non-repeater stations *always* require a control operator to be present. That control operator can be one and the same as the person accessing the remotely controlled station. In that case, the remotely controlled station's operating privileges are limited to those of that operator. But if the person accessing the remotely controlled station is *not* the control operator, then the remotely controlled station is engaged in third party

operation, and all third party regulations apply.

What's this mean to the Tech? If he is accessing a crossband repeater from 2m to 10m, the repeater can be under automatic control, and the Tech can talk to European stations, IE to stations in countries with which the US has no third party agreement. But if he is accessing a remotely controlled non-repeater station, he is either A) limited to the privileges of his operating class if he is acting as control operator, or B) is operating as a third party under the supervision of the control operator, and all third party limitations apply, IE he can't talk to Europeans. (I use Europe as an example because the US doesn't have third party agreements with most European nations.)

Err..How would it? Alternator whine comes from the alternator, not
the ignition system....

>Is there something wrong with my alternator/battery and how can I fix
>this?

One guess: It's eaten one phase of its diode trio. As such, there's
a big 120 degree hole in its rectified 3-phase output. Put a scope
on the alternator output terminal and look. Or buy a new
alternator...

Further steps include a massive choke on that terminal.

That's supposed to be ADF: Automatic Direction Finder. It is meant
to be used for LF beacons (below the MW broadcast band) but it can
also be used to point to broadcast stations. Most pilots don't use
these beacons to navigate while in straight and level cruise over the
continental US, so they sometimes use it to tune in MW broadcast
stations if they're bored.

In this situation, where a license may well be on the line, I'd NOT advise anyone to rely on the interpretation of some FCC "phone answerer". I would insist on a signed opinion from someone at a "level of authority" in the particular branch (enforcement) concerned.

Your "recollection of a phone call I had with (someone) at FCC" will be a worthless defense.

>etc.) is not a problem.

All you need is a SINAD meter and a signal generator. I use an IFR1200 which combines both in one unit. Connect the SINAD meter to the radio. Connect the signal generator to a reference antenna. Now with the computer turned off, generate a signal and adjust the level to achieve a 12 db SINAD reading from the radio under test. Note the dbm level of the signal generator. Now turn the computer on. Readjust the signal generator to return the SINAD reading to 12 db. The difference in signal generator levels between computer on and computer off is the amount of desense you are suffering.

Note don't move the radio or the antennas during this test, and try to keep your body in the same position so that you don't change the relative near field relationships while doing the measurement.

Here's a little song. With apologies to "The Police"

K I N G O F G A I N
(sung to the tune of "King of pain")

There's a little grey Drake on my desk today
It's the same old rig as yesterday
I have a quarter wave with a nice ground plane
It's a little short and there is no gain

I have stood here before inside radio shack.
With the clerk saying nothing but a painful "ACK!"
I guess I'm always hoping I won't return again
But it's my destiny to be the king of Gain

There's a little iron on the roof today
That's my stuff up there.
There's a new GDO on my roof today
That's my stuff up there.
What's the impedance, I just cannot say
That's my "V" up there.
It's got twenty traps, well you don't say
That's my "V" up there.

I have stood here before inside Radio Shack.
With the clerk saying nothing but a painful "ACK!"
I guess I'm always hoping I won't return again
But it's my destiny to be the king of Gain

My antenna tuner just don't seem to work.
That's 7 Megahertz
My wife keeps saying I'm a total jerk.
That's 7 Megahertz
Why am I hearing a McDonalds clerk ?
That's 7 Megahertz
Why is my lawyer wearing a goofy smirk ?
That's 7 Megahertz

I have stood here before inside Radio Shack.
With the clerk saying nothing but a painful "ACK!"
I guess I'm always hoping I won't return again
But it's my destiny to be the king of Gain

There's a signal on 49 with the sidebands washed out
There's CW on 160 metres ham no doubt
I hear a man calling out from Albania

I think I am going insainia

King of gain
I will always be the king of gain ....

(Here is an alternative Chorus for Hams)

I have sat here before inside of my ham shack
I am so tired I want to hit the sack
I guess I'm going to miss a night's sleep again
'Cause my destiny to be the king of gain

Tell me what you think =-)

And please, don't bother mentioning some little typo. To quite

If anyone starts an organization that is organized more fairly and could be more effective than ARRL, I will join it. But I would like to see details about how it will be put together in such a way that it would circumvent some of the problems that are part of any organization. I offer that perhaps Mr Sorter might find his ends better served to try to address whatever wrong ARRL very well may have done him. ("You will never put the puzzle together if you keep the pieces in the box -- author unknown.)

In the meantime, seeing no major improved organization on the horizon, I will stick with the one we have, support it, and do my best to improve it where I can.

The solar report from Tad Cook, K7VVV, arrived too late to make the deadline for The ARRL Letter, Vol 16, No 28. Here's Tad's report:

SUN IS FLAT!

Solar seer Tad Cook, K7VVV, in Seattle, Washington, reports: Conditions are still flat. The average solar flux, sunspot number and planetary A index hardly varied from last week to this week. Because short-term forecasts are based upon the previous solar rotation, no activity is predicted for the next month, except for a possible slightly unsettled period around July 23 or 24.

W7ZT in Arizona reports he didn*t even notice any seasonal sporadic E skip on the higher frequencies over the Field Day weekend. W4VOS offered some comparisons of previous solar cycles. He noted that it is mostly true that each odd-numbered solar cycle was greater than the previous cycle. We are now awaiting activity from cycle 23, so this is a cause for some hope. But with a chart from a 12-year old issue of a DX newsletter which showed cycle data provided by KH6BZF, W4VOS commented that cycle 9 around 1850 was smaller than cycle 8, and cycle 5 around 1805 was much smaller than cycle 4. Will cycle 23 be the third cycle in history to break this rule? Let us hope not.

Sunspot numbers for July 3 through 9 were 12, 12, 11, 11, 26, 25 and 31 with a mean of 18.3. The 10.7-cm flux was 69, 69.7, 69.7, 71.8, 71.7, 71.2 and 70.2, with a mean of 70.5, and estimated planetary A indices were 7, 7, 4, 4, 14, 5, and 11, with a mean of 7.4.

Readers who wish to comment can email the author at tad@ssc.com.

When replying to this message, please send e-mail directly, BUT, you must first remove the *NOSPAN* from my e-mail address above. I'm tired of learning how to earn $50,000 in a month! :)

I need information on an Alliance HD-73. I bought one a couple weeks ago, but the previous owner was unablt to locate the paperwork. If you have a manual, I'd be glad to pay for a copy. But I really need to know a few things:

What is it worth? (Did I get ripped off?)

What are the specifications of the rotor?
Maximum weight, wind load, torque, etc.

I MAY be putting this thing under my HF antenna this weekend and would certainly appreciate it if I can avoid making a mistake.

Greg N8JMS

If it used to work but now you have alternator whine in the AM radio
then the diodes are most likely the problem.

Greetings All,

I just wanted to let you know that the N3XGR ARES-RACES Index Page was updated this morning. I am still in the process of finding the links that don't work, and throwing them out, as well as adding new links. I want as many groups as possible to be listed and I appreciate your comments/criticisms/additions. Thanks.

C'mon Hans, the only ones who "imposed" their "own standards" on
anybody was Bellsouth:

>Thank you very much for taking the time to inform us of this
>situation. In accordance with BellSouth.net's Appropriate Use
>Policies, the Internet services account of kd4cdb@bellsouth.net will
>be canceled.

Apparently KD4CDB violated his terms with his provider. Keeping the
behavior a secret from the provider does not make the violations go
away, and notifying the provider of the behavior does not impose
anything on anybody.

73,
Mike, KK6GM

Perhaps we could have a contest sponsored by Compaq and they would give away a free laptop to the person that could guess to the nearest day/hour/minute when Fisher *AGAIN* would copy and paste his tired old nonsense (It currently appears about every 5 to 6 weeks.) To add even *MORE* excitement, Compaq could offer a free laptop to *EVERY* contestant in the highly highly highly unlikely event that Fisher came up with something new. ;)

I guess one should do what they're comfortable with, however I'd bet
that your odds would be FAR greater on winning the multi-state Lottery
than having the FCC fine you or suspend your license for interfering
with an unauthorized CB transmission in one of the amateur bands.

> an autopilot ?
>

If you're connecting it to a db9 connector, connect the yellow wire to pin 2, the orange wire to pin 3 and the black wire to pin 5. You would need to connect the power/data module to an external power source, so connect the red wire to a 12 VDC battery and jumper another wire from the black wire and connect it to battery ground. Have fun.

Hi for the money and time you would probably be better off trying to buy
a kit from the US or from a US company. The circuit is simple BUT it is
tedious to build. ....Lloyd KD4HTW

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text

you can say "ha ha" and of course on voice you would sound like an idiot

if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

w6sg@qsl.net
(415) 883-9789
POBox 151231, San Rafael, CA 94915-1231

Free Public Meetings:

Monthly General Membership Meeting:
First Friday of each month beginning at 7pm in the Conference Room
at Kaiser Hospital, Building 2, the first building on the left
after turning right from Novia Albion Way onto Monticello Road.
Schedule: 7pm social; 7:30 Business Meeting called to
order; 8:00 Program Presentation; 9:00 social.

Weekly Sunday Morning Net
Everyone is invited to the San Rafael Red Cross station w6sg of MARC
at 712 5th Street slightly East of Lincoln. Schedule 8am open doors
and put out coffee; 8:30 informal social; 10 am operate w6sg net
control

of the emergency preparedness net; 10:30 cleanup; 11 am close up.
These meetings offer a small congenial group for introducing
yourself; meeting local amateur radio operators, and learning about
amateur radio.

Monthly Business Meeting
Restricted to members, all members welcome to attend, (you may come
and become a member at any meeting). Third Thursday of most months
at 7:30 pm at San Rafael Red Cross (see above). Meeting lasts about an
hour.

Coming Events:
MARC VE Testing...All levels, June 7, Sept 6, Dec 6 1997 test site
Kaiser
Hospital Building 2; Registration 0845, Testing 0900
For more information: Send SASE to Radio Exams,POBox 176 Petaluma,CA
94953-0176. Candidate Requirements: A photo id, or two non-photo ids.
Original and copy of current license. Any original valid CSCEs and
photocopies, radiotelegraph license if held. Medical exemptions.
Fee is $6.05, except Novice is free. Test Dates may change.

Nets:
Licensed Amateur Radio Operators are invited to check in to the
emergency practice nets as guest and get on the roll call.

Sunday Morning Net:
10:00 am PDT (local time) w6sg 3.915 MHz LSB
10:15 am PDT w6sg 147.33 +600 PL 203.5 MHz FM

Monday Evening
7:30 pm PDT RACES 147.33 +600 PL 203.5 MHz FM
8:00 pm PDT ACS 147.33 +600 PL 203.5 MHz FM

Memberhip Information
MARC is a membership corporation. All power ultimately rests
with the vote of the membership. You are invited to join.
Membership is granted upon payment of dues:
Regular Individual: $25
Family Membership: $30
Student/Retired: $20

The MARC Membership Chairman is Pete Wolford, N6IYU
POBox 151231, San Rafael, CA 94915-1231
Your money will be accepted and your membership begun upon
receiving your funds by mail, or at any meeting.

Services
To support the amateur radio service mission, MARC provides
a free technical library open to the public, technological educational
and training programs in it's classroom, and supports
FCC license VE testing programs for (free novice exams) for
nominal charge to members and public alike.
The MARC offers free use of it's amateur radio station w6sg

to licensed amateurs who are members or their guests.
The MARC maintains the MARS station at Hamilton field for
use by licensed amateurs in the armed forces, and provides the
amateur radio operators who become trained and licensed to
operate the MARS station for the benefit of the personel of
the armed forces.

Listowner:
Don Phelps, n6mce is the listowner, administrator and
moderator of marcnet, and Marketing Chair of MARC.
If computer automation leaves something to be desired,
send Don n6mce compliments and appreciation or even an
inquiry about MARC at:

don.phelps@juno.com and begin the subject line "MARC".

==========
Welcome to the Magellan Amateur Radio Repeater
Network (MARRN) Mailing List!
==========
==========

IMPORTANT NOTICE:

THIS IS A FREE MAILING LIST SUBSCRIPTION SERVICE.
Thought I'd say that up front. I've noticed that once
anybody reads the word "subscription" they always think
they have to cough up money in some form or another.

If you received this mailing without subscribing to
this list, then somebody has subscribed for you. I
do not add anyone to this list without a subscription
request. Read below for unsubscription information.

This list has been setup, courtesy of Al Waller, K3TKJ
of QSL.NET. If you have a homepage, or thinking of
setting up one, consider making qsl.net your home.
Check it out at http://www.qsl.net/.

Please follow strict "netiquette" when sending any
information to this list.

If you have any comments about this list, please send
them to my attention at kf6giu@qsl.net <Benjo Totanes>.

==========
==========

How to use this list

To send messages to the list, send them to
marrn@qsl.net

To subscribe to the list, send a message to
majordomo@qsl.net with the following command in the
BODY of the message (NOT the SUBJECT, leave the subject
field blank):

subscribe marrn <your email address>

To unsubscribe again, follow the above and simply replace
the "subscribe" command with "unsubscribe".

Information about the MARRN list

Primarily, this list has been set up to discuss issues
regarding HAM radio and issues relating to the Magellan
Amateur Radio Repeater Network. Other messages will be
allowed -- as long as they relate to the whole group and
not directed at a single individual.

Who can subscribe? Anyone who is interested with the
group's activities.

About MARRN

Magellan Amateur Radio Repeater Network (MARRN) is a
non-profit Filipino-American HAM Radio group based in Los
Angeles California, USA. Currently, our repeater inter-tied
network covers most of So.Cal (from Ventura to San Diego
Counties to Tijuana, Mexico) approximately 275 miles of
coverage, currently the widest coverage of any Fil-Am Ham
radio groups in the United States. We are working on the
completion of our radio link to San Francisco, CA area and
eastward to Las Vegas, NV , targeted for 2nd Qtr 1997.

Licensed Fil-Am amateur radio operators from California are
welcome to join. For information or membership to the club,
contact Jim Pastor at ko6dm@qsl.net.

Current Club coordinated amateur radio repeater frequencies:

1285.475 MHz - Santiago Peak, Orange/Riverside/San Bernardino
1285.550 MHz - Mount Otay, San Diego area
1285.600 MHz - Mount Lukens, Los Angeles area
1287.700 MHz - Eagle Rock, Los Angeles Remote Base

>>>> info ppares
==========

Welcome to the Pikes Peak ARES List Server!
District 14 ARES, El Paso and Teller Counties, Colorado

==========

This automated list server will automate what has been done manually
now
for over a year. Thanks to Al Waller, K3TKJ, at QSL.NET, for hosting
this list. Check out his server at http://www.qsl.net/.

This PPARES list is intended to serve those registered with Pikes Peak
ARES, aka District 14, Colorado Section. This district encompasses
all
of El Paso and Teller Counties in Colorado. District 14 is one of
twenty-nine districts in this ARRL section. Contact Larry Dunn, N9HSW
(ldunn@rmi.net), for information about ARES. Contact Rob Roller,
WB7WHT
(wb7wht@qsl.net) for information about this list.

Some Info about District 14 Meetings and Nets:

There are no regularly scheduled ARES meetings. However, there are
fairly regular EC/AEC meetings which are called by the EC when
necessary.
In general they are held about once per month. Listen to the
District
14 ARES Net for the date/time of the next meeting. If you can't make
it
to the meetings, there are several on-the-air nets that you are
encouraged to participate in:

* Tuesdays, 1900 on 146.97- Pikes Peak FM Assn repeater - District 14
ARES Net
* Sundays, 0800 on 3928 kHz (80 meters) - Statewide ARES HF Net
* Sundays, 0830 on the Colorado Connection - Statewide ARES VHF Net
* Mondays, 1900 on 144.22 MHz, USB - Colorado ARES Two-Meter SSB Net

* Daily, 2000 on 146.97- Pikes Peak FM Assn repeater - Southern
Colorado
Traffic Net
* Daily, 1230 on 146.97- Pikes Peak FM Assn repeater - Severe Weather
Net
(during severe WX season)

On the Internet, the Colorado Section of ARES has a web page at
http://www.usa.net/ares/ares.htm. On this page, you can get some
reference information like who is the EC in which district and the
times
of the district's on-the-air net(s). There are also bulletins related
to
Colorado ARES on the page as well as a list of what's coming up on a
section-wide level.

You can also subscribe to the Colorado ARES e-mail list by sending a
message to majordomo@rmsd.com, and typing in the body of the message:
subscribe aresco.

The Pikes Peak ARES web page is at http://www.qsl.net/wb7wht/dist14.htm.

For those with packet radio, current ARES information is available by
connecting to the District 14 ARES Cluster (located at the
Hewlett-Packard building in Colorado Springs) on 144.93 MHz. Its
callsign alias in ARES14.

>>>> info programit
The PROgramit! list has been set up for
people who have built or who are interested in building my very
inexpensive computer interface to control and download almost any
scanner on the market. Information about the project is currently posted
at http://www.geocities.com/SiliconValley/Way/1522. It will soon be
moved to the qsl-net server. At that time, I will post a link to the SW
as well.

The purpose of the list is to:

1. Stimulate interest in project building and in this particular
project. I hope that more people will take on the project knowing that
others are around to help out. I will be checking the list many times
each evening and often on weekends to see if I can be of help.

2. Share your success story(ies) and describe any problems that you
overcame or any special construction technique you used. I have learned
a few new ones from the first people that built already.

3. Keep you informed of the latest updates and to bounce ideas for new
features off you.

4. Collect the best of your ideas to incorporate into the SW. Now how
often do you get that opportunity?

5. Share any follow-on SW that members develop. For example, if you have a way to convert some database to the format used in PROgramit!, please share this with the group.

6. Share information about how to wire the interface into specific radios. I will incorporate this into the WEB page as well.

I hope you will build up the interface and become a contributor to the project and to this list. 73s

John Montalbano

This is the Sarasota County, Florida, ARES/RACES mailing list. This
list
is used to inform Sarasota County ARES/RACES members of local ARES/RACES
activities, as well as discuss ARES/RACES topics of local interest.

For more information on Sarasota County ARES/RACES, please visit the
Sarasota Emergency Radio Club Web Site, at
http://home1.gte.net/wd4ahz/serc.htm
and go to the ARES or RACES pages for more details.

>>>> info vintage-radio
Thank you for your interest in the Vintage Radio List. I am sure that
this
list will prove beneficial to anyone who is interested in the
collection,
restoration, and operation of vintage radio equipment. While this list
will
deal mainly with American-made amateur radio receivers and transmitters,
other makes are welcome so long as they fit the category of "vintage".
To
qualify for vintage status a set must be 25 years old and preferably
contain some vacuum tubes. This category can include military, home
broadcast sets, commercial equipment and homebrew equipment. Any
homebrew
equipment using vacuum tubes and operating CW or AM will be considered
"vintage" equipment no matter what the age. Accessories such as keys,
antenna tuners, wattmeters, test equipment, etc. is also considered a
part
of the Vintage hobby and will be welcome if it is at least 25 years old.

I sincerely hope that you will join our group of vintage enthusiasts.
With
your help we can make this a great List. If I can answer any questions
that
you may have please contact me at >wa4kcy@qsl.net.

A special "thank you" to Al Waller, K3TJK, for hosting the QSL Net Vintage
Radio List and providing it free of charge to all who want to
participate.

73,

Andy Howard, WA4KCY

... true, and remember the body tissues do not bear too much absorbed energy. This is another hint to magnetic coupling. High energy HF can cause severe damages - remeber the cellular phone debate. Remeber what your microwave oven does to your food!

Actually, pacers are self-powered, only the control can be taken from external devices. Frequencies form some kHz on do nort stimulate muscle and nerve tissue (I thimk, there is a book by an author named Katz dealing with these basic elements of physiology very well).

Hope, my annotations did help, too.

Yours
Peter

Have you had a bad experence with a business, or person?

Check out http://msh.ptd.net/soapbox/soapbox.htm

Have you ever been so upset with a business that you've felt like talking out a full page newspaper advertisement to tell the world how you've been "wronged" by a business?

Here's your chance to leave the world how poorly you've been treated by a business http://msh.ptd.net/soapbox/soapbox.htm

1090. $$$$$$$ LOAN BUSINESS, EASY MONTHLY INCOME, NO BRAINER $

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-14 00:00:00 UTC
From: a11@a.a
Message-ID: <33c97bdb.0@news.unibe.ch>
Source record: 193685

I have participated in the standard "Please put me on your mailing list" letter and found it to be worth
my time (I get 1 or 2 handfulls or letters every day) but I also found that it's results were nowhere
near what I expected due mainly to people not sending in the money but rather spreading the letter
without paying for it. I participated in that mainly as an experiment and found that there are a
tremendous amount of people willing to do it. I thought about how to, first, eliminate the "non-pay"
problem and, second, to create a monthly income. I came upon the solution and decided to start a new
program. I decided that there were 3 things that this new program needed in order to work for everyone
and they were: 1.) It needed to be very simple and easy for anyone to do, and, 2.) It needed to be
inexpensive enough for even the poorest of people, and, 3.) It needs to be DUPLICATABLE. I think you
will find this program to meet those requirements. I have put lots of thought into it and I ask that you
PLEASE do NOT modify it. This WILL WORK if you follow it. This system is based on the unconditional
"loaning" of money to people. Simply say, "I am loaning you this $2 as an act of goodwill to help you in
your financial need, you may pay me back if and when you can." You should find 5 or more people who will
send $2 to the 5 needy people on this list AND MAINTAIN 5 or more people who will do the same. You
should put your name on postition number 5 and move each of the other names up one position. The name
originally on position number 1 gets removed. You should be able to contact each of your 5 or more
people to see if they are going to be active this month. If not then you need to find one or more people
to be active in order to maintain at least 5. I am not speaking about the 5 people on the list but
rather the 5 new people you have found. I would highly suggest having more than 5 in any given month.
Now I know that this would be extremely easy to do since I can think of at least 20 people myself who
will do this consistently. The key is to maintain at LEAST 5 active people. If you don't then you can't
expect for the rest of the people to do it either and you can't expect for this system to work. This

system is a no-brainer, and if someone can't afford the $10 + stamps for this then they truly ARE in
need! It is OK to use the internet to find people but I think it would be easier to find them through
people that you know. This way it will be easier for you to contact them every month to ask about their
being active, unless someone is willing to give you their e-mail address. Here are some numbers:

Monthly income model per level and total for maintaining 4 active members @ $2 each:

Level 1: $2 x 4 people = $8, Total now $8
Level 2: $2 x 16 people = $32, Total now $8 + $32 = $40
Level 3: $2 x 64 people = $128, Total now $8 + $32 + $128 = $168
Level 4: $2 x 256 people = $512, Total now $8 + $32 + $128 + $512 = $680
Level 5: $2 x 1024 people = $2048, Total now $8 + $32 + $128 + $512 + $2048 = *** $2728 ***

Yearly income: $2728 x 12 months = $32,736

Monthly income model per level and total for maintaining 5 active members @ $2 each:

Level 1: $2 x 5 people = $10, Total now $10
Level 2: $2 x 25 people = $50, Total now $10 + $50 = $60
Level 3: $2 x 125 people = $250, Total now $10 + $50 + $250 = $310
Level 4: $2 x 500 people = $1000, Total now $10 + $50 + $250 + $1000 = $1310
Level 5: $2 x 2500 people = $5000, Total now $10 + $50 + $250 + $1000 + $5000 = *** $6310 ***

Yearly income: $6310 x 12 months = $75,720

Monthly income model per level and total for maintaining 6 active members @ $2 each:

Level 1: $2 x 6 people = $12, Total now $12
Level 2: $2 x 36 people = $72, Total now $12 + $72 = $84
Level 3: $2 x 216 people = $432, Total now $12 + $72 + $432 = $516
Level 4: $2 x 1296 people = $2592, Total now $12 + $72 + $432 + $2592 = $3108
Level 5: $2 x 7776 people = $15552, Total now $12 + $72 + $432 + $2592 + $15552 = *** $18660 ***

Yearly income: $18660 x 12 months = $223,920

Monthly income model per level and total for maintaining 7 active members @ $2 each:

Level 1: $2 x 7 people = $14, Total now $14
Level 2: $2 x 49 people = $98, Total now $14 + $98 = $112
Level 3: $2 x 343 people = $686, Total now $14 + $98 + $686 = $798
Level 4: $2 x 2401 people = $4802, Total now $14 + $98 + $686 + $4802 = $5600
Level 5: $2 x 16807 people = $33614, Total now $14 + $98 + $686 + $4802 + $33614 = ***

$39214 ***

Yearly income: $39214 x 12 months = $470,568

Keep in mind that it does not matter what day of the month that someone chooses to be active. It DOES
matter that they are active on that day EVERY month. The key to this is DUPLICATION! You must treat this
as a business. If you treat it like a hobby that is how it will treat you. You could even organize small
meetings with your people and their prospects and work with your leaders.
Think of how easy this would be for you, how reasonable this is, and of how good the chances are of it
working for you. You may need to hire someone to open all the envelopes.

NOTE: I decided on $2 instead of $1 because it is more feasible and it won't matter much for someone to
send $2 as opposed to $1. Also I was against $5 as that becomes too expensive to duplicate.

Mail $2 every month with a piece of paper saying "I am loaning you this $2 as an act of goodwill to help
you in your financial need, you may pay me back if and when you can" to the following needy people:

Hello,

I am looking for a AM/FM receiver that is controlled via a standard
RS232 interface.

I would like to receive AM/FM comercial broadcasts by programming the
receiver to 'listen' to diffrent things at diffrent times, like a VCR.

I need a RS232 controlled radio, not some internal PC card. Only
interested in the comercial AM/FM bands...

Thank you in advance!
Andrei

> It does not say,
>"...to any radio communication." It says, "...to any radio
>communication OR signal." My emphasis on OR.

I agree with others who have observed that it all comes down to the *regulatory* definition of "radio communication" and "signal". For example, the popular 7040 kHz frequency is on top of the 447th harmonic of the TV horizontal scan rate, and every TV gives out a "signal" on that frequency. Is everybody who's using 7040 therefore breaking the law when they transmit over that "signal"?

Level 3: $2 x 64 people = $128, Total now $8 + $32 + $128 = $168
Level 4: $2 x 256 people = $512, Total now $8 + $32 + $128 + $512 = $680
Level 5: $2 x 1024 people = $2048, Total now $8 + $32 + $128 + $512 + $2048 = *** $2728 ***

Yearly income: $2728 x 12 months = $32,736

Monthly income model per level and total for maintaining 5 active members @ $2 each:

Level 1: $2 x 5 people = $10, Total now $10
Level 2: $2 x 25 people = $50, Total now $10 + $50 = $60
Level 3: $2 x 125 people = $250, Total now $10 + $50 + $250 = $310
Level 4: $2 x 500 people = $1000, Total now $10 + $50 + $250 + $1000 = $1310
Level 5: $2 x 2500 people = $5000, Total now $10 + $50 + $250 + $1000 + $5000 = *** $6310 ***

Yearly income: $6310 x 12 months = $75,720

Monthly income model per level and total for maintaining 6 active members @ $2 each:

Level 1: $2 x 6 people = $12, Total now $12
Level 2: $2 x 36 people = $72, Total now $12 + $72 = $84
Level 3: $2 x 216 people = $432, Total now $12 + $72 + $432 = $516
Level 4: $2 x 1296 people = $2592, Total now $12 + $72 + $432 + $2592 = $3108
Level 5: $2 x 7776 people = $15552, Total now $12 + $72 + $432 + $2592 + $15552 = *** $18660 ***

Yearly income: $18660 x 12 months = $223,920

Monthly income model per level and total for maintaining 7 active members @ $2 each:

Level 1: $2 x 7 people = $14, Total now $14
Level 2: $2 x 49 people = $98, Total now $14 + $98 = $112
Level 3: $2 x 343 people = $686, Total now $14 + $98 + $686 = $798
Level 4: $2 x 2401 people = $4802, Total now $14 + $98 + $686 + $4802 = $5600
Level 5: $2 x 16807 people = $33614, Total now $14 + $98 + $686 + $4802 + $33614 = ***

$39214 ***

Yearly income: $39214 x 12 months = $470,568

Keep in mind that it does not matter what day of the month that someone chooses to be active. It DOES
matter that they are active on that day EVERY month. The key to this is DUPLICATION! You must treat this
as a business. If you treat it like a hobby that is how it will treat you. You could even organize small
meetings with your people and their prospects and work with your leaders.
Think of how easy this would be for you, how reasonable this is, and of how good the chances are of it
working for you. You may need to hire someone to open all the envelopes.

NOTE: I decided on $2 instead of $1 because it is more feasible and it won't matter much for someone to
send $2 as opposed to $1. Also I was against $5 as that becomes too expensive to duplicate.

Mail $2 every month with a piece of paper saying "I am loaning you this $2 as an act of goodwill to help
you in your financial need, you may pay me back if and when you can" to the following needy people:

Look at www.icomamerica.com under receivers for either the PCR-1000 or
the R-8500. Both are /can be RS-232 controlled.

1098. NOTICE OF RECALL: SECTION MANAGER OF NYC/LI SECTION

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-15 00:00:00 UTC
From: jtomason@usa.net
Message-ID: <5qev4e$j8s$1@news01.li.net>
Source record: 193493

Those noted at the end of this letter have all signed
the original copy. There is also supporting documentation
that accompanies the printed version.

AN OPEN LETTER TO MEMBERS OF THE NYC/LI SECTION OF THE ARRL:

As you may or may not be aware, we have initiated a motion to recall (remove) the Section Manager, Len Buonaiuto, KE2LE. Mr. Buonaiuto has demonstrated a large misunderstanding of his position, who his appointed volunteers are, and the limits of his authority. He has also mismanaged his staff and removed established volunteers without notice or recourse. We find that KE2LE is acting in a reckless manner and that his actions threaten many of the successful ARRL programs in this section and their relationship with local served agencies.

The ARRL by-laws require this matter to be brought up for a vote by all of the Members of the Section. We strongly urge you to vote to recall the Section Manager, Len Buonaiuto, KE2LE, for the following reasons:

1. KE2LE solicited volunteers for District Emergency Coordinator positions for boroughs of New York City via APRS packet during the end of June, apparently ignorant of the fact that each borough already has an Emergency Coordinator, and that there is an existing District Emergency Coordinator for the entire city (Marc Kaufman, WB2DWC) who has been in the position for 5 years. When WB2DWC contacted Mr. Buonaiuto, he was told that he was not on the list of appointees. WB2DWC then attempted to verify this with Mario Maltese, WF2T, the Section Emergency Coordinator, who informed him that he was, indeed, on the list. These facts may be verified with the parties concerned. Conclusion: Mr. Buonaiuto either had no knowledge of who his appointees were or was not truthful.

2. Mr. Buonaiuto removed Andrew Feldman, WB2FXN, from his position as DEC of Suffolk County without any form of prior notification or due process. While the Section Manager retains the right to do so, it is customary and fair for review and due process to be followed in such cases.

3. In a letter to officials of Suffolk County Fire, Rescue, and Emergency Services, Mr. Buonaiuto stressed that WB2FXN was to return his County keys and that they should be issued to the new DEC. Since the ARRL does not make decisions for Government Officials and WB2FXN as the RACES Radio officer is appointed by the County Government, KE2LE's "request" was denied on it's face. Conclusion: Mr. Buonaiuto does not understand the limits of his position or the ARRL's authority.

4. Shortly after learning that his action would not remove WB2FXN as the RACES Radio Officer, Mr. Buonaiuto, without invitation or appointment, appeared at

the office of the Commissioner of Fire, Rescue, and Emergency Services. His attempts to speak to the Commissioner or his deputy were rebuffed and he was asked to remove himself from the premises. Conclusion: Mr. Buonaiuto acts unprofessionally in the name of the ARRL and damages long-standing efforts to improve the image of ARES and the League with County officials.

5. In removing WB2FXN, Mr. Buonaiuto did not seek the advice or counsel of his Section Emergency Coordinator, Mario Maltese, WF2T. In fact, his actions were in direct contradiction to WF2Ts earlier recommendation NOT to remove WB2FXN that was given based on interviews with those who had complained to him. In protest, WF2T resigned as Section Emergency Coordinator, although he was later convinced by others to remain. In protest of KE2LE's actions, Jim Everett, WB2ZIE, has resigned as Local Government Liaison for Easthampton and Southampton Towns. Sam Streger, WA2UXY, has resigned as Emergency Coordinator of Huntington Town. Conclusion: Mr. Buonaiuto mismanages his staff and ignores their counsel in their areas of responsibility and expertise, and causes capable and respected people to resign in anger.

6. Mr. Buonaiuto chose the Suffolk County ARES/RACES net as his vehicle to announce WB2FXN's removal as DEC. He did not inform the Town Emergency Coordinators of the removal or of his intentions beforehand or even seek their counsel on the subject. This was a completely unprofessional and thoughtless action on Mr. Buonaiuto's part.

7. In correspondence to Joe Tomasone, AB2M, dated June 13, 1997, Mr. Buonaiuto said of AB2M's list of references in his application for the APRS Assistant Section Manager position, "All your reccomenditions are fine except one, no names mentioned.This one may get you passed by in some cases." WB2FXN was among the list of references, and this statement was made 10 days before WB2FXN was removed from his position. Conclusion: KE2LE apparently follows "guilt-by-association" in his decision-making processes instead of deciding things based on their merits.

8. Frustration over KE2LE's actions has angered some ARRL members in New York City so much that they are contemplating petitioning the ARRL to be removed from the Section and to form their own Section. This was confirmed in a telephone call with Division Director Frank Fallon. Conclusion: KE2LE is fracturing not only ARRL programs, but the Section as well.

9. Mr. Buonaiuto has refused certified letters sent to him regarding these matters. He has also declined to return related phone calls. Conclusion: Mr. Buonaiuto is unwilling to listen to the members of the Section on matters important to them.

Mr. Buonaiuto's actions have caused severe damage to the ARES/RACES programs in this Section, have called into question the image and professionalism of the League, and have caused respected people in the section to resign their appointed positions. Please consider these matters carefully -- the future of all ARRL programs such as ARES, NTS, the Official Observer program, and the Local Government Liaison program literally rides on your vote. Is Mr. Buonaiuto's handling of these matters what you expect from a leader and from

your local ARRL representative? If not, then please vote affirmatively for the recall when you receive your ballot.

Marc Kaufman, WB2DWC, ARES District Emergency Coordinator,
RACES Radio Officer, New York City

Mario Maltese, WF2T, Section Emergency Coordinator, NYC/LI

George Gluck, WA2WKV, ARES District Emergency Coordinator, Nassau County

Jim Everett, WB2ZIE, ARES Emergency Coordinator, Town of Southampton

Joseph Tomasone, AB2M, Deputy RACES Radio Officer, Suffolk County

Sam Streger, WA2UXY, Ex-ARES Emergency Coordinator, RACES Radio Officer,
Town of Huntington

It would seem that the one crying is you Mr. O'Brien but whatever. I did think of another couple of reasons why I can't be more like you; my parents were married and not otherwise related.

Fetal alcohol syndrom combined with a diminished gene pool can be a terrible thing. I suppose you can't really help how you are but that doesn't make you any more palatable.

I am sorry to hear of the passing of your Bellsouth account, meeting you has been an interesting experience. This has been my first encounter with a person whose IQ and sock size were exactly the same. Sorry about the polysylabic verbage but I just can't seem to bring myself down to the level of your vocabulary.

Perhaps you can find someone who actually has a GED to explain the above to you.

Watch out for those DUI checkpoints,

Jerry

PS I'm married with several children so that 'fag' dog won't hunt.

Message-ID: <5qf1o2$p5p@alexander.INS.CWRU.Edu>
Source record: 193497
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

Debate on CW aside, I was wondering if some OM or YL out there happens to be familar with a certain type of QRM I heave heard recently on BBC. It's only on their 49 metre band signal at 5.975 MHz signal, usually around 04:00 to 05:30 Zulu.

The QRM sounds like a "Morning Glory" or similar bird that is common to the midwest US (people near my Ohio QTH should hear it around sunrise every spring through summer). I know the sound is electronic for three reasons

(1) I hear it only from an indoor music source (like a press confrence or from the studio)

(2) It is WAY too regular and consistent to be from a real bird.

(3) I remember reading many years ago about a form of QRM that sounded like a bird. I think people where using them on CB's in the 80's a lot.

If anyone knows, or can jog my memory, I would be thankful.

73's

I need a DTMF (i.e. telephone) keypad. The 12-key keypad needs to be self-contained (all electronics within the borders of the keys, not spread out on a circuit board larger than the keypad itself). It must be able to be powered from the telco line power; no room for batteries.

Any suggestions? Do you know of any keypads from some telephone/ radio equipment you've seen that might fit my needs? I'm upgrading an old dial-type telecom test set to a tone-type, and the keypad needs to fit within the space that the dial takes up.

Thanks for any help you can offer. Direct e-mail replies are doubly appreciated.

Enjoy,
Dave

Ed,

I have an even simpler idea. If this gentlemam is so upset with the ARRL that he feels it has to be subverted, why does he not simply join K1MAN's group up in Maine. What is K1MAN calling it tjis week? The American Amateur Radio Association or the International Amateur Radio Network or some such? They would be perfect for one another for reasons that are rather obvious. <grin>

Well put Mike. Most of these jerks love to abuse policies repeatedly.
Glenda posts from Sexzilla,he does'nt have the decency to even stop jerking
off between posts. Herman and cracked are both homosexual,a search of deja
news proves that. These people don't have lives: they delight in causing
people discomfort on what should be a people's forum. they like being the
Big bully,but most of them in person are 5'7" and weigh a buck o five. This
is the one pathetic little existance where they feel they are in control.
But when someone like me comes along and tears their feeble little world
apart what do they do? They regress! They cry to anyone that will listen.
Unfair! Unfair! They bitch and moan about the same practices that they have

been doing for ten years or more. You would not believe the morons that my little adventure flushed out. Extra class hams actively participating in pedophelia,Advanced class hams selling drugs,software piracy,mail bombing,terroristic threats,wire fraud you name it. Bellsouth will not tolerate these activities on their data lines. What a lot of these idiots don't realize is that every internet feed that travels on United States lines is subject to state and federal laws. In a way I feel sorry for these little geeks. They have nothing to fall back on,the amateur radio they so often complain about is almost dead. And they have taken the same dysfunctional seed and lack of morals and brought it here to the Internet. So while I have the key down,I want to thank the hams that helped me behind the scenes on some of the worst ones,you know who you are. To all the ones that have wilfully committed felonies here,good riddance. I look forward to assisting the US Attorney in your prosecution. As for the box,it's still in use.Go ahead and hack into it,there's enough supoenas and search warrants for everyone.

Hi Thanks for reading,
I am looking for mods for my kenwood/trio TR751e,
what i would like to do is to get it to rx below 144.00
i have got the display to read 140 to 150 but it only rx,s from 144 to 150
dont know why?? the display shows a small minus sign when trying
to tune below 144 mhz !!
any help would be of great use ....73s DE dave Gw7pny

Greg Kopp wrote:

> What is it worth? (Did I get ripped off?)

They were about $100 new at one time.

I've had one up for 15 years in a Rohn 25 tower turning a pair of KLM 22C's, a pair of 14C's, and a TV antenna. I wore out the control box by tracking low orbiting WX sats all the time. I found a used replacement. The rotor itself has been flawless but this is not true for everyone. I took a couple of them apart that wouldn't turn and found the cork pad that acts as the brake to be stuck to the breaking surface. It's supposed to disenguage when the motor starts. Once fixed they all worked fine again.

If the wind blows too hard the rotor turns from the outside thus avoiding breaking the gears. When the wind stops, just move the antenna back.

It's been a good rotor for $100.

"A long story hi hi"? Want to clue us in on this long story? Want to tell us who else is out there doing anything for the amateur community? I doubt very much that you are even a member of the ARRL. I doubt you have a clue whats happening outside your local 2mtr. repeater range.

Of course it is. However, cranking up a web browser to search and retrieve strictly textual information incurs a lot of system overhead. WHOIS is designed specifically for this type of application -- it's lightweight, fast, and doesn't require a GUI.

This Sunday is SweatFest 97 in Brunswick, MD
Date: Sunday July 20th
Hamfest Time - 7AM - 3 PM
Tickets - $5
Tailgate -$5
Indoor - $20

In addition to the tailgate and indoor vendors, we will have the following activities:

ARRL VEC Test Session "veteam@aol.com"
ATV Display
Skywarn/ARES discussion

There are also activities for the whole family. The hamfest is located in historic Brunswick next to the C&O canal. The Brunswick RailRoad Museum will be open as well as the many craft shops in the village of Brunswick. A craft show will also be in operation in town with a shuttle bus available from the railroad museum.

Hi all,

I have now added a QRP linear amplifier to the collection. It was designed as the final stage for my Phasing-type SSB exciter, but with over 30dB of gain it will make a lovely CW / SSB transmitter when used with a simple oscillator/driver. I have used it for 10w with my Grid Dip Oscillator (GDO) as a driver. The hand-drawn PCB foil pattern is also included as a GIF file (drawn before I had a PC computer).

I have also added a dead easy 15v PSU. No IC's or any complicated stuff. Can be extended to form a regulated 0-15v PSU with current limiting (only two active devices).

I am adding more circuits to my homepage constantly, as long as I have time available to do it. Have fun with QRP (and QRO). Harry, SM0VPO (G4VVJ), Upplands V�sby, Sweden.

Hi:

I am looking for info on a Phelps-Dodge catalog # 315 commercial grade 80 meter vertical antenna, I have come across one but it has had the top section cut off and a piece is missing, I think it is only a piece of rod that is gone but need to know the dimensions,it is built like a battleship and would make a great ham band antenna. It was designed to resonate at 35.885 according to the tag. I have searched the internet for info on Phelps Dodge but only come up with the name associated with International mining and finance.
Any info would be appreciated.

thanks

paul N7IJB pae@premier1.net

Is'nt it funny how they all run and have to cry to somebody? Always looking
for someone else to get them out of a mess that they created. I bet he
still sucks his little thumb.

No James I do not wish I could be you for any number of reasons.
> The
> >> >> two that first come to mind are, having to get rid of 100 IQ
> points
> >> and
> >> >> 100K in annual income.

Like a 100K is a big income!? And I'm sure this jerk is a mensa! Of
course!

I am terribly sorry little Jimmie, I didn't mean to frighten you.

This guy probaly has pets he's scared of. And it's Jimmy,dumbass. He must have missed that on the mensa test.

What is the difference between USPS and USPSA? BTW you should really
> >> put a space between words.

I'd say the letter A? BTW,you can tell he's a pocket-protector wearing geek.

> It would seem that the one crying is you Mr. O'Brien but whatever. I
> did think of another couple of reasons why I can't be more like you; my
> parents were married and not otherwise related.

You can tell his deceased or estranged parents are always on his mind. He is used to running his problems to them,even in his adult life. The married comment is curious too. Maybe he was born out of wedlock?

Fetal alcohol syndrom combined with a diminished gene pool can be a
> terrible thing. I suppose you can't really help how you are but that
> doesn't make you any more palatable.

More parentage! You can tell that his parents are the dominant thing in his mind. He probaly treated them like crap in old age and now they're deceased. Or vice versa.Maybe hostility for giving him the name "Gerald Schitt".

I am sorry to hear of the passing of your Bellsouth account, meeting
> you has been an interesting experience. This has been my first
> encounter with a person whose IQ and sock size were exactly the same.
> Sorry about the polysylabic verbage but I just can't seem to bring
> myself down to the level of your vocabulary.

I am still on Bellsouth. With all the problems your whining along with your little buddys were causing we decided to conceal my address. It will take a while for the prosecutor here to file all the charges anyway. And you have'nt met me. A closeted,sheltered little mommy's boy like yourself never meets men of my physical size and stature. It's only in front of your crt you become the "man" your mother never saw in real life. As far as sock size,my IQ is higher than 13,I can assure you.
Good thing you keep a dictionary handy,I'm sure you need it. As far as verbage goes,I'm not addressing the senate,I am merely pointing out to this newsgroup what an asshole you are. They are mainstream,work for a living,and are real. They don't get on the computer or the Internet to get into a fantasy of the man they never were like yourself. They get on here for good old-fashioned entertainment,much like myself. And with pseudo-intellectual-highbrow types like yourself,the down-home verbage works just fine,don't ya think? Ya Reckon'?

Perhaps you can find someone who actually has a GED to explain the
> above to you.
>

That's easy,thanks to your tax dollars on that supposedly massive income, you paid for my Ba AND my MA. Thanks,Schitt.

Watch out for those DUI checkpoints,
>
> Jerry
>
> PS I'm married with several children so that 'fag' dog won't hunt.

I don't drink and drive. And I love the "several" children. No one would ever say "several",maybe I "have" children,or I "have" a family. My basic psychological analysis of you Schitt is that you are single, a heavy drinker with a co-dependant floosy slut for a girlfriend. Your vocabulary and IQ is way too low for you to be a homo. Both your parents are dead,your a lost little puppy without them,and you and the floosy probaly scrape by with about 20,000 apiece punching the clock in a widget factory. Now remember,this is Reality,not your little Internet fantasy. Sorry to bring you down so hard. Please return your trays to the upright position.

I have several lots of (54)12AX7, (88)12AT7, and (54)12AU7 up for bids at eBay. The tubes are all used and domestic (US). There are an assortment of manufacturers, all US. This is a great opportunity to pick up some cheap preamp tubes. To bid, just follow the links below:

Thanks for reading,
Christian

From the HD-73 Owner's Manual:

The HD-73-1 has the heaviest pitch gear teeth (steel hardened) of any rotator in its size and price range.

The HD-73-1 control unit features TWO-SPEED rotation with one five-position switch. This presents a one revolution per minute speed for rotating over an extended are and a slower speed for adjustment of, say, several degrees one way or the other for fine adjustments for the best signal on receiving and transmitting.

The rotator not only has a readily accessible externally located fuse for total unit protection, it also has an internally mounted automatic reset thermal protector for the motor and transformer against shorts or possible connection error or prolonged operation.

A large, back-illuminated 3 1/2" Jewell D'Arsonval, Taut Band, linear, full scale 100° swing, meter is calibrated in bold S-W-N-E-S as well as a degree-graduated scale.

The meter direction indicating voltage supply is solid state voltage regulated for meter indication accuracy regardless of wide line voltage or load variation; the regulating range is 105 to 129 volts.

The HD-73-1 rotor was designed to operate antennas with a maximum of 10.7 square feet of wind load area when properly installed.

Diameter of rotator unit -- 8".
Mast mounting size range -- 1-3/8" O.D. to 2-1/2" O.D.
Mounting option -- in tower (preferred), or on tower or mast.
Cable -- 6 conductor.
Voltage input -- 117 volts A.C., 60 hertz, + 12 volts.
Rotator weight (bare) -- 6-3/4 lbs.
Rotator with 1 pair antenna brackets -- 9-1/8 lbs.
Rotator with 2 pair brackets -- 11-1/2 lbs.
Shipping weight -- 17 lbs.
Rotator speed -- Dual -- 1 R.P.M. and a pinpoint slower speed.
Motor -- capacitor split phase, reversible. Motor voltage -- 20 volts A.C. No voltage on motor or leads exceeds U.L. safety limits.
Transformer, power -- Double protected -- fuse and thermal protectors.
Meter -- D.C. D'Arsonval, taut band. Meter scale -- S.W.N.E.S. and degree scale.

WIND LOAD INFORMATION

Severe installation and duty requirements are placed upon antenna rotors and supports by communication antenna arrays. The factors involved in such installations have been under investigation for many years to determine the effect of such requirements on antenna rotators, and how to design and manufacture rotators that will support and operate antennas under the very adverse conditions that exist in some localities. These locations are not only those of high wind velocity but also those of additional ice loading and severe conditions that exist during periods of blizzard and peak gusts of wind that occur in many areas.

The Unites States Weather Bureau furnished fastest mile per hour velocity figures from many recording stations around the United States. Measurements have been made of the relationship of gusts for fastest miles per hour data by the Bureau showing that gusts exceed fastest wind velocity data generally by 30%.

As a result of the above, the Electronic Industry Association (EIA) has recommended a wind loading standard of 30#/sq. ft. of projected surface for the purpose of design by United States manufacturers. This corresponds to a wind velocity of 110 mph. The use of this standard in design procedures will consistently yield products better able to withstand successfully most prevailing wind conditions in the U.S.A.

This brings us to the subject of Bending Moment, also called Side Thrust Overturning. Wind loading or wind pressure acting on an antenna, rotator and tower are essentially the

same as those acting on buildings, water towers
and other structures. Wind loading is by far the most critical and
severe item to be considered for antennas, rotators
and tower life. A typical 3 element vertical C.B. antenna creates a
bending moment of 1700 lb. ft. and necessitates
in-tower mounting. Other C.B. antennas are vertically polarized and
can exceed these values.

Could anybody point me to list of all callsign prefixes? I heard today
morning on 21MHz station with prefix PI4, but in my list this prefix
isn't.

Thank you,

Stan@objecthouse.es

Perhaps you don't. Autopatching is third party operation, and requires
that a control operator be at a control point. That can be a remote
control point of course. But an ordinary repeater, even a cross band
repeater, can operate under automatic control, so a control operator
need not be present. A 2m to 10m cross band repeater doesn't need
a control operator present, and a Tech operating on 2m isn't doing
anything outside his privileges by using one.

Given that particulars such as date, time, place, agencies involved,
call-signs and the like are conspicuously ABSENT..., then yes. It does
sound farfetched, but let's play along....

> One evening my friend was scanning the 902-928 MHz Ham band with a popular
> STANDARD brand amateur radio, looking activity while doing some work on
> his computer. The radio stopped on a station which was later identified to
> be a cellular phone call.

Then he was NOT scanning a HAM band, was he. We don't use cell phone
frequencies, they don't use ours. If he did, in fact, receive a cell
phone transmission not intended for him, he broke the law. Period.

Well, you would know, Spew. You have your finger on the pulse of all
the illegal activities in radio.... pinning coax, destruction of private
property, illegal operation on unauthorized frequencies, use of non-
type-accepted equipment and illegal power limits.

Yup, Spew, you're just a real asset to the radio community...

I've got some questions for you. Why is it the University of Hawaii
knows nothing of you. Could it be you have an illegal shell account
? And as far as what I have to offer I've researched your posts. All you
do is flame on a consistant basis. If your so straight why do you
continually dodge my question about why you are'nt married? What does me
soldering have to do with you being a flamer that cavorts with proven
homosexuals.

1141. Hamming in Minneapolis-St. Paul. Who? Where? When? Which frequencies?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-15 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <19970715024701.WAA12284@ladder01.news.aol.com>
Source record: 193585

Hi all,

I'm sending this from the Motel 6 in Clarksville, TN. (Hey, the room's only $24.99, free local calls, and a local AOL number :-)

On my way to Minnesota for the Conclave (annual radio convention) in St.Paul July 17-20. Since I haven't been there since getting my ham ticket, I'm pretty clueless as to what's hot and active, frequency-wise. I have both 2m and 10m capability in the mobile, plus a 2m HT. Where do y'all hang out?

-Drew in Sunny Central Florida-
KF4DDM since 9/95 on 2m & 10m
KADF-6895 since 9/76 on 11m
Active scanner and Internet freak as well
(no license required)

Too bad faggot. I guess you'll have to find another box to flame (besides
your boyfriend's)! Please don't kick the dog TOO hard!!! Just like all the
other geeks,this fruit lives to flame my mailbox. Well,what's your pathetic
excuse for a human life going to do now? Dumbass

>information...

Best place to begin would be the (moderated) NG rec.radio.broadcasting, devoted to domestic AM and FM broadcasting. Equipment manfacturers, DJs, station managers/owners, station engineers, all reside there. Even our own anti-ham ham, Drew, hangs out on there...
Jeff KH2PZ / KH6

| |
| Mail generated on your system for a destination within the |
| 'z2.fidonet.org'-domain, was detected at this site and classified as |
| unwanted. |
| |
| If you bona-fide responded to a listserver your message unfortunately |
| also falls under that category as such type of mail is not accepted |
| nor distributed from here either. |
| |
| 'fidonet.org' is a hobby domain where individual |
| people run individual mailers using PSTN-technology out of their own |
| pocket and every such message adds to the cost. |
| |
| Therfore the original message is bounced back to you at the gate. |
| |
| Fidonet-participants are victimised by thousands of bogus listserver- |
| subscriptions and you may very well be a side-victim of this. |
| |
| In that case your cooperation would be greatly valued by crossposting |
| this mail to the postmaster/owner of the mailing-list/list-server with |
| a request to kick any subscription coming the 'z2.fidonet.org'-domain. |
| We are bothered here by it as much as you are now. |
| |
| If you are residing in the USA then the following notice |
| may apply to you. Please read it attentively! |
| |
| +-------------------------------------------------------------+ |
| | By US Code Title 47, Sec. 227(a)(2)(B), a computer/modem | |
| | /printer meets the definition of a telephone fax/machine. | |
| | By Sec. 227(b)(1)(C), it is unlawful to send any unsolicited | |
| | materials to such equipment. | |
| | | |
| | By Sec.227(b)(3)(C), a violation of the aforementioned | |
| | section is punishable by action to recover actual monetary | |
| | loss, or $500, whichever is greater, for each violation. | |
| | | |
| | I will report any violation 'abuse@postoffice.us'. | |
| +-------------------------------------------------------------+ |
| |
| Kind regards, |
| |
| Ward Dossche |
| Fidonet Coordinator for Europe |

Subject: Need opinions on Dual Band base station verticals

My 2 cents.. Stay away from the CushCRAP! Both the Diamond and the Comet
are good. I use a Diamond X-500 and X-200 for packet, both work very well!
I have the X-500 at 60 feet for packet on 2m and 70cm. and the X-200 at 30
feet for packet on 70cm and voice on 2m.
The X-500 has been up for 4 years with Belden 9913 cable, SWR is the same
as the day it went up. X-200 3 years, same thing. Both are on the air 24/7
in BBS operation.
The Comet looks like a copy of the Diamond so I would expect the same from
one of them.

From: hansbrakob@juno.COM (Hans Brakob)
Subject: PNW DX Convention

1997 PNW@

Date: 14 Jul 1997 11:05:47 -0400
From: "Lindquist, Rick, N1RL" <elindquist@arrl.org>
Subject: Solar Update

The solar report from Tad Cook, K7VVV, arrived too late to make the deadline for The ARRL Letter, Vol 16, No 28. Here's Tad's report:

SUN IS FLAT!

Solar seer Tad Cook, K7VVV, in Seattle, Washington, reports: Conditions are still flat. The average solar flux, sunspot number and planetary A index hardly varied from last week to this week. Because short-term forecasts are based upon the previous solar rotation, no activity is predicted for the next month, except for a possible slightly unsettled period around July 23 or 24.

W7ZT in Arizona reports he didn*t even notice any seasonal sporadic E skip on the higher frequencies over the Field Day weekend. W4VOS offered some comparisons of previous solar cycles. He noted that it is mostly true that each odd-numbered solar cycle was greater than the previous cycle. We are now awaiting activity from cycle 23, so this is a cause for some hope. But with a chart from a 12-year old issue of a DX newsletter which showed cycle data provided by KH6BZF, W4VOS commented that cycle 9 around 1850 was smaller than cycle 8, and cycle 5 around 1805 was much smaller than cycle 4. Will cycle 23 be the third cycle in history to break this rule? Let us hope not.

Sunspot numbers for July 3 through 9 were 12, 12, 11, 11, 26, 25 and 31 with a mean of 18.3. The 10.7-cm flux was 69, 69.7, 69.7, 71.8, 71.7, 71.2 and 70.2, with a mean of 70.5, and estimated planetary A indices were 7, 7, 4, 4, 14, 5, and 11, with a mean of 7.4.

Readers who wish to comment can email the author at tad@ssc.com.

nomination form, included in your newsletter. Remember, WICEN is
composed of "Amateurs who care".

A new event on the WICEN calendar is the VRA Annual General Meeting,
at Randwick, over the weekend of 27-28th September.

Saturday 12th July sees the running of the Colo Classic Endurance Ride, the communications for which is being organised by Blue Mountains WICEN. Three more operators are still required to cover all checkpoints, and a meal will be provided from the BBQ when operators complete their checkpoint. It is a 24-hour event starting at midnight on Friday, and checkpoints will be open for a maximum of 8 hours. If you would like to help out, please contact Neil Fallshaw, at work on (02) 9342-1589, at home on (047) 51-6449, or e-mail as "neil_fallshaw@optus.com.au".

The Central Coast AGM will be held on 25th July, at the Central Coast Rescue Squad Base, Rose St, Wyong, starting at 8pm.

The Hunter region will be providing safety communications for the "CanTeen Annual Troy Newman Cycle Trek" from Sydney to Newcastle on 27th July; the event co-ordinator is Pauline VK2GTB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

SPACE NEWS

MIR BACK ON AIR

Ham radio aboard the Mir has been getting some casual use again as the three-man crew continues efforts to get life back to normal aboard the Russian space station. General ham radio operation was suspended in the immediate wake of the mishap last week that damaged one of the Mir's compartments. But this week, US ham-astronaut Mike Foale, KB5UAC, expressed ''thanks for all your good wishes'' to hams around the world. The British-born Foale is using both 2 meters and 70 cm ''sparingly,'' according to SAREX Principal Investigator Matt Bordelon, KC5BTL. Werner Staubitzer, VO1CAT, in Pouch Cove, Newfoundland, reports he had ''a lengthy QSO'' with Foale over the weekend. Foale told VO1CAT that the crew was ''feeling fine and is making repairs to the damages as best they can while waiting for the required parts to arrive.''

Ray Webber, ZS6RSW, in Pretoria, South Africa, reports that he connected to Mir on packet (using the 145.800/200 split-frequency pair) on June 28.

Foale and his Russian cosmonaut crew mates again found themselves in crisis mode Wednesday, July 2, when the spacecraft lost attitude control. In a packet message to MIREX CEO Dave Larsen, N6CO, Foale related how, after the alarm sounded, ''we go rushing from one dark module to another, trying to look out windows, and point the solar arrays. The

station dies very quickly if we don't do this.'' Foale compared the situation to ''being on a yacht at sea, with the wind changing all the time,
and having to rush around pulling sails down, or putting them up, before a storm comes.''

Foale said the attitude failure has made the crew very wary of the next Progress rocket docking, set for Monday, July 7. ''Life on Mir is characterized by long periods of monotonous, serene calm, and short interludes of extreme frenzy, I am learning,'' Foale said.

The Progress rocket will supply cables and a special plate to fit over the hatch of the damaged Spektr science module. The crew will try to make cable connections to get the station back up to full power. Another Russian crew is scheduled to fly up in August to seal the leak and put the Spektr module back on line. Meanwhile, Foale and the cosmonauts are working on their new--but faulty--oxygen generator to get it back on line.

They are using incendiary candles to supply oxygen temporarily. Although the cosmonauts have begun practicing the repair routines, they and Foale still have a lot of time on their hands, and much of that is spent
in darkness to conserve electricity. This means Foale has time for hamming, and, so far, no one's objected to his using a few watts of power for the radio. While Mir remains a space station in trouble, Foale is providing Amateur Radio with an intimate view of the danger and drama. KB5UAC plans to operate frequently, whenever NASA and Moscow are not using their main communication channels. Look for him on 145.800 MHz, operating split. Occasionally, while Mir is over the US, you also may find him on 145.985 MHz (simplex).

To track the Mir spacecraft, check out http://liftoff.msfc.nasa.gov/temp/Mir_loc.html. The page presents a graphical representation of Mir's location and updates every minute.

(thanks to Roy Neal, K6DUE, for his contribution to this report)

--ARRL Space Bulletin 22, dated July 2, 1997

DX REPORT

CYPRUS - 5B4JE is active on SSTV. Also, look for 5B4/G4RHM during July.

GHANA - 9G1AA will be active until the end of 1997. He is working at the Dormaa Hospital.

UNITED ARAB EMIRATES - A61AQ has a daily schedule from 0000 to 0100z on 14240 kHz with his QSL manager N1DG. He is also active around 0800z on 15 meters, looking for JA and VK stations.

IRELAND - EI4VUJ will be active on all bands, from July 7 to 19. He will be located in Leitrim County, one of the rarest of the Irish counties.

GUADELOUPE - FG/F2HE will be active until September 25. His activity will be mostly CW.

SOUTH KOREA - HL0N/3 will activate Anmyu-Do Island, IOTA AS-080, until July 7. Look for CW and SSB activity on 40, 20 and 15 meters.

PERU - OA4QV will be active using the special prefix OA176 in commemoration of 176 years of Peru's Independence. He will be active until July 31, with Peru's Independence Day taking place on July 28. SSB operations will be on 40, 20, 15 and 10 meters.

ALAND ISLANDS - Several stations will be active as OH0/N4GN and OH0W until July 10.

MARKET REEF - After their stint from Aland Islands, this group will be joined by three other OH-stations and travel to Market Reef. The group is expected to arrive here late July 10. Look for activity from OJ0/OH1VR, and OJ0/N4GN. OJ0/OH1VE will be used during the IARU HF Championship contest (next weekend.) Besides activity on the HF and newer bands, there may be some 6 meter action as well.

AUSTRALIA - Special Event Station VI0ANARE will be active from July 1 through October 31 to mark the 50th Anniversary of ANARE, the Australian National Antarctic Research Expedition. Activity will be on 80 to 15 meters, using CW and SSB.

--ARRL DX Bulletin 29, dated 3 July, 1997

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY

Our next meeting is on Wednesday, 16th July, when George Adams, VK2WEL, will explain how easy it is for amateurs to communicate via satellite. He will provide information on frequencies, equipment, antennas and software needed to get started. Doors open at 7:00 pm and the meeting starts at 7:30.

The next project day will be on Saturday, 2nd of August so come along from 1:30 onwards and see what we are up to. This is a good time to get advice on faulty rigs, see and operate the facilities at our shack and catch up with other members.

The Society's clubhouse is located in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club, where a number of members gather for a meal before meetings. Anyone interested in amateur radio is welcome to come along.

--Simon Buxton, VK2EII, President

SUMMERLAND HAMFEST

The Summerland Amateur Radio Club's Annual Radio Hamfest, Garage Sale, Whatever will be on SUNDAY 3rd AUGUST, Commencing at 9.00 AM at the Clubrooms, 412 Richmond Hill Road, Goonellabah.
Plenty of pre-loved goodies, electronics and computers plus commercial

stands.

Refreshments, BBQ, Competitions, Fox Hunt ??.

Admission $2. Bring the family. Eyeball your old mates.

`application fee' is highly misleading. Although the payment must be
included as part of a complete application, it is only kept if a
requested call is awarded under the program and will be refunded by
the FCC if no call is issued and upon a written request for refund.

Regards,

From: pschleck@novia.net (Paul W. Schleck K3FU)
Subject: AutoFAQ Sent to Over 5100 rec.radio.amateur.misc Posters

In September of 1996, I started discretely mailing an introductory letter to all posters to rec.radio.amateur.misc. This is accomplished via a special Perl script originally written by comp.infosystems.www.* FAQ maintainer Tom Boutell, who uses it on comp.infosystems.www.authoring.html, to send each poster such a letter once, and only once. It runs from a Unix cron job on my host every morning at 2 AM and queries my local news server via NNTP for the headers of any new articles posted to this newsgroup. About 15-25 new posters on average receive the message each day.

Here's a breakdown of recipient's reactions to the letter over the last 9 months. All feedback was politely replied to, usually with a version of the rebuttal arguments given below:

A half-dozen people strongly objected to it (spamming and junk mail seems to have rubbed sensibilities raw with regard to receiving unsolicited, possibly automatically-sent, E-mail; experiences in other newsgroups demonstrate it to be "just barely redeeming" in terms of dealing with the massive influx of new users)

Another half-dozen thought it was a bit wordy (the message needs to be "one size fits all" and some recipients might be very confused without some background explanation; the letter attempts to get to the point as quickly as possible, but pragmatically is also optimized to minimize the amount of followup correspondence I have to engage in)

Another half-dozen insisted that they never posted to rec.radio.amateur.misc (all of them without exception did post, but it was from following up in another newsgroup to a cross-post, and not realizing what was on the Newsgroups line)

About two-dozen complimented me for posting it (which I appreciate)

The overwhelming majority did not respond, indicating one of several possibilities:

- they approve of it
- they disapprove, but not enough to bother replying
- the mail was misdelivered (I got a few bounces, often from deliberately munged Reply-To: addresses to ward off "spam")
- they don't care

So, my impression is that the project is at least a qualified success, and should continue in its present form. At the very least, it seems to

* Continuation 1 of a split message *

be substantially non-controversial. Having primed the previous-poster
database with over 5100 E-mail addresses, the chances of bothering an
experienced reader with an unneeded introductory message is greatly
reduced, and will get even smaller with time. In fact, it's probably
been about 3 or 4 months since I've received any negative E-mail.

I'd be interested in hearing your opinions on this project. I'd also
like to solicit volunteers to initiate similar projects in some of the
special-topic newsgroups (perhaps starting with my previous-poster
database as a baseline, and modifying the letter to contain pointers to
the more topic-specific FAQ's and information; the .digital.misc,
.homebrew, .equipment, and .policy newsgroups seem to be good candidates
for a project of this type).

For those who are curious, here is the current version of the letter, slightly modified in response to feedback as the project progressed.

Subject: WELCOME to rec.radio.amateur.misc

Hello,

This brief E-mail message is automatically sent to every new poster (as of September 21, 1996) to rec.radio.amateur.misc (and its associated mailing list, Info-Hams). Please note that even if you don't read or subscribe to rec.radio.amateur.misc, you may have inadvertently crossposted to that newsgroup by following up to an existing article crossposted to many newsgroups, including rec.radio.amateur.misc (as the default behavior of most newsreaders is to inherit all of the target newsgroups of the previous article when following up). You should only receive this message once. My apologies if the program contacts you twice, perhaps at two different accounts. This is not a flame (criticism), only an attempt to help newcomers get the most out of the newsgroup. As this message is sent automatically, it is also not necessarily a criticism of your posted article. The information provided here represents good consensus advice that has been gathered over the years by experienced participants like myself. I hope you will consider it in that spirit.

Please look at the following resources, which will often answer your questions without the need to post at all. Every post to the newsgroup consumes the time and effort of readers all over the world, and your cooperation is essential to make the newsgroup useful for everyone. A little effort and expense on your part can save a great deal of effort and expense for others.

Thanks!

* * *

1. The Amateur Radio Frequently Asked Questions (FAQ) List, formerly maintained by Diana Carlson, KC1SP and Ian Kluft, KO6YQ, has recently been resurrected by John Seney, WD1V. The majority of the original content of the FAQ remains the same, but now it's a hypertext document with hundreds of links to radio-related sites and is a significant resource to all students of amateur radio - regardless of their license status. It may be accessed via your World-Wide Web (WWW) browser (such as Netscape, Mosaic, Lynx, or Internet Explorer) at:

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

It is also available in text form. Send an message to John's E-mail address below with the words "HAM FAQ" on the subject line.

Please direct any submissions, feedback, or administrivia regarding the FAQ to john@wd1v.mv.com.

2. The Amateur Radio Elmers Resource Directory is an excellent supplement to the FAQ as it's a directory of "Elmers" (mentors, experts, and gurus) for amateur radio who can answer questions via Internet

E-mail and via the various resources (such as special-topic FAQ Lists and WWW pages) that they maintain. It is accessible both as a WWW page:

http://www.novia.net/~pschleck/elmers/

and as flat text files:

ftp://ftp.novia.net/customers/pschleck/elmers/

Please direct any submissions, feedback, or administrivia regarding the Amateur Radio Elmers Resource Directory to elmers-request@novia.net.

3. The Guide to the Personal Radio Newsgroups, written by Jay Maynard, K5ZC, provides an excellent overview to all of the USENET newsgroups devoted to amateur and CB radio. It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro

4. A Guide to Buying and Selling on Usenet, also written by Jay Maynard, contains a number of good pointers for reading and posting articles concerning the buying and selling of radio and radio-related equipment on the USENET newsgroup rec.radio.swap (which is the only appropriate forum for such articles). It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/swap-guide

Please direct any submissions feedback, or administrivia regarding the above two resources to jmaynard@nwpros.com.

5. The national amateur radio society of the United States, the American Radio Relay League, has a presence on the Internet. You may access their comprehensive and informative home page at:

http://www.arrl.org/

or their automated file server by sending a message with the word "help" to:

info@arrl.org

(They also have information about amateur radio organizations in other countries.)

6. Read the newsgroup first to see if your question has already been answered. You may also view, and search for keywords in, older news articles (going back to March of 1995) at the DejaNews archive:

http://www.dejanews.com/

Many topics have been discussed before, often in great depth, but the articles have expired from your local news server. Services like DejaNews allow Usenet a much longer "institutional memory" that can greatly benefit both new and experienced users.

7. If you do post to the newsgroup, give as many details as possible. After you post, read the newsgroup for a week or two to see all replies

to your posting. If you wish, ask for responses by E-mail and offer to post a summary if others are interested in the answer to your question.

8. Remember, USENET newsgroups are based on the idea of mutual aid. USENET only works if we put as much into it as we get out of it. Good luck with your experiences with amateur radio and the amateur-radio-related USENET newsgroups.

73, Paul W. Schleck, K3FU

* Continuation 1 of a split message *

the League is that their paid, professional staff is way too strapped
for time doing their regular duties to take on such open-ended burdens,
paticularly when the benefits of such labor would seem to mostly consist
of non-ARRL members. In particular, when Ron Klimas, WZ1V, asked the
League to take over maintenance of his Ham WWW Links Directory, they
specifically declined. Even if they accepted, I would be concerned
about editorial autonomy. I have nothing against the League (I'm a

member) in particular, just that I realize that no organization is going to fund something that could potentially criticize or be at odds with the organization. Volunteers not beholden to any organization have proven to be the most successful maintainers of information resources on the Internet.

If you have further specific information about ARRL plans (or even willingness) to maintain such FAQ's and make them easily accessible to all via the Internet (names, please), then please share such important information with the newsgroup.

>Personally, I would vote to have it be a moderated newsgroup
>if there were volunteers to do the moderating, or at least
>have a program do searches and eliminate the FS, make money,
>sex, Burt Fisher, and the code posts from all but policy,
>and then one could just unjoin that one group.

>It is unfortunate that at this time when technology and multinational
>communications presents opportunities to formulate new policy
>and strategy, that the level of dialogue on policy is so low.

>At first I read messages, then I scanned titles, now
>notice names of groups. The signal to noise ratio needs to be
>raised significantly on all the r.r.a...groups I read.

It all comes down to the multiple, almost intractable, problems of group apathy, "Tragedy of the Commons," the need for large-scale and ongoing user education (with a very high novice to expert ratio), and the 95/5 principles (both in that 95% of the positive contributions are done by 5% of the participants, and also that 95% of the negative contributions are done by another 5% of the participants). Based on six years of participation in these forums, I don't believe that there are any "silver bullets" to solve these problems, just lots of hard, ongoing, and thankless work.

It isn't necessary to thank me for any contributions that I've made. What I would ask is that I not be non-constructively criticized, especially by those who have sat on the sidelines.

Why is it the pot stirrers like to flame and stir the pot and when they get the inevitable response then they whine and cry and say complain to the provider? Because they are gutless. These are the guys that don't put their calls in their posts,don't wear a namebadge to a hamfest afraid someone will slap them. They sit and listen to problem frequencies on hf for hours like little puppies with their nose pressed up against the glass. Then they complain to everyone about what they enjoy listening too. Little spineless geeks living vicariously through other people. Gerald Shit fits that to a "T".Complain Gerald,but you know deep down you wish you were me,you are green with envy. Complain all you want,but if you mess with the bull, you get the horns.

From: "Keith Reynolds" <hahah@aol.com>
Subject: CBers on 10 meters?

We hams should band together and stop the non-licensed operators on 10 meters. I've noticed quite a bit of CB activity around 28.085 lately and we should put a stop to it before it gets out of hand. There'
s no excuse for them using 10 meters when it's obvious they have access to all of the frequencies below that into 11 meters. Anyone else have similar feelings about this?

That's supposed to be ADF: Automatic Direction Finder. It is meant
to be used for LF beacons (below the MW broadcast band) but it can
also be used to point to broadcast stations. Most pilots don't use
these beacons to navigate while in straight and level cruise over the
continental US, so they sometimes use it to tune in MW broadcast
stations if they're bored.

* Continuation 1 of a split message *

Lumbovskyi Island (EU-161) and Novaya Zemlya Island (EU-35). They were
hoping to receive a special callsign (which did not happen) when they
activate Bolshoi Ainov Island (a new IOTA, EU-???). Instead the team will
be signing homecall/1 and the team callsigns of UE1QQQ/1 and UE1ZNF/A.
This DXpedition is dedicated to the 60th anniversary of renaming North
Russian flotilla to Northern Navy (Severnyi Flot). QSL via UA1ZJW,
P.O.Box 72, Severomorsk-1, 184600, Russia /or via RA1QQ, P.O.Box 24,
Cherepovets, 162627, Russia.

SPECIAL EVENT. Look for VI0ANARE to be active from July 1st to October
31st to celebrate the 50th anniversary of the Australian National Antarctic
Research Expedition (A.N.A.R.E.). The suggested frequencies are:
SSB - 3620, 7075, 14175 and 21175 kHz
CW - 3532, 7020, 14052 and 21052 kHz
WARC bands by request and all frequencies are "+/-" QRM. QSL direct
only to VK4AAR (Alan guarantees a fast reply, but no bureau facilities are
available for him). Bureau cards go to VK4ARB.

SPECIAL PREFIXES.....
The city of Calgary (AB, Canada) will host the World Police/Fire
Games. Industry Canada assigned a special callsign prefix "CG6" for
use by amateurs in Calgary area. This special prefix is valid now
through July 4th.

Watch for amateurs in Thunder Bay, Ontario, using the CJ3 prefix

* Message split, to be continued *

instead of their VE3 prefix, and also the CK3 prefix instead of the
VA3 prefix, during July 12-31st, in celebration of the Scouts Canada
Jamboree.

USI ALERT. Randall, KD8JN, will activate Hatteras Island July 5-12th,
as KD8JN/4 for the "United States Island Award" program. Hatteras Island
as an USI number of NC-005S (also an IOTA of NA-067, Grid Square FM-25
and is located in Dare County). Activity will be on all bands. Suggested
frequencies are: 3785, 7260, 14260, 18128, 21260, 24950 and 28460 kHz.
QSL via the bureau or direct with a SASE to: Randall Phelps,
1226 Delverne Ave SW, Canton, Ohio 44710-1306 USA

USI ANNOUNCEMENT. The United States Islands Awards program (USI) will
kick-off the summer with an operations from Northern Canada (Ops: KC7FVA,

KC7KHU, and NL7TB). VY1USI will be active before and during the Canada Day Contest from YT-002, 03, 04, and 05 and from a couple of "new ones" starting around 1700z on June 30th. The team will focus on the emerald green Yukon River in Whitehorse. VE7USI operation will commence from Atlin Lake (Northern BC) on July 2nd around 1700z from several "new ones" through July 4th. For a feeling of being there, try:
http://users.yknet.yk.ca/bbdo/cascade/about.htm
Photo QSLs will be available from NL7TB (SASE to: J Reisenauer, 23406 East Kennedy Rd., Benton City, WA 99320).

VK9L, LORD HOWE ISLAND. Jun/JH4RHF, Kumiko/JR4DUW (YL) and Hiro/JR4PMX are planning a trip to Lord Howe for their summer vacation during the IOTA Contest weekend. The operation itself will be from July 24-29th or so. The callsigns they hope to be assigned are; VK9RH, VK9YL and VK9MX, respectively (not licensed yet). Please note these callsigns are for VK9L-land. Activity will be 80-10 meters, SSB/CW. There will be some 160m and RTTY activity, if there are many requests. QSL via JH4RHF, for VK9RH and YL (or operation by these two). QSL via JR4PMX for VK9MX (or op by JR4PMX).

XW, LAOS. It has been reported that Zorro, JH1AJT, is in Laos with a group that will be active now until July 2nd. This is not Zorro's first time to Laos as he was there in December, 1989, as XW8KPV. Reports indicate they will operate on as XW1A and on SSB as XW1 (YEP! That is the callsign). The group will be operating on 6 through 160 meters. QSL via JH1AJT.

YJ, VANUATU (Activity on 6 meters!). Stuart, YJ8UU, will be active from Vila over the next 3 years. Look for him to begin activity around July 19th. Operations will be on all bands including 6 meters. His station consists of an Icom 706; antennas are a Gap R5 vertical and a 3 element Delta loop for 6 meters with 2 elements for 20 meters. He will be active daily at 0630z on 50.110 MHz. QSL via ZL2HE.

Z2, ZIMBABWE. "THE 59(9) DX REPORT" states Cedric, N9YXA, will be active on 160-10 meters, mainly SSB, from August 3-21st while providing communications for a church convoy. Callsign is yet to be announced.

ZF, CAYMAN ISLANDS. The Cinco Nueve Contest Group has announced early that they will operate as a Multi/Single from Little Cayman Island as ZF2RV during the CQWW CW Contest, November, 1997. Operators will be: Al, K7AR (ex-WB2TMP, op at YK0A); Lee, N7NU (ex-WB7SND, op at XR0Z); Mark, N7MQ (ZF2MC, and ex-N7MCA); Ron, WJ7R/ZF2RV; and Gene, K7DBV (ZF2BV). ZF2RV contest QSLs are via AA6BB/7; cards for all other QSOs between November 24th and December 3th (including ZF2RV) go to each operator's home call, CBA or via W7 Bureau.

ZP, PARAGUAY. Ernesto (GADX Bulletin Editor), LU6BEG, will be operating from Asuncion as ZP5/LU6BEG from July 9-13th. Operations will be on 80-10 meters CW/RTTY/BLU. During the IARU Contest, he will team-up with Renato as a Multi-Op station using the callsign ZP5XF or ZP0M (to be confirmed). QSL ZP5/LU6BEG to Box 1589 - 1000 CF - Argentina and ZP5XF/ZP0M to Box 1937, Asuncion, Paraguay.

Not exactly, but cut-and-try is certainly a reasonable empirical
alternative to modeling, wouldn't you say? ;-)

Date: Thu, 03 Jul 1997 16:11:20 -0700
From: Curtis Wheeler <cwheeler@ccnet.com>
Subject: Repeater Liability Insurance

Has anyone here (individual, club, etc) had to obtain liabilty insurance
for a repeater? Sometimes, as condition of tenancy at a commercial

site, landlords will require insurance - which is not entirely unreasonable. But what if you were told that in order to renew your lease you had to provide a $1 million policy. Who would you go to for information?

Curtis

Date: Thu, 03 Jul 1997 23:53:11 GMT
From: jcwren@atlanta.com (John Wren)
Subject: Schematics For Icom BC-80 Battery Charger?

I'm looking for the schematics for the Icom BC-80 battery charger, if anyone has taken thiers apart. I tried pretty hard to get the halves separated on mone without breaking it, to no avail. In lieu of schematics, if anyone has determined what the various switch combinations represent, I would be interested in that.

Thanks much.

- John Wren

elines?

Well, yes and no. In the strictest sense, this article violates the rule that only buying and selling advertisements belong in the rec.radio.swap newsgroup. However, since those using this newsgroup are most likely to see articles in the same newsgroup, and since this newsgroup serves readers of the

rec.radio.amateur.*, rec.radio.cb, rec.radio.shortwave, and rec.radio.scanner newsgroups, posting it here provides the greatest visibility with the least intrusion. Other suggestions which achieve the same goals are welcome.

If you are looking for something specific...

Try to first find the item through ot@

From: dgravatt@falcon.cc.ukans.edu
Subject: Need opinions on Dual Band base station verticals

I'm in the market for a dualband base station antenna. It will be mounted in an attic space and needs to have an SO-239 connector. I perused the AES catalog and came up with the following models:

Diamond X-200 or X-300
Cushcraft AR-270B
Comet GP-6 or GP-3

I'd appreciate any and all comments on the performance of these models. Thanks in advance!

>build it, measure it, modify it!

So homebrew precludes being analytical and is restricted to cut-and-try?
How sad for amateur radio.

Roy Lewallen, W7EL

From: "Eric Oyen" <n7zzt@psn.net>
Subject: ref: noise balancing antenna

I seem to be having trouble locating a reference to a noise balancing
antenna. I have tried the ARRL antenna handbook without any success there.
Have also tried asking in 2 other newsgroups (antenna or equipment
related), no dice there. If anyone here has any relevant information,
please point it to me.
Thanks.

From: "Fernando Robalo" <frobalo@mail.telepac.pt>
Subject: Regulament of Diploma Vasco da Gama

DIPLOMA VASCO DA GAMA

REP - Rede dos Emissores Portugueses (CT1REP), with the support of the
Comiss&#65533;o Nacional para as Comemora&#65533;&#65533;es dos Descobrimentos, sponsors this
Diploma which is to celebrate the Portuguese Discoveries during the XV
century and specially the Discovery of the sea route to India by the
Portuguese navigator Vasco da Gama.
This will be a permanent Diploma and all SSB and CW HF contacts (on the
authorised amateur bands) on the different amateur regions will count,
starting on 15th Novembre 1945.
Licensed Radio Amateurs and SWLs world wide are invited to participate.
To qualify for the Diploma participants must have at least 25 points but
with contacts with one sation in Portugal Continental"CT" and another in
India "VU".
Diplomas can be requested on one of the three different modes - SSB, CW or
MIXED, and there will be 5 different classes and 5 different stamps as
follows:
Class I 75 points Golden Lantern
Class II 100 points Golden Compass
Class III 125 points Golden Anchor
Class IV 150 points Golden Astrolabe
Class V 200 points Golden Helm Wheel
There is also a "Honour Roll" for those with 250 points or more.The
participants of this Honour Roll can request the correspondent Trophy which
is a nice filigree miniature of XVI Century Portuguese "Caravela".
Lists of stations awarded with the different classes of the Diploma will be
published in Portuguese Ham magazines and bulletins as well as any foreign
magazines who wish to publish them.
Logs can be certified either by photostat of QSLs or by a GCR list (General
Certification Rule), certified by two different Amateurs or by a certified
amateur radio Association. Should any doubt arise QSLs can be requested.

The Diploma will be awarded free of charge to members of REP (Rede dos Emissores Portugueses), and will cost 1000 portuguese escudos for non members residing in Portugal. For Europe the cost will be US$ 8.00 or 12 IRCs and US$ 10.00 or 15 IRCs for the rest of the World.
Certification stamps for each class are sent free of charge, providing a list of the contacts, certified in the same way as the original log is sent together with self addressed stamped envelope (SASE) or a self addressed envelope (SAE) and 2 IRCs.
For the "Honour Roll" trophy the cost will be US$ 30.00 or equivalent for Portugal or Europe and US$ 40.00 for the rest of the World.
All requests to:

Ed,

I have an even simpler idea. If this gentlemam is so upset with the ARRL that he feels it has to be subverted, why does he not simply join K1MAN's group up in Maine. What is K1MAN calling it tjis week? The American Amateur Radio Association or the International Amateur Radio Network or some such? They would be perfect for one another for reasons that are rather obvious.

There ARE times when you MAY legally listen to Cellular Phone transmissions, so don't say "he broke the law. Period."

He may have been investigating local interference, from or to, the Cellular frequncies or nearby Ham frequencies, or nearby public service frequencies. In which case, you ARE LEGALLY ALLOWED to listen to the Cellular Frequencies long enough to find the problem!

Unfortunatly, the arresting officer was probably as knowledgable of the laws as you are, and that is why so many cases are dissmissed by judges.

Cellular Phone Technicians MUST listen to Cellular Frequencies, or they would not know if the phones are working properly. There are MANY cases in which these frequencies MUST be listened to, and that is why the LAW allows for this. Trying to prove if someone was listening to them Legally, or illegally can NOT be done if the listener is SMART and PREPARED! Remember, the legal system is a great big GAME, and the person with the highest paid lawyer USUALLY in most cases wins.

From: Dave Fischer
Subject: COR (Carrier Operated Relay) Help- Yaesu FT-2200

I have a Yaesu FT-2200, and I need a signal from it of 5 volts when
it receives a signal. I have tried looking at the schematics, and
have opened up the radio and tested many points for a voltage change,
but I have gotten no results.

Could an alternative be to have some sort of ciruit that would
put out a 5 volt signal whenever it detects audio (even full quieting
w/ no modulation?)

When the proper CTCSS tone is received??

Any ideas would certainly be appreciated.

Sounds like the problem I had with my Toyota. Even a marine alternator filter on the output did not cure it. Changed the alternator and all is well. I even removed the filter and still no problem. Try putting a lage cap across the alternator output, like about 10,000mfd or more and see if it goes away. If not, change the alternator. I should add that I had no problem with the alternator not charging the battery and I did not look at the ripple.

Also, make sure the hood is well grounded to the car frame. You might even attach a ground strap between the two, making sure you get unpainted metal of course.

search by callsign:

lyndon@ve7tcp:~> whois -h ve7tcp.ampr.org ve6bbm
VE6BBM
NERENBERG, GORDON LYNDON
10967 - 130 STREET
EDMONTON, AB
T5M0Z6
lyndon@ve7tcp:~>

Doing a search on HELP will return some very basic instructions.
The query strings are not case sensitive.

Having built this little beast I'm thinking it might actually be a
useful tool. Some things I'm thinking of are:

* implement fuzzy matching on names
* query by city, province, postal code
* add date range support to provide allow for callsign
searches based on date ranges (i.e. who had VE6BBM in 1970)
* an e-mail based interface for people without direct
IP connectivity.

An obvious extension would be to add an auxiliary database that would hold
mappings of callsigns to QSL managers. If you searched on a DX
call it would then return the info for the QSL manager in addition to
the license data associated with the DX call.

Comments? Suggestions? Volunteers to write code?

Anyone out there have any pointers to additional sources of
raw callsign databases? (I'm going to incorporate the FCC
database later this week.)

In this situation, where a license may well be on the line, I'd NOT
advise anyone to rely on the interpretation of some FCC "phone
answerer". I would insist on a signed opinion from someone at a
"level of authority" in the particular branch (enforcement) concerned.

Your "recollection of a phone call I had with (someone) at FCC" will
be a worthless defense.

Also, make sure the hood is well grounded to the car frame. You might
even attach a ground strap between the two, making sure you get
unpainted metal of course.

Well appears the Knet Kop Korps win another one.

I am no fan of the usenet style of KD4CDB, but I am even more
opposed to those who would impose their own "standards" on
other people.

If I were UseNet God, I think I'd get together with all my other God
friends and have a big party. We'd all get drunk and create unliftable
rocks, then try to lift them. It would be loads of fun! Then I'd probably
just destroy the rocks with a lightning bolt, rather than send a really
bitchy message to "abuse@rock.com".

The new Digital TV modulation methods will look like broadband noise on a spectrum analyzer. If is is cable leakage and if they have added some digital channels, you should be able to see the noise in 6 MHz chunks. Since you have acces to a spectrum analyzer (SA), I suggest hooking it up to a cable drop in the area and checking for any noise like signal in your frequency range.

The 440 band is shared with radio loaction services. We used to get "radar" interfernece that would sound like a buzz for a second or two reapeating every 8 seconds or so. Perhaps there is a new radio location system.

Yuo might post your question on the listserver that discusses land mobile radio. It is called something like LMR.

Good luck.
Let us know what you find.

| Mail generated on your system for a destination within the |
| 'z2.fidonet.org'-domain, was detected at this site and classified as |
| unwanted. |
| |
| If you bona-fide responded to a listserver your message unfortunately |
| also falls under that category as such type of mail is not accepted |
| nor distributed from here either. |
| |
| 'fidonet.org' is a hobby domain where individual |
| people run individual mailers using PSTN-technology out of their own |
| pocket and every such message adds to the cost. |
| |
| Therfore the original message is bounced back to you at the gate. |
| |
| Fidonet-participants are victimised by thousands of bogus listserver- |
| subscriptions and you may very well be a side-victim of this. |
| |
| In that case your cooperation would be greatly valued by crossposting |
| this mail to the postmaster/owner of the mailing-list/list-server with |
| a request to kick any subscription coming the 'z2.fidonet.org'-domain. |
| We are bothered here by it as much as you are now. |
| |
| If you are residing in the USA then the following notice |
| may apply to you. Please read it attentively! |
| |
| +-------------------------------------------------------------+ |
| | By US Code Title 47, Sec. 227(a)(2)(B), a computer/modem | |
| | /printer meets the definition of a telephone fax/machine. | |
| | By Sec. 227(b)(1)(C), it is unlawful to send any unsolicited | |
| | materials to such equipment. | |
| | | |
| | By Sec.227(b)(3)(C), a violation of the aforementioned | |
| | section is punishable by action to recover actual monetary | |
| | loss, or $500, whichever is greater, for each violation. | |
| | | |
| | I will report any violation 'abuse@postoffice.us'. | |

Well put Mike. Most of these jerks love to abuse policies repeatedly. Glenda posts from Sexzilla,he does'nt have the decency to even stop jerking off between posts. Herman and cracked are both homosexual,a search of deja news proves that. These people don't have lives: they delight in causing people discomfort on what should be a people's forum. they like being the Big bully,but most of them in person are 5'7" and weigh a buck o five. This is the one pathetic little existance where they feel they are in control. But when someone like me comes along and tears their feeble little world apart what do they do? They regress! They cry to anyone that will listen. Unfair! Unfair! They bitch and moan about the same practices that they have been doing for ten years or more. You would not believe the morons that my little adventure flushed out. Extra class hams actively participating in pedophelia,Advanced class hams selling drugs,software piracy,mail bombing,terroristic threats,wire fraud you name it. Bellsouth will not tolerate these activities on their data lines. What a lot of these idiots don't realize is that every internet feed that travels on United States lines is subject to state and federal laws. In a way I feel sorry for these little geeks. They have nothing to fall back on,the amateur radio they so often complain about is almost dead. And they have taken the same dysfunctional seed and lack of morals and brought it here to the Internet. So while I have the key down,I want to thank the hams that helped me behind the scenes on some of the worst ones,you know who you are. To all the ones that have wilfully committed felonies here,good riddance. I look forward to assisting the US Attorney in your prosecution. As for the box,it's still in use.Go ahead and hack into it,there's enough supoenas and search warrants for everyone.

From: Smitty <smitty@northeast.net>
Subject: Parts for Sys Saber UHF NEEDED: Module 202 Anyone sell used Motorola parts???

Does anyone have/sell parts for System Saber V4 UHF portables?
I need Module 202. On mine pin 8 is leaking +v to ground even with the radio off! It is SLN3569A
Any help would be appreciated.
Thanks

Subject: Pye Westminsters for sale.

I have a few ex-council PYE WESTMINTERS for sale.
Convertible to other frequencies?

Comes complete with speaker, mic, control box, 'rubber duck' antenna. All you need to get going!

See web page for ordering details.

http://members.aol.com/sdhe

Goto the 'Surplus Goods' section.

Look at www.icomamerica.com under receivers for either the PCR-1000 or
the R-8500. Both are /can be RS-232 controlled.

Gary

Subject: seeking small marine band frequencies

Seeking small marine band frequencies, as many as possible. Thanks in
advance.

Date: 14 Jul 1997 11:05:47 -0400
From: "Lindquist, Rick, N1RL" <elindquist@arrl.org>
Subject: Solar Update

The solar report from Tad Cook, K7VVV, arrived too late to make the deadline
for The ARRL Letter, Vol 16, No 28. Here's Tad's report:

SUN IS FLAT!

Solar seer Tad Cook, K7VVV, in Seattle, Washington, reports: Conditions are
still flat. The average solar flux, sunspot number and planetary A index
hardly varied from last week to this week. Because short-term forecasts are
based upon the previous solar rotation, no activity is predicted for the
next month, except for a possible slightly unsettled period around July 23
or 24.

W7ZT in Arizona reports he didn*t even notice any seasonal sporadic E skip
on the higher frequencies over the Field Day weekend. W4VOS offered some

comparisons of previous solar cycles. He noted that it is mostly true that each odd-numbered solar cycle was greater than the previous cycle. We are now awaiting activity from cycle 23, so this is a cause for some hope. But with a chart from a 12-year old issue of a DX newsletter which showed cycle data provided by KH6BZF, W4VOS commented that cycle 9 around 1850 was smaller than cycle 8, and cycle 5 around 1805 was much smaller than cycle 4. Will cycle 23 be the third cycle in history to break this rule? Let us hope not.

Sunspot numbers for July 3 through 9 were 12, 12, 11, 11, 26, 25 and 31 with a mean of 18.3. The 10.7-cm flux was 69, 69.7, 69.7, 71.8, 71.7, 71.2 and 70.2, with a mean of 70.5, and estimated planetary A indices were 7, 7, 4, 4, 14, 5, and 11, with a mean of 7.4.

Readers who wish to comment can email the author at tad@ssc.com.

Posting-Frequency: posted on the 1st of each month

This message is a guide to buying and selling over Usenet. It is intended to serve as a guide for users unfamiliar with common conventions used in the Usenet marketplace. Questions and comments may be directed to the author, Jay Maynard, K5ZC, via Internet electronic mail at jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 29 June 1994 to add the discussion about how UPS does COD remittals. Thanks go to readers of the personal radio newsgroups, who provided feedback to the net about proper use of this forum, and especially Paul W. Schleck, KD3FU, pschleck@unomaha.edu, who compiled most of the net wisdom and suggested the creation of this article.

Usenet has proven to be a valuable resource for many folks. Along with lots of discussion, argument, and good, solid information, it's also a good place to buy or sell equipment, and many people have done so successfully. As with any other medium, though, there are conventions that make everyone's life easier if they're followed as much as possible.

The following are some suggested guidelines for using the rec.radio.swap forum, based on general net-wisdom from users. Most of it is basic common sense, but it is unfortunate that some users have consistently abused this forum by not following such basic common sense. The general guidelines will serve as well for other groups on the net, such as misc.forsale and just.about.anything.marketplace.

What is appropriate to post in rec.radio.swap?

Any offer to buy or sell radio and electronics equipment, such as transmitters, receivers, antennas, electronics parts, and radio-related

computer equipment is appropriate for this forum. Posts concerning non-hardware (but still radio-related) items such as documentation manuals, books, radio-related software, and publications, are also welcome.

Please do not post discussion articles to this group. If you really must post, please do so to the appropriate discussion group. Use email whenever possible, especially if you feel someone has committed a breach of etiquette.

Articles concerning illegal equipment (such as CB linear amplifiers and police radar jammers) are not welcome. Not only will you be severely "flamed", you are also opening yourself (and possibly the owners and administrators of your news site) up to civil and criminal liability. Individuals who are involved in the regular business of buying and selling for profit are requested not to abuse this forum by using it as a "free advertisement" service for their business, although they are welcome to participate as individuals. The distinction here is that there is a cultural bias on Usenet, and an actual prohibition on some networks that carry Usenet traffic, against using the net for commercial purposes. Let your conscience be your guide.

Doesn't this article violate its own guidelines?

Well, yes and no. In the strictest sense, this article violates the rule that only buying and selling advertisements belong in the rec.radio.swap newsgroup. However, since those using this newsgroup are most likely to see articles in the same newsgroup, and since this newsgroup serves readers of the rec.radio.amateur.*, rec.radio.cb, rec.radio.shortwave, and rec.radio.scanner newsgroups, posting it here provides the greatest visibility with the least intrusion. Other suggestions which achieve the same goals are welcome.

If you are looking for something specific...

Try to first find the item through ot@

: DUH !!!!

: If in fact Burt was dropped because of his postings, it would only
: make *COMMON* *SENSE*. Most organizations that I'm aware of don't keep
: on as volunteers persons that characterize members (all over usenet
: and packet) of the organization that they are trying to promote as
: "fat, unbathed, sex/wife avoiding, gas emitting, old, white slobs."
: But perhaps in your myopic view of the world they do.

: Gary K8IQ

Well, sorry Gary, but most hams ARE fat, unbathed, sex/wife avoiding, gas emmitting, old white slobs. Burt isn't "trying" to do anything, he's only stating the obvious. Granted, maybe you or your ham friends may not fit Burt's generalizations, but take a look around any large ham type of gathering and you'll see where I'm coming from. In general, and as it stands for the time being, ham radio tends to be a hobby for older white males.

Subject: ARES-RACES Index Page Updated---Today, July 14, 1997

Greetings All,

I just wanted to let you know that the N3XGR ARES-RACES Index Page was
updated this morning. I am still in the process of finding the links that
don't work, and throwing them out, as well as adding new links. I want as
many groups as possible to be listed and I appreciate your
comments/criticisms/additions. Thanks.

Let's not be so hasty.....

Cheap scanners have lousey image rejection. It IS VERY POSSIBLE that a
scanner tuned to a HAM freq will inadvertantly receive a cell phone Tx.

From: bb099@cleveland.Freenet.Edu (Adam Trent Phillips)
Subject: a song for Hams and SWLs

Here's a little song. With apologies to "The Police"

K I N G O F G A I N
(sung to the tune of "King of pain")

There's a little grey Drake on my desk today
It's the same old rig as yesterday
I have a quarter wave with a nice ground plane
It's a little short and there is no gain

I have stood here before inside radio shack.
With the clerk saying nothing but a painful "ACK!"
I guess I'm always hoping I won't return again
But it's my destiny to be the king of Gain

There's a little iron on the roof today
That's my stuff up there.
There's a new GDO on my roof today
That's my stuff up there.
What's the impedance, I just cannot say
That's my "V" up there.
It's got twenty traps, well you don't say
That's my "V" up there.

I have stood here before inside Radio Shack.
With the clerk saying nothing but a painful "ACK!"
I guess I'm always hoping I won't return again
But it's my destiny to be the king of Gain

My antenna tuner just don't seem to work.
That's 7 Megahertz
My wife keeps saying I'm a total jerk.
That's 7 Megahertz
Why am I hearing a McDonalds clerk ?
That's 7 Megahertz
Why is my lawyer wearing a goofy smirk ?
That's 7 Megahertz

I have stood here before inside Radio Shack.
With the clerk saying nothing but a painful "ACK!"
I guess I'm always hoping I won't return again
But it's my destiny to be the king of Gain

There's a signal on 49 with the sidebands washed out
There's CW on 160 metres ham no doubt
I hear a man calling out from Albania
I think I am going insainia

King of gain
I will always be the king of gain ....

(Here is an alternative Chorus for Hams)

I have sat here before inside of my ham shack
I am so tired I want to hit the sack
I guess I'm going to miss a night's sleep again
'Cause my destiny to be the king of gain

Tell me what you think =-)

And please, don't bother mentioning some little typo. To quite
Foghorn Leghorn; "It's a joke, son !"

From: "Edward Witt" <superted@worldnet.att.net>
Subject: CABLE TV--FREE DECODER PLANS--

Now you can get new plans to build a Cable Descrambler System, US and UK
plans.

This is not the origonal Radio Shack plan (now obsolete), but a choice of six new up to date plans designed to work on any cable box in any area. Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area, and you will be able to view all premium and pay per view channels.

It works on all Cable Tv Systems. The parts to make the box cost appoximately $15 (depending on the plan) and you can find them at any local electronic part supplier(US Residents will be supplied with radio shack part numbers). British Sky Cable descrablers cost approx 20 Pounds. Remember this is for educational purposes only, you still have to pay for the channels you view. I have to say that to protect myself for any liablity.

For the Plans just send $ 2 or 2 Pounds to:

Ed Hacker
409 Adams Street # 7
Hoboken, NJ 07030
USA

The reason I charge two dollars is for the stamp, envelop, and paper your plans are on. I am doing this for you not for me to make money. Lets get real you cant buy much for two bucks. I am not in this for the money but to get back at the cable companys that over charge people.

CABLE HANDBOOK (Additional $2)

Everything you ever wanted to know about cable boxes. Includes a cross reference list for upgrading your box using upgrade converts, cubes, plug-in activators and service code-generators. Also explains general cable operation, this handbook is very COMPLETE, a must have!

TURN ME ON!

Turn on all your premium channels with nothing to buy.

The Notch Filter

A notch filter allows you to selectively descramble channels. For instance, if HBO is on channel 7 and Cinemax is on channel 14 or pay-per-view is on 22, you may build a notch filter to descramble each of those channels. This method is fairly simple to build; However, it requires several more parts than the Fifteen Dollar Box. This system will work on your cable system, no matter what frequency your cable system operates on. A cable box is NOT REQUIRED, and parts cost in the range of $25-30 depending on how many channels pay channels you wish to descramble. NOTE: I used channel 7,14 and 22 as an example. Your premium services may be on other channels and the notch filter can be built for whatever channel your premium services are on. (between the range of 2-22) Parts can be purchased from a electronics wholesaler/retailer in your phone.

The Gated Sync is the Grand Daddy of descramblers (in band and out band). It can be configured to operate on your cable systems frequency. This system is for the serious home electronics buff. It is a bit more complex

to build; However, it sells for a lot of money. And, it will descramble EVERY channel.

SSAVI was created by Zenith, and used by many Zenith converters. The system is very difficult to build, but it will descramble EVERY channel, and also sells for a lot of money. Novices should not attempt to build the SSAVI system.

FREQUENTLY ASKED QUESTIONS

What is a Descrambler?

A descrambler is a device that restores the picture and sound of a scrambled channel. In most cases, ALL channels which are scrambled will be restored.

Are Descramblers legal?

YES! It is legal to build, sell, ship, use, and own a descrambler; However, when you use a descrambler, it is your responsibility to notify the cable company that you are accessing their signal.

Do I need a converter from my cable company?

In most cases NO. A cable ready VCR or TV will work.

Is it difficult to build a descrambler?

Turn me on, the Fifteen Dollar Box, the Oak converter and the Foil method are very simple methods! The instructions provide step by step instructions. No special skill or knowledge are needed. The Notch filter is still fairly simple. The Gated Sync is not for the beginner, it requires electronics knowledge.

Can I build more than one?

YES! You may build as many descramblers as you want! They are legal to sell and demand fairly high prices!

Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area
For the Plans just send $ 2 or 2 Pounds to:

Subject: Canadian Callsign WHOIS Server

This weekend I implemented a WHOIS based callbook server for Canadian
callsigns. This started out as a benchmark for a simple
database engine I needed for a work related project, but then I
discovered the Canadian callsign data on the RAC website and decided
to test the code with some live data :-)

The server contains data from the RAC (Radio Amateurs of Canada)
callsign database as of July 3, 1997. For now you can only

>thru 160m,only allows HF access to members who hold General or above
>tickets.....Maybe he interprets part 97 differently:<)

You don't read well. A Tech or Tech+ operating on a repeater segment of
2m or higher can freely access a *crossband repeater* station licensed to
someone with the appropriate class license with an output in the 10m repeater
sub-band. The repeater can be under automatic control, no control operator
needs to be present. Repeaters are not permitted to operate below the repeater
band segment of 10m. Period. So if the Extra is operating a repeater to bands
below 10m, he is in violation of the regulations. But that isn't what he's
doing.
Below 10m, he is operating a remotely controlled station. (Remote base is not
a term recognized by the FCC.)

Any amateur station may be remotely controlled, but it may not operate
under *automatic* control unless it is operating as a repeater in sub-bands
where repeater operation is permitted. A control operator must be in control
of the station at all times that it is not operating as a repeater. The station
may
only operate to the limits of that control operator's privileges. If he is an
Extra,
the remotely controlled station can operate anywhere he wants, but if he is a
Tech, he can't operate the remotely controlled station below 6m. If he's a
Tech+,
he can't operate it outside his authorized frequencies, and that does *not*
include
the portions of the 10m band above 28.5 MHz. If a General, he can only operate
inside General segments. Etc.

Now the station license holder has three choices about how the station is
operated. First, he can outright loan the station equipment to another amateur.

The station then operates under the station call sign of the person to which
the
loan has been granted, and under the operating privileges of that person's
operator
license class. This case is very simple to understand.

Second, he can designate someone as control operator and let that person
operate the station. The station continues to operate under the station license
holder's station call sign, but its operations become limited to those
permitted by

the operator license class of the designated control operator. In essence, the station
license holder has loaned his station to the other operator even though it retains the
station license holder's station call sign. The station owner need not be present.

The only real difference between the two cases of transfer of control is that in the
latter case both the station license holder and the control operator are jointly responsible
for its operation. In a closed system, there can be multiple designated control operators,
each limited to operating the remotely controlled station under the privileges granted
by his license class. This type of operation is common for club stations operating in
some sort of event so that scoring occurs under a common call sign. It does a Tech
no good below 30 MHz, of course.

(Note that there is something subtle going on here. An amateur has two
different authorization instruments, his operator's license, and his station
license. They are printed on the same piece of paper, but they are legally
separate things. The call sign is assigned to the *station* and not the operator.
Operating privileges belong to the operator, not the station. Only when the
station license holder (not to be confused with the equipment owner, who
can be different) and the station control operator are the same person do
the two authorization instruments merge. Since this is the way most amateurs
routinely operate, the distinction isn't often noted or understood. But when we

start dealing with repeater or shared access remote controlled stations, it
becomes important.)

Thirdly, the station license holder can allow persons to operate the station under
his control as *third parties*. He is in control, and the station can transmit
anywherehis operator license class permits. It doesn't matter a whit what license
class the third party has. The third party can even be unlicensed if he is physically
present or accessing the station via non-amateur means. Or if the third party is a
Tech or higher, he can access the station on a frequency where he is authorized to
operate a station in auxillary service, IE 222 MHz or above. Note well that accessing
a remotely controlled non-repeater station on 2m is illegal because auxillary operation

is not permitted there, and such access is considered auxillary operation.

Regardless, a Tech accessing this remotely controlled station is operating as a

third party, and third party regulations fully apply. That means, for example, that he cannot talk with a station in a country with which the US does not have

a third party agreement. So if your Extra is allowing Techs to talk with European
stations on HF, he is in violation of the regulations. Note that the FCC has been
known to turn a blind eye to this violation of third party regulations when the third
party is an amateur, but it is a violation of the letter of the regulations nonetheless.

A further note. Ordinary operation through a repeater station is not considered third
party operation of the repeater station. This can cause some confusion. A station in
repeater operation can relay amateur signals without falling under third party rules.
Stations *using* the repeater may fall under third party rules if they are conveying
their own third party traffic. Note that it is the station performing third party traffic,
not the repeater station, which is operating under third party rules in this case, IE if
you let your wife or kid talk on your radio, *your* station is in third party operation,
but the repeater you are using is not. But a repeater phone patch is always third party
operation *for the repeater station*, and requires that a control operator for the
repeater be present. That's because the repeater station is directly participating
in third party traffic in that case and not merely relaying amateur signals.

A station under remote control operating outside of a repeater sub-band is not in
repeater operation, and doesn't enjoy this freedom from third party regulations.
The two systems may appear to operate identically, but they fall under different
regulatory restraints. This may appear to be splitting hairs, but that's what happens
when you start dealing with law and lawyers. Common sense often goes out the
window (though in this case it all does make sense if you think it through.)

So to summarize, stations acting as repeater stations relaying amateur signals
do not need a control operator present. And this includes *crossband* repeaters
which transmit on frequencies outside the operating privilege range of some of

the stations which they repeat. Remotely controlled non-repeater stations
always
require a control operator to be present. That control operator can be one and
the
same as the person accessing the remotely controlled station. In that case, the

remotely controlled station's operating privileges are limited to those of that
operator. But if the person accessing the remotely controlled station is *not*
the
control operator, then the remotely controlled station is engaged in third
party
operation, and all third party regulations apply.

What's this mean to the Tech? If he is accessing a crossband repeater from

Subject: Need opinions on Dual Band base station verticals

I'm in the market for a dualband base station antenna. It will be mounted in an attic space and needs to have an SO-239 connector. I perused the AES catalog and came up with the following models:

Diamond X-200 or X-300
Cushcraft AR-270B
Comet GP-6 or GP-3

I'd appreciate any and all comments on the performance of these models. Thanks in advance!

Subject: Regulament of Diploma Vasco da Gama

DIPLOMA VASCO DA GAMA

REP - Rede dos Emissores Portugueses (CT1REP), with the support of the
Comiss&#65533;o Nacional para as Comemora&#65533;&#65533;es dos Descobrimentos, sponsors this
Diploma which is to celebrate the Portuguese Discoveries during the XV
century and specially the Discovery of the sea route to India by the
Portuguese navigator Vasco da Gama.
This will be a permanent Diploma and all SSB and CW HF contacts (on the
authorised amateur bands) on the different amateur regions will count,
starting on 15th Novembre 1945.
Licensed Radio Amateurs and SWLs world wide are invited to participate.
To qualify for the Diploma participants must have at least 25 points but
with contacts with one sation in Portugal Continental"CT" and another in
India "VU".
Diplomas can be requested on one of the three different modes - SSB, CW or
MIXED, and there will be 5 different classes and 5 different stamps as
follows:
Class I 75 points Golden Lantern
Class II 100 points Golden Compass
Class III 125 points Golden Anchor
Class IV 150 points Golden Astrolabe
Class V 200 points Golden Helm Wheel
There is also a "Honour Roll" for those with 250 points or more.The
participants of this Honour Roll can request the correspondent Trophy which
is a nice filigree miniature of XVI Century Portuguese "Caravela".
Lists of stations awarded with the different classes of the Diploma will be
published in Portuguese Ham magazines and bulletins as well as any foreign
magazines who wish to publish them.
Logs can be certified either by photostat of QSLs or by a GCR list (General
Certification Rule), certified by two different Amateurs or by a certified
amateur radio Association. Should any doubt arise QSLs can be requested.

The Diploma will be awarded free of charge to members of REP (Rede dos Emissores Portugueses), and will cost 1000 portuguese escudos for non members residing in Portugal. For Europe the cost will be US$ 8.00 or 12 IRCs and US$ 10.00 or 15 IRCs for the rest of the World.
Certification stamps for each class are sent free of charge, providing a list of the contacts, certified in the same way as the original log is sent together with self addressed stamped envelope (SASE) or a self addressed envelope (SAE) and 2 IRCs.
For the "Honour Roll" trophy the cost will be US$ 30.00 or equivalent for Portugal or Europe and US$ 40.00 for the rest of the World.
All requests to:

* Continuation 1 of a split message *

2m to 10m, the repeater can be under automatic control, and the Tech can
talk to European stations, IE to stations in countries with which the US has
no third party agreement. But if he is accessing a remotely controlled non-
repeater station, he is either A) limited to the privileges of his operating
class
if he is acting as control operator, or B) is operating as a third party under
the
supervision of the control operator, and all third party limitations apply, IE
he
can't talk to Europeans. (I use Europe as an example because the US doesn't
have third party agreements with most European nations.)

Subject: The ARRL will live forever

I don't agree with most out of Burt's mouth, but this is right on the nail head. All you have to do, is to listen to most nets (ARRL approved) and hear " Just wanted to get on the payroll". In other words, they have absolutely nothing to say and they cannot get a QSO of their own. A vast waste and most of them are ARRL members and proud to be members of a "rat pack".

POOR DEVILS !

W5YHY

C l o s e d C i r c u i t A d v i s o r y

The following is a closed circuit advisory. We have received word from our support fund administrator that the monies needed to pay the our monthly bills is again dangerously low.

Yes, there are many sources of ham radio news, but for the past twenty years, nobody has been able to bring you this news as quickly and as accurately as Newsline. The ham magazines have a two to four month lead time. The various ham radio newsletters are at least a week or two behind what's happening. Only Newsline brings up to the minute ham radio news direct to you over your favorite repeater. That means you can tune in at home, in your car or even walking down the street while listening on your hand held radio.

But doing this costs money. It takes over $1200 a month to keep Newsline alive. Recognizing this, several years ago we established the Newsline Support Fund. It's kept separate from Newsline and exists only to pay the week to week operating expenses. And, it again needs the support of all of you who want to see Newsline survive so that these weekly bulletins can continue to air.

The address for the Newsline Support Fund is:

Newsline
P.O.Box 660937
Arcadia, California
91066

Your assistance is needed as soon as possible. We thank you all for your ongoing generosity and support.

That ends the closed circuit advisory with Newsline report number 1039 for release on Friday July 11, 1997 to follow.

(*****

The following is a QST

A spaceship to spaceship QSO by ham radio and a research panel says that there is no link between power line radiation and childhood cancer. These stories and more on Newsline report number 1039 coming your way right now!

(*****

Mike Foale on the air from Mir

U.S. Astronaut Mike Foale, KB5UAC, continues to keep busy operating the ham radio station on board the crippled Mir space station. Last week he made a couple of contacts with the crew on board the shuttle Columbia during its STS-94 mission.

On Saturday the 5th, Foale and the space shuttle Columbia's skipper chatted twice by ham radio. Columbia and Mir were passing within 150 miles of one another when contacts were made. Commander James Halsell said he was able to talk with Foale for only 30 to 45 seconds on each pass. This, as pilot Susan Still spotted the Mir through binoculars.

But Mike could not run his usual high power with the Kenwood radio on board the Mir. Earlier he reported that when he put the radio into its high power position it began pulsating. Ham radio controllers believe the problem is one having to do with the power available on board the Mir. News reports say that its only at 70% of normal. They told KB5UAC to run the radio at medium or low power to avoid the problem. Mike has been doing that ever since, and the problem has gone away.

(via AMSAT, others)

Foale's first contact

Before his contacts with the Columbia, the QSO that got the most publicity was Mike Foales' first one after the mishap. It was made only a few days after Mir collided with a Progress supply ship.

With power back up to 70 percent of normal, Astronaut Mike Foale, KB5UAC on board the Russian Space Station Mir is back on the air.

As the Russian crew works to repair the Mir after its collision with a supply rocket back on Wednesday the 25th, Foale has been heard on the air working stations worldwide. One report that has gotten worldwide media attention was a QSO he had with a ham here in New Zealand identified as Alan Leech, ZL2DAL. Leech says that Foal told him it was "pretty scary" to have a ten ton rocket crashing around up there.

A supply ship carrying additional food, oxygen and cables needed to reroute power from the solar panels outside the Mir to the power core inside arrived on Monday the 7th. The Russians hope to launch a specially trained crew to begin repairs to the Spektr within the next two months.

(*****

MIKE FOALE TO HAMS WORLDWIDE

Now that the emergency situation on the Mir space station under better control, U.S. Astronaut Mike Foale, KB5UAC, has taken the time to thank the world ham radio community for its concern. He sent a message to Dave Larsen, N6CO, the president of the MIREX group, and asked that the ARRL and Newsline pass it along to you.

Only one problem. The keyboard that Mike is using on board thee Mir is in the Cyrillic Russian alphabet. Some of the keys differ from the IBM and Mac standard to which we are accustomed here in the U.S.A. So some OF Mike's words were a bit choppy and in a few spots we had to take the liberty of guessing at what he was trying to say.

We think we came close and here is Mike Foale's message to every ham on Earth:

"The Mir crew is very grateful for all the good wishes and interest over the world, in our troubles and tribulations. In particular, to the few hams who work tirelessly on our behalf to pass on news events in the world, and in particular how the world press is reacting to our situation. That is very valuable to us. We do not get this sort of opinion from our controllers.

During the extended power down of Mir after the collision, communication with Moscow was predictable, but totally congested with essential technical conversation. It was impossible to get any personal news of our well being to our families, in a personal way, by means of the official communications, but ham radio allowed us to fill the gap. I and my wife are extremely grateful to those hams who passed our messages for us.

We are particularly interested in longer contacts, rather than simple QSO exchanges. It is good to be able to tell people about our life here on Mir, and our problems, but the lives of Hams on the Earth are also interesting to us. I hope more hams will take the time to tell us about there QTH and surroundings also.

Signed: Mike Foale, KB5UAC

"To which it seems apropos for this editor to add, Mike if you have any way to hear us, we hams on Earth are proud to have you representing all of us in space. And special thanks to N6CO for the relay."

(*****

No cancer link to EMF

On the medical front, there's good news for ham radio and anyone living near power transmission lines. Researchers studying health effects of electromagnetic fields have concluded that power lines do not increase the risk of leukemia in children.

The new findings were to be published in the July 3rd edition of the New England Journal of Medicine and is expected to relieve some of the fears that surfaced in the late '70s and early '80s. This, when some scientists claimed that they though they had found a connection between cancer and the fields given off by power lines and electrical appliances.

But this latest study financed by the National Cancer Institute and the University of Minnesota's Children's Cancer Research Fund found just the

opposite. It looked at 638 children with acute lymphoblastic leukemia and
compared their living conditions with those of 620 youngsters without
cancer. They also had engineering teams measure electromagnetic fields in
each child's home and at former homes. The researchers also checked to see
if the mother lived near power lines when she was pregnant. They
discovered that no matter how they measured a child's exposure to power
line fields there was no evidence that the children with leukemia had been
exposed to more electromagnetic energy than healthy children in the control
group.

FCC seeks comments on petitions

The FCC is soliciting comments supporting or opposing three Petitions for Rulemaking. All affect the Amateur Service. First is RM-9115, filed in March by the American Radio Relay League. It requests that the commission amend its rules to expand the ability of stations active in the Radio Amateur Civil Emergency Service to communicate with non-RACES amateur stations and to relax the time restrictions on RACES emergency drills and tests.

Next is RM-9106, also filed by the ARRL. It solicits amendment of rules governing the Amateur Service to authorize operation on 7,100 to 7,300 kHz in American Samoa.

Then there is RM-9113, filed by Jerry J. Johnson, WA3WZF, Laurel, Maryland. Johnsons petition asks the FCC to permit retransmission of emergency weather information by any ham station authorized to transmit FM above 144 MHZ.

Finally, RM-9114, filed by James Cardillo-Lee, KE6VGV, Petaluma, California. KE6VGV asks that the Commission change the Amateur Service rules to permit hams who are emergency personnel engaged in disaster relief efforts to use ham radio frequencies while in paid-duty status.

Comments are due within 30 days of publishing in The Federal Register.

Kevin David Mitnick, N6NHG, sentenced

One of the nations best known computer hacker will remain in jail. This, following his recent sentencing in a California federal court.

A federal judge says that convicted computer hacker Kevin David Mitick, N6NHG, must stay away from all computers, cellular telephones, the Internet and anything else remotely like a computer, once he is released from prison. In sentencing Mitnik to serve 22 months in prison for using a cloned cellular phone and violating parole, U.S. District Judge Marianna Pfaelzer issued new and extensive terms for Mitnick's parole once he is released. She said if he even tries to operate a cash register outside prison, he must have permission from his probation officer.

In explaining her action, Judge Pfaelzer said she is trying to encompass as much of the expanding computer industry in her order as possible. This says Judge Pfaelzer, to keep Mitnick from on another hacking spree once he is released. Judge Pfaelzer did not order Mitnick to pay any restitution, because she says that he does not have the ability to do so.

Assistant U.S. Attorney Chris Painter says, technically, Mitnick has probably served his time while awaiting sentencing. However, he will remain in custody awaiting trial on another more recent indictment. In that one, Mitnick and an alleged co-conspirator have already pleaded not guilty to 25 counts of computer and wire fraud, possessing unlawful access

devices, damaging computers and intercepting electronic messages in an unrelated case.

(Via Newsline)

(*****

Divulging content a no-no

Ironically, the FCC chose the week of Mitnicks' sentencing to reiterate the law that governs confidentiality of telephone and other telecommunications. This, in response to what the agency calls numerous inquiries from the general public.

According to the Commission, section 705 of the Communications Act prohibits the interception and divulgence or beneficial use of certain radio communications, including cellular, cordless telephone and personal communications service calls, without the authorization of the sender of the communications.

The Commission adds that this prohibition applies to all members of the public, including members of the news media and news media organizations.

(Via FCC Release)

(*****

FCC fines

Also, the FCC has amended Section 1.80 of its rules to incorporate, by reference, the Commission's Forfeiture Policy Statement and the schedule of forfeitures. A News Release on the action is available on the agency's webpage at

Tower space disappearing

Tower space for ham radio repeaters may soon become very scarce. This as a by-product of an FCC mandate to broadcasters to begin getting advanced digital television on the air within the next two years. The problem could actually reach epidemic proportions.

Amateurs and broadcasters alike, could find themselves without places to build new communications towers. So says the National Association of Broadcasters in a petition before the Federal Communications Commission. The NAB wants the FCC to take quick action to brush aside some government regulations.

And if that is not a big enough problem, compounding the situation is the eminent switch of broadcasters to the all new digital tv which may require some broadcasters to construct new towers.

The petition, filed with the FCC on May 30th, asks that the FCC adopt a rule preempting certain state and local restrictions on the placement, construction and modification of broadcast facilities.

Further the petition before the FCC points out that the FCC already has the power to overturn such rules. The U.S. Supreme Court has stated that "State and local regulations may be preempted not only by congress, but also by a federal agency acting within the scope of its congressional delegated authority."

What does all this have to do with amateur radio? As tower space becomes more and more limited, amateurs will find it harder and harder to find tower space for amateur repeaters, remote receiver sites and packet node locations.

Some tower owners are already requiring tower tenants to vacate their towers in anticipation of digital tv and the need for additional space on their own towers.

For years, tower owners have tried to sell all the space they could on their towers for money making purposes. Now they need that space for their new digital tv transmission antennas. Broadcasters will be required to not only broadcast the new digital tv format, but also maintain the current tv transmission service for a phase in period of up to 10 years.

Amateurs will find tower space at a premium for many years to come.

If you have a yearly contract for tower space, now might be a good time to go and negotiate a long term lease. Do it before rates go up and you are forced to vacate your repeater or remote base site.

Two sent to prison for tower climber death

The owners of a communications tower company have been sentenced to serve three months in prison for safety violations. This for an accident that resulted in the death of an employee who plunged 150 feet to the ground in 1995.

OSHA says it was able to show that the company owners knew about certain safety violations and tried to cover them up. The owners are alleged to have bought safety equipment after the accident but claimed that the climber was wearing the gear when he fell.

A posting on the OSHA web site shows that the employee killed was a 20 year old male and that the fines levied in the case by OSHA alone total over $130,000.

JOHN GLENN

And while he is not a ham, NASA may be warming up to Senator John Glenn's dream of returning to space 35 years after becoming the first American to orbit Earth. The 75 year old Ohio Democrat and the space agency are seriously talking about it according to an article appearing in a recent edition of the Orlando Sentinel. It reported in its online edition that NASA has discussed the idea with the senator, and is giving it further consideration.

Glenn flew on Mercury 6 and circled the Earth three times in 1962. He has repeatedly said he would like to make a second flight as part of a study on how space flight affects aging. If Glenn ends up in outer space, he would be the oldest human ever in orbit. Story Musgrave, 61, set the record last year.

For Glenn to fly again, NASA would have to change its policy against civilians in space.

Ham Radio Fredrichshoffen

Europe is bucking America's trend of declining attendance at hamfests and conventions. This with the announcement that 20,800 hams turned out at this years Ham Radio Convention held in Fredrichshoffen, Germany. This is an increase of almost 3% over 1996, and comes close to this years 26,000 plus that showed up in Dayton last May for this years Hamvention.

According to Newslines Mitch Wolfson, DJ0QN the big difference he noticed was the shift back towards ham radio and away from computer oriented goods. Mitch says that the convention had a definite move towards computers the last few years, but this now has stopped. He says that there were very few computer only dealers this year, and the prices were not better than in his hometown of Munich. All in all, Ham Radio 1997 was one of the best attended ham radio outings held anywhere in the world so far this year.

If you're connecting it to a db9 connector, connect the yellow wire to pin 2, the orange wire to pin 3 and the black wire to pin 5. You would need to connect the power/data module to an external power source, so connect the red wire to a 12 VDC battery and jumper another wire from the black wire and connect it to battery ground. Have fun.

C'mon Hans, the only ones who "imposed" their "own standards" on
anybody was Bellsouth:

>Thank you very much for taking the time to inform us of this
>situation. In accordance with BellSouth.net's Appropriate Use
>Policies, the Internet services account of kd4cdb@bellsouth.net will

Apparently KD4CDB violated his terms with his provider. Keeping the
behavior a secret from the provider does not make the violations go
away, and notifying the provider of the behavior does not impose
anything on anybody.

From: "Greg Dell'Agnese" <gdell@geocities.com>
Subject: REQ: INFO ON HAM LICENSES (CANADA)

I would like information on how to get a license in Canada plus the cost
of doing the test and the cost of a call sign and all that information
for a person who wants to join in on all the action... I know I have a
good chance in passing the test 'cause I have a high school OAC (GRADE
13 for all you people outside ontario) in electronics plus a computer
technical OAC and I know a bit of morse code.

Any info anyone can give would be helpful.

Thanks,
Greg Dell'Agnese

From: jtomason@usa.net (Joe Tomasone)
Subject: NOTICE OF RECALL: SECTION MANAGER OF NYC/LI SECTION

Those noted at the end of this letter have all signed
the original copy. There is also supporting documentation
that accompanies the printed version.

AN OPEN LETTER TO MEMBERS OF THE NYC/LI SECTION OF THE ARRL:

As you may or may not be aware, we have initiated a motion to recall (remove) the Section Manager, Len Buonaiuto, KE2LE. Mr. Buonaiuto has demonstrated a large misunderstanding of his position, who his appointed volunteers are, and the limits of his authority. He has also mismanaged his staff and removed established volunteers without notice or recourse. We find that KE2LE is acting

in a reckless manner and that his actions threaten many of the successful ARRL programs in this section and their relationship with local served agencies.

The ARRL by-laws require this matter to be brought up for a vote by all of the Members of the Section. We strongly urge you to vote to recall the Section Manager, Len Buonaiuto, KE2LE, for the following reasons:

1. KE2LE solicited volunteers for District Emergency Coordinator positions for

boroughs of New York City via APRS packet during the end of June, apparently ignorant of the fact that each borough already has an Emergency Coordinator, and that there is an existing District Emergency Coordinator for the entire city (Marc Kaufman, WB2DWC) who has been in the position for 5 years. When WB2DWC contacted Mr. Buonaiuto, he was told that he was not on the list of appointees. WB2DWC then attempted to verify this with Mario Maltese, WF2T, the

Section Emergency Coordinator, who informed him that he was, indeed, on the list. These facts may be verified with the parties concerned. Conclusion: Mr. Buonaiuto either had no knowledge of who his appointees were or was not truthful.

2. Mr. Buonaiuto removed Andrew Feldman, WB2FXN, from his position as DEC of Suffolk County without any form of prior notification or due process. While the Section Manager retains the right to do so, it is customary and fair for review and due process to be followed in such cases.

3. In a letter to officials of Suffolk County Fire, Rescue, and Emergency Services, Mr. Buonaiuto stressed that WB2FXN was to return his County keys and that they should be issued to the new DEC. Since the ARRL does not make decisions for Government Officials and WB2FXN as the RACES Radio officer is appointed by the County Government, KE2LE's "request" was denied on it's face.

Conclusion: Mr. Buonaiuto does not understand the limits of his position or the

ARRL's authority.

4. Shortly after learning that his action would not remove WB2FXN as the RACES

Radio Officer, Mr. Buonaiuto, without invitation or appointment, appeared at the office of the Commissioner of Fire, Rescue, and Emergency Services. His attempts to speak to the Commissioner or his deputy were rebuffed and he was asked to remove himself from the premises. Conclusion: Mr. Buonaiuto acts unprofessionally in the name of the ARRL and damages long-standing efforts to improve the image of ARES and the League with County officials.

5. In removing WB2FXN, Mr. Buonaiuto did not seek the advice or counsel of his

Section Emergency Coordinator, Mario Maltese, WF2T. In fact, his actions were in direct contradiction to WF2Ts earlier recommendation NOT to remove WB2FXN that was given based on interviews with those who had complained to him. In protest, WF2T resigned as Section Emergency Coordinator, although he was later convinced by others to remain. In protest of KE2LE's actions, Jim Everett, WB2ZIE, has resigned as Local Government Liaison for Easthampton and Southampton Towns. Sam Streger, WA2UXY, has resigned as Emergency Coordinator of Huntington Town. Conclusion: Mr. Buonaiuto mismanages his staff and ignores their counsel in their areas of responsibility and expertise, and causes capable and respected people to resign in anger.

6. Mr. Buonaiuto chose the Suffolk County ARES/RACES net as his vehicle to announce WB2FXN's removal as DEC. He did not inform the Town Emergency Coordinators of the removal or of his intentions beforehand or even seek their counsel on the subject. This was a completely unprofessional and thoughtless action on Mr. Buonaiuto's part.

7. In correspondence to Joe Tomasone, AB2M, dated June 13, 1997, Mr. Buonaiuto

said of AB2M's list of references in his application for the APRS Assistant Section Manager position, "All your reccomenditions are fine except one, no names mentioned.This one may get you passed by in some cases." WB2FXN was among the list of references, and this statement was made 10 days before WB2FXN

was removed from his position. Conclusion: KE2LE apparently follows "guilt-by-association" in his decision-making processes instead of deciding things based on their merits.

8. Frustration over KE2LE's actions has angered some ARRL members in New York City so much that they are contemplating petitioning the ARRL to be removed from the Section and to form their own Section. This was confirmed in a telephone call with Division Director Frank Fallon. Conclusion: KE2LE is fracturing not only ARRL programs, but the Section as well.

9. Mr. Buonaiuto has refused certified letters sent to him regarding these matters. He has also declined to return related phone calls. Conclusion: Mr.

Buonaiuto is unwilling to listen to the members of the Section on matters important to them.

Mr. Buonaiuto's actions have caused severe damage to the ARES/RACES programs in

this Section, have called into question the image and professionalism of the League, and have caused respected people in the section to resign their appointed positions. Please consider these matters carefully -- the future of all ARRL programs such as ARES, NTS, the Official Observer program, and the Local Government Liaison program literally rides on your vote. Is Mr. Buonaiuto's handling of these matters what you expect from a leader and from your local ARRL representative? If not, then please vote affirmatively for the

recall when you receive your ballot.

Marc Kaufman, WB2DWC, ARES District Emergency Coordinator,
RACES Radio Officer, New York City

Mario Maltese, WF2T, Section Emergency Coordinator, NYC/LI

in Skywarn or Amateur Radio is welcome to participate.

>>>> info laser
The LASER reflector is intended for use by anyone interested in
free space laser communications.

Associated with this reflector is a website located at:
http://www.qsl.net/wb9ajz/laser/laser.htm

For more information contact either:
k3pgp@juno.com
or
wb9ajz@qsl.net

>>>> info marcnet
This is the info file for the marcnet mail list about the
Marin Amateur Radio Club, in Marin County, CA, USA.

Mail List Information:

Obtain a complete packet of information by sending e-mail to the
automated
list server as follows:
To: majordomo@qsl.net
Subject: (optional for your use)
Message Body:
info marcnet (This file)
intro marcnet (Explains about messages to be sent to marcnet@qsl.net)
index marcnet (marcnet files available)

subscribe marcnet (News releases about Marin Amateur Radio Club)
help (explains commands to be sent to majordomo@qsl.net)
list (List of mail lists available through majordomo@qsl.net)
end (ends command lines)

The server machine @qsl.net is a unix machine which is case sensitive.
If you have a MIME compliant mailreader, you may prefer to subscribe
to marcnet-digest rather than marcnet. To do this, instead of the
command subscribe marcnet, use the command:
subscribe marcnet-digest

Anyone interested in furthering the amateur radio service
is welcome to subscribe.

Marin Amateur Radio Club information:

Marin Amateur Radio Club extends a warm welcome to you, and invites
you to our free meetings, library and events.

Please read both the intro and info files of marcnet,
and browse if you are able

http://www.qsl.net/w6sg

For those in Marin County, you may find answers to your questions
in the Ham Radio conference and local ham radio web pages,
by local modem call to Infoway at 898-8427.

To contact the Marin Amateur Radio Club,
w6sg@qsl.net
(415) 883-9789
POBox 151231, San Rafael, CA 94915-1231

Free Public Meetings:

Monthly General Membership Meeting:
First Friday of each month beginning at 7pm in the Conference Room
at Kaiser Hospital, Building 2, the first building on the left
after turning right from Novia Albion Way onto Monticello Road.
Schedule: 7pm social; 7:30 Business Meeting called to
order; 8:00 Program Presentation; 9:00 social.

Weekly Sunday Morning Net
Everyone is invited to the San Rafael Red Cross station w6sg of MARC
at 712 5th Street slightly East of Lincoln. Schedule 8am open doors
and put out coffee; 8:30 informal social; 10 am operate w6sg net
control
of the emergency preparedness net; 10:30 cleanup; 11 am close up.
These meetings offer a small congenial group for introducing
yourself; meeting local amateur radio operators, and learning about
amateur radio.

Monthly Business Meeting
Restricted to members, all members welcome to attend, (you may come

and become a member at any meeting). Third Thursday of most months
at 7:30 pm at San Rafael Red Cross (see above). Meeting lasts about an
hour.

Coming Events:
MARC VE Testing...All levels, June 7, Sept 6, Dec 6 1997 test site
Kaiser
Hospital Building 2; Registration 0845, Testing 0900
For more information: Send SASE to Radio Exams,POBox 176 Petaluma,CA
94953-0176. Candidate Requirements: A photo id, or two non-photo ids.
Original and copy of current license. Any original valid CSCEs and
photocopies, radiotelegraph license if held. Medical exemptions.
Fee is $6.05, except Novice is free. Test Dates may change.

Nets:
Licensed Amateur Radio Operators are invited to check in to the
emergency practice nets as guest and get on the roll call.

Sunday Morning Net:
10:00 am PDT (local time) w6sg 3.915 MHz LSB
10:15 am PDT w6sg 147.33 +600 PL 203.5 MHz FM

Monday Evening
7:30 pm PDT RACES 147.33 +600 PL 203.5 MHz FM
8:00 pm PDT ACS 147.33 +600 PL 203.5 MHz FM

Memberhip Information
MARC is a membership corporation. All power ultimately rests
with the vote of the membership. You are invited to join.
Membership is granted upon payment of dues:
Regular Individual: $25
Family Membership: $30
Student/Retired: $20

The MARC Membership Chairman is Pete Wolford, N6IYU
POBox 151231, San Rafael, CA 94915-1231
Your money will be accepted and your membership begun upon
receiving your funds by mail, or at any meeting.

Services
To support the amateur radio service mission, MARC provides
a free technical library open to the public, technological educational
and training programs in it's classroom, and supports
FCC license VE testing programs for (free novice exams) for
nominal charge to members and public alike.
The MARC offers free use of it's amateur radio station w6sg
to licensed amateurs who are members or their guests.
The MARC maintains the MARS station at Hamilton field for
use by licensed amateurs in the armed forces, and provides the
amateur radio operators who become trained and licensed to
operate the MARS station for the benefit of the personel of
the armed forces.

Listowner:
Don Phelps, n6mce is the listowner, administrator and
moderator of marcnet, and Marketing Chair of MARC.
If computer automation leaves something to be desired,
send Don n6mce compliments and appreciation or even an
inquiry about MARC at:

don.phelps@juno.com and begin the subject line "MARC".

==========
Welcome to the Magellan Amateur Radio Repeater
Network (MARRN) Mailing List!
==========
==========

IMPORTANT NOTICE:

THIS IS A FREE MAILING LIST SUBSCRIPTION SERVICE.
Thought I'd say that up front. I've noticed that once
anybody reads the word "subscription" they always think
they have to cough up money in some form or another.

If you received this mailing without subscribing to
this list, then somebody has subscribed for you. I
do not add anyone to this list without a subscription
request. Read below for unsubscription information.

This list has been setup, courtesy of Al Waller, K3TKJ
of QSL.NET. If you have a homepage, or thinking of
setting up one, consider making qsl.net your home.
Check it out at http://www.qsl.net/.

>>>> info srqares
This is the Sarasota County, Florida, ARES/RACES mailing list. This
list
is used to inform Sarasota County ARES/RACES members of local ARES/RACES
activities, as well as discuss ARES/RACES topics of local interest.

For more information on Sarasota County ARES/RACES, please visit the
Sarasota Emergency Radio Club Web Site, at
http://home1.gte.net/wd4ahz/serc.htm
and go to the ARES or RACES pages for more details.

>>>> info vintage-radio
Thank you for your interest in the Vintage Radio List. I am sure that
this

list will prove beneficial to anyone who is interested in the
collection,
restoration, and operation of vintage radio equipment. While this list
will
deal mainly with American-made amateur radio receivers and transmitters,
other makes are welcome so long as they fit the category of "vintage".
To
qualify for vintage status a set must be 25 years old and preferably
contain some vacuum tubes. This category can include military, home
broadcast sets, commercial equipment and homebrew equipment. Any
homebrew
equipment using vacuum tubes and operating CW or AM will be considered
"vintage" equipment no matter what the age. Accessories such as keys,
antenna tuners, wattmeters, test equipment, etc. is also considered a
part
of the Vintage hobby and will be welcome if it is at least 25 years old.

I sincerely hope that you will join our group of vintage enthusiasts.
With
your help we can make this a great List. If I can answer any questions
that
you may have please contact me at >wa4kcy@qsl.net.

A special "thank you" to Al Waller, K3TJK, for hosting the QSL Net
Vintage
Radio List and providing it free of charge to all who want to
participate.

information to this list.

If you have any comments about this list, please send
them to my attention at kf6giu@qsl.net <Benjo Totanes>.

==========
==========

How to use this list

To send messages to the list, send them to
marrn@qsl.net

To subscribe to the list, send a message to
majordomo@qsl.net with the following command in the
BODY of the message (NOT the SUBJECT, leave the subject
field blank):

subscribe marrn <your email address>

To unsubscribe again, follow the above and simply replace
the "subscribe" command with "unsubscribe".

Information about the MARRN list

Primarily, this list has been set up to discuss issues
regarding HAM radio and issues relating to the Magellan
Amateur Radio Repeater Network. Other messages will be
allowed -- as long as they relate to the whole group and
not directed at a single individual.

Who can subscribe? Anyone who is interested with the
group's activities.

About MARRN

Magellan Amateur Radio Repeater Network (MARRN) is a
non-profit Filipino-American HAM Radio group based in Los
Angeles California, USA. Currently, our repeater inter-tied
network covers most of So.Cal (from Ventura to San Diego
Counties to Tijuana, Mexico) approximately 275 miles of
coverage, currently the widest coverage of any Fil-Am Ham
radio groups in the United States. We are working on the
completion of our radio link to San Francisco, CA area and
eastward to Las Vegas, NV , targeted for 2nd Qtr 1997.

Licensed Fil-Am amateur radio operators from California are
welcome to join. For information or membership to the club,
contact Jim Pastor at ko6dm@qsl.net.

Current Club coordinated amateur radio repeater frequencies:

1285.475 MHz - Santiago Peak, Orange/Riverside/San Bernardino
1285.550 MHz - Mount Otay, San Diego area
1285.600 MHz - Mount Lukens, Los Angeles area
1287.700 MHz - Eagle Rock, Los Angeles Remote Base

Pocono Amateur Radio Klub,(PARK), W3PRK, has been the Eastern
Pennsylvania's
premiere radio club since the mid 1950's. Our members enjoy public
service
communications, DXing, digital modes, ragchewing, VE testing, and just
socializing with other hams. We would love to hear from other hams
around
this beautiful country or around the world. Please feel free to E-mail
us
at: park@qsl.net

>>>> info ppares
==========

Welcome to the Pikes Peak ARES List Server!
District 14 ARES, El Paso and Teller Counties, Colorado

==========

This automated list server will automate what has been done manually now
for over a year. Thanks to Al Waller, K3TKJ, at QSL.NET, for hosting
this list. Check out his server at http://www.qsl.net/.

This PPARES list is intended to serve those registered with Pikes Peak
ARES, aka District 14, Colorado Section. This district encompasses all
of El Paso and Teller Counties in Colorado. District 14 is one of
twenty-nine districts in this ARRL section. Contact Larry Dunn, N9HSW
(ldunn@rmi.net), for information about ARES. Contact Rob Roller, WB7WHT
(wb7wht@qsl.net) for information about this list.

Some Info about District 14 Meetings and Nets:

There are no regularly scheduled ARES meetings. However, there are
fairly regular EC/AEC meetings which are called by the EC when
necessary.
In general they are held about once per month. Listen to the District
14 ARES Net for the date/time of the next meeting. If you can't make it
to the meetings, there are several on-the-air nets that you are
encouraged to participate in:

* Tuesdays, 1900 on 146.97- Pikes Peak FM Assn repeater - District 14 ARES Net
* Sundays, 0800 on 3928 kHz (80 meters) - Statewide ARES HF Net
* Sundays, 0830 on the Colorado Connection - Statewide ARES VHF Net
* Mondays, 1900 on 144.22 MHz, USB - Colorado ARES Two-Meter SSB Net
* Daily, 2000 on 146.97- Pikes Peak FM Assn repeater - Southern Colorado
Traffic Net
* Daily, 1230 on 146.97- Pikes Peak FM Assn repeater - Severe Weather Net
(during severe WX season)

On the Internet, the Colorado Section of ARES has a web page at
http://www.usa.net/ares/ares.htm. On this page, you can get some
reference information like who is the EC in which district and the times
of the district's on-the-air net(s). There are also bulletins related to
Colorado ARES on the page as well as a list of what's coming up on a
section-wide level.

You can also subscribe to the Colorado ARES e-mail list by sending a
message to majordomo@rmsd.com, and typing in the body of the message:
subscribe aresco.

The Pikes Peak ARES web page is at http://www.qsl.net/wb7wht/dist14.htm.

For those with packet radio, current ARES information is available by connecting to the District 14 ARES Cluster (located at the Hewlett-Packard building in Colorado Springs) on 144.93 MHz. Its callsign alias in ARES14.

>>>> info programit
The PROgramit! list has been set up for
people who have built or who are interested in building my very inexpensive computer interface to control and download almost any scanner on the market. Information about the project is currently posted at http://www.geocities.com/SiliconValley/Way/1522. It will soon be moved to the qsl-net server. At that time, I will post a link to the SW as well.

The purpose of the list is to:

1. Stimulate interest in project building and in this particular project. I hope that more people will take on the project knowing that others are around to help out. I will be checking the list many times each evening and often on weekends to see if I can be of help.

2. Share your success story(ies) and describe any problems that you overcame or any special construction technique you used. I have learned a few new ones from the first people that built already.

3. Keep you informed of the latest updates and to bounce ideas for new features off you.

4. Collect the best of your ideas to incorporate into the SW. Now how often do you get that opportunity?

5. Share any follow-on SW that members develop. For example, if you have a way to convert some database to the format used in PROgramit!, please share this with the group.

6. Share information about how to wire the interface into specific radios. I will incorporate this into the WEB page as well.

I hope you will build up the interface and become a contributor to the project and to this list. 73s

John Montalbano
KA2PYJ

Date: 15 Jul 1997 05:27:30 GMT
From: bb099@cleveland.Freenet.Edu (Adam Trent Phillips)
Subject: "Bird song" QRM

Debate on CW aside, I was wondering if some OM or YL out there
happens to be familar with a certain type of QRM I heave heard recently on
BBC. It's only on their 49 metre band signal at 5.975 MHz signal, usually
around 04:00 to 05:30 Zulu.

The QRM sounds like a "Morning Glory" or similar bird that is
common to the midwest US (people near my Ohio QTH should hear it around
sunrise every spring through summer). I know the sound is electronic for
three reasons

(1) I hear it only from an indoor music source (like a press
confrence or from the studio)

(2) It is WAY too regular and consistent to be from a real bird.

(3) I remember reading many years ago about a form of QRM that
sounded like a bird. I think people where using them on CB's in the 80's a
lot.

If anyone knows, or can jog my memory, I would be thankful.

73's

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text

you can say "ha ha" and of course on voice you would sound like an idiot

if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

It would seem that the one crying is you Mr. O'Brien but whatever. I did think of another couple of reasons why I can't be more like you; my parents were married and not otherwise related.

Fetal alcohol syndrom combined with a diminished gene pool can be a terrible thing. I suppose you can't really help how you are but that doesn't make you any more palatable.

I am sorry to hear of the passing of your Bellsouth account, meeting you has been an interesting experience. This has been my first encounter with a person whose IQ and sock size were exactly the same. Sorry about the polysylabic verbage but I just can't seem to bring myself down to the level of your vocabulary.

Perhaps you can find someone who actually has a GED to explain the above to you.

Watch out for those DUI checkpoints,

Jerry

PS I'm married with several children so that 'fag' dog won't hunt.

Best place to begin would be the (moderated) NG rec.radio.broadcasting,
devoted to domestic AM and FM broadcasting. Equipment manfacturers, DJs,
station managers/owners, station engineers, all reside there. Even our
own anti-ham ham, Drew, hangs out on there...

Subject: CBers on 10 meters?

In article <19970713153200.LAA21424@ladder01.news.aol.com>,
Nitramham <nitramham@aol.com> wrote:

>Apparently your FCC official didn't consider them a "signal" either. This
>is where things become kind of convoluted. We are becoming more emotional
>than rational within this issue and hearing only what we WANT to hear.
>Part 97 does not say, "Legal or illegal communications." It does not say,
>"...to any radio communication." It says, "...to any radio communication
>OR signal." My emphasis on OR.

The definition of "radio communication" or "signal" is up for debate,
since neither term is defined in 97.3. However, I think most amateurs
would agree that "radio communication" involves two or more stations
engaged in a conversation and/or data transfer (since there are non-human
"communications), whereas a "signal" originates from a single party,
such as someone calling CQ, or a beacon station.

>Now, if you and I were to fight this out in court (just an example as I
>have no interest in pursuing this outside of r.r.a.m.) I would win based
>on what is printed in the FCC rules.

I think you grossly overvalue your self-worth.

>I am not an attorney, don't get me wrong. I HAVE taken some law classes
>and am a LITTLE familiar with how to read this text objectively...besides
>I have posed the same question (as yours to the FCC official) to a couple
>of attorneys (one of whose name is Tom Stennis--who taught one of my law
>classes--and who is the grandson of the late Mississippi Senator John
>Stennis) Tom's response led me to believe he interpreted it the same way
>as I.

Well, I don't know Tom offhand, but unless Tom is a communications law
attorney, or is familiar with applicable case law on the subject, I'd have
to take his expert legal analysis with the same grain of salt that I take
the rest of postings on USENET. Now, if your attorney was Phil Kane, your
conclusion might have more weight.

>On another note, lack of enforcement to the rules isn't because the FCC
>doesn't care as many seem to attempt to have us believe. But it takes
>money. We all know that the FCC has been severely cut in the funding
>arena. Enforcement is based upon priority (my assessment here) or letters
>to Hillary.

No disagreement here. Any society, including ham radio's society, quickly
degenerates to anarchy if there is no "law and order". There are a

multitide of socilogical reasons for this.

Tell you what, you cite where 47 U.S.C.F.R Part 97 states that interfering

with any communication, including unlawful communications is unlawful, and
I'll provide facts. Otherwise, the quote of your material above seems to
apply just as much to you as to the folks to whom you're responding.

Yes, especially *YOURS*, according to your flawed logic if the CB'ers
showed up on 14.313 (no different than 28.0xx) then all of the
LICENSED operators would be in violation for causing interference. I
hardly think so. (Though if might be hard to differentiate who's who)

Prove me wrong , I want "fact" not "opinion"

As far as being a "vigilante" , I use the term "self policing" , in my
area at least, persons who cause malicious interference on vhf/uhf get
tracked down and an end is made to their operation. Unfortunately it's
much more difficult to do on HF.

From: mark russo <mrusso@hoflink.comNO.JUNKMAIL>
Subject: LOOKING for FM TRANSMITTER , Kinematix "IMP II"

Hello to all.
I'm looking for this little tunable FM transmitter (87-108 MHz)that
was made in the late 1960's by Kinematix, model number "IMP II".
It's 3 x 1-1/8 x 2-3/4 in size.
It's black and has a slide power switch on the front.
A microphone could also be plugged into the top. It was tuned
with a plastic tuning tool. This gem is in the 1967 Lafayette

Radio catalog for $39.95.
Does anyone out there have one of these at the bottom of a draw?
If so, and if it's in working order I'd like to buy it from you.
Let me know how much you want for it.
Please e-mail me direct at: mrusso@hoflink.com
THANKS, Mark N2FLF

NOTE If you want to E-mail me, you MUST REMOVE the NO.JUNKMAIL in my address. It should read: mrusso@hoflink.com I'm trying to stop the unwanted Junk Mail. SORRY for the inconvenience but it's getting out of hand.

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

From: onlinebiz@mlmail.COM
Subject: THIS IS IT!!

Hello!

How would you like a Software Disk that creates Thousand of LEADS for your Primary focus program and Tons of CASH in your mailbox all at the same time?

This powerful Software System is going through ALL of the MLM companies like nothing before. This is because it doesn't compete
with anyone's primary program...it enhances and compliments it!

If you decide to participate, you will never have to scratch around for someone to present your MLM program to again. You will have THOUSANDS of LEADS as a result of using this Software System. And the Big added Bonus is that you will also have CASH in your mailbox EVERY DAY, because Each of the Thousands of Qualified Leads generated by this Software System PAYS YOU $20 each to send them the info about your Networking program. Do the math...it will blow you away and keep you awake tonight!

This is NOT MLM. This is a one time expenditure. There is no monthly order obligation, no company with which to share your bonuses and commissions, no pre-ordained pay periods, no terms and conditions that you must follow. There is no company to go bankrupt, change their compensation plan, raise the price of their products, draft your checking account, hold your commission checks. There is no company... except for you. YOU ARE THE COMPANY!

You don't need to have a computer to do this, just access to one. You don't have to be in business to do this! But if you are, you'll never find a better way to promote your program, product or service.

And ... ANYONE... ANY AGE... ANY COUNTRY can participate!
No Social Security #, no Federal ID #, and no US address is required!

You have nothing to lose by checking this out... the risk is all mine. If you decide not to participate, show it to someone who's financial status is

important to you. They will thank you every time they go to their mail box.

For full details hit REPLY NOW!

I've had success using a combination of Liquid Wrench, a hammer
to loosen any rust, and a scissors or hydraulic jack. Be careful
with the jack that you don't seriously bend any cross members and
that you don't apply enough force to cause pieces to let loose.
If you work at it slowly, you should be able to get the sections
apart. Of course, it is always fun to be doing this sort of stuff
while your 40+ feet in the air!

73 and be careful,
Todd

Well Greg, I understand how you feel, however, it's a two way street.
To have
a store with no "retaped" or returned merchandise would mean a strict no
return policy.
What are we supposed to do with stuff people buy and for no reason other
than they
decide they don't like or need it return it for full refund? Please be
carefull with how
broad a brush you paint Radio Shack stores or employees. There are
aprox 1700 privately
owned RS stores like mine. Everything in my store had to be bought and
paid for so when
you return something I hav@

Thanks!

>South and west on cw?
>Are you afraid someone on hf in the states will give your pisswater
>signal a 3/2?

No, I'm using a "wire beam" strung between two buildings on campus.
Wire beams can't be rotated - I'd have to rotate the building, and
the university won't allow me do that.

>I'd watch that shell at the university,they're keeping an
>eye on your cheapskate ass. Can't even afford legal internet access,have
>to route it through a shell.

You've got me perplexed again. I've got a UH UNIX account, and use a
Wyse terminal hardwired to the UNIX machine from my office. Whatever
you see when you finger me is what I've been using for about 6 years
now. I guess you must not be familiar with UNIX.

>to didge that marriage question,let's check something...1/4/54,

Yep, still single! I'm 43 and my girlfriend is about 20 years younger.
Eat your heart out!!!

>Perry
>University of Guam...that's interesting.Why are you single and living in
>Guam?

I'm in Hawaii, James!

>I'll get back with you later,I'm going to make you my project boy.

Without even lifting a finger I've got you wasting your time. This
is great! We've at least got one thing in common: We're both pro-
code. There's a CW email list if you're interested: Send a note to
majordomo@qsl.net and only write subscribe cw your@email.address
and you'll be hooked up.

Take care, friend,
Jeff KH2PZ / KH7 <--- that means I'm in Hawaii, James.

This coming Sunday..

*** !!!! WE ARE BACK IN THE GARAGE !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
July 20th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)

Harvard Wireless Club (W1AF)

Have to say I wish more RS people were like you ;-) ... I have had quite varied experiences with salespeople at various locations; shortly after I got my CSCE and callsign I went into one store and was told quite bluntly that no way, no how, could I even get questions answered about an HTX-202 or 404 without *showing* the salesperson my license. I went to another one and was not only allowed to look at one and try out features, but the salesperson even let my try and hit a local repeater. (Did, too, BTW.) Same approach, same situation, different trust level. Email me and I can relate the specifics if you're more interested.

That said, I have noticed a lot of rogue transmissions on 2m and 440 both, which on a dual bander can be distracting if you're on a long friendly QSO with the gang and someone belches into the mike on 440.

> Amateur radio,although I would be in favor of such a law.

Not sure I'd go that far, but it might be a good thing to come down harder on people who make this hobby less enjoyable. The whole point of the amateur service is to make it work well for everyone, and that includes the unpleasant job of policing our part of the spectrum. If there had been such a law, it almost certainly would have turned me off the idea of getting my license, so I'm sure there are other people who feel the same way ... Maybe if we made it a point to make the VEC exam flyers and Gordon West's test books readily available right by the ham equipment at RS? (I keep GW's Tech book around for a good read -- it's pretty entertaining as well as informative..)

> decent memory, is akin to having a conversion table sitting next to you
> so you can translate all the dits and dahs you hear....

I have to concur with that one .. 5wpm, if you do the math, translates
to a character about every two seconds, so you do indeed have the time
to look it up dit by dit and dah by dah and still copy it. If it's
Farnsworth (15/5) spacing it's even easier because there`s no doubt
where one character ends and another begins.

No, I'm not a Tech+ yet, but that's because I was too lazy to take 1A
when I went to take 2 and 3A. Did get a perfect score on 3A, though ..

I guess technically it would be, but according to the regs 10m belongs to us and not CB, so it's their responsibility to move if they interfere with us. Besides, how is anyone going to know you're not just trying to punch a DX call through the interference? It's not like CB'ers can copy code or anything ..

Unless enough people complain. If someone is making enough trouble to get a group of people calling and griping to the FCC, it will get results. Not quickly, but eventually it does catch up to them.

Now, base operators are a lot easier to shut down than mobiles, but I'm sure if someone is enough of a nuisance they can be tracked down in time. Then again, just ignoring them and simply making a point of working the bottom edge of the band as much as possible might be a more effective approach. Just be sure not to overmodulate and slop over into Channel 40 ..

I guess the rule of the day is "use it or lose it" -- they got channels 24-40 from us by aggressive usage, and we've lost other bands by similar means (take 220-222 MHz as an example) -- so let's keep as much spectrum as we can, eh? Who knows, if we keep it long enough you just might hear me there. ;-) 73, folks.

I can confirm this -- they even tell you that if the radio is operating
illegally. If they do any kind of enforcement action the interference
just mysteriously disappears. Kind of eerie ..

Greetings Steve,

It's the same in USA -- may even be the same protocol as AMPS and NAMPS phones frequently cross the border in both directions. I have the list of channel frequencies at home, and they range from 840 to 890 or thereabouts, with more or less standard offsets for input and output frequencies. (Sort of like a very fancy repeater that controls your radio's tuner and power level..)

Incidentally, completely off the subject, I heard a VE call here in TX the other day. Got pretty excited about the E-layer skip till I found out he was visiting Austin and working the local repeaters.. ;-) did work Gonzales and hear Houston though..

Yes Richard,

Press "F" and then the "LAMP" button. The light will stay on
continuously. It will also about double the power consumption if you're
listening on dual band (which is why Kenwood made the normal lamp
function momentary), so try not to do it on battery power any longer
than necessary. I've drained the battery down pretty good doing that.
But if you're on a DC cord, the backlit display is nice, especially
while driving in the dark and trying to figure out whether you just
bumped off the channel or everybody signed off ... Incidentally, this
gets written into the EEPROM, so you have to do F,LAMP again to turn it
off or it will remain on every time you turn on.

After going through my collection of old 6m QSL cards from the 60's I came across one that brings back fond memories. The card was from Jim Grindle, W9QS "Queer Signal", (The Voice of the Sand Dunes). He operated a "Big Guns" 6 meter station from the Indiana Dunes using a 1KW AM station and a pair of stacked beams on a 100 ft tower. I was told by a local Ham that Jim is now a silent key.

I was wondering if anyone, that was living in the mid-west back then, remembers working Jim's power house station and if you might have any pictures of his shack and/or antenna farm. He also owned a Yatch that was equipted with enough gear to operate 160 through 6 meters!

Find the nearest yard sale. I saw telephones for $5.00 a couple of weeks
ago. Each one had such a thing in it. The "500" set conversions actually
could accept either dials or touch tone keypads.

OK, well, but I've heard truckers on 2m too. They're hams as well, and
they ID and observe ham rules, but they do QSO pretty frequently here.
Apparently the QRM is getting too much for the pros too ...

Actually, it's not vigilante action at all, it's just that a bunch of
Extras get together for a long QSO and drown out any AM that might be on
the frequency. If you have a Novice ticket or above (except mine, alas)
you have a right to priority use of the frequency, and if they
interfere, they have to move. Period. According to Part 97.

Sorry, I just took my exam and all this is too fresh in my head ..

Hey,

Are you going to have Carl Stevenson on as a "counterpoint" guest
telling Will and everyone listening how they are a bunch of
CBers, yackers, beepers, etc. because they are having "fun" with
radio doing all these non-technical wastes of time (repeaters,
contesting, DXing, etc.) ?

Just wondering.

:>the salesman was demonstrating the frequency range of a scanner to a
:>customer when we started hearing a quite titillating (guy-gal ;))
:>conversation on cell phone. Neither the customer nor the salesman
:>could explain it until I butted in and told them it was an image
:>frequency from the cellular phone band. FWIW if you'll check the
:>newsgroups alt.radio.scanner and rec.radio.scanner you'll see that
:>some who like to listen to cell phone conversations have made a
:>science out of determining their scanners IF(s) and listening to the
:>image frequency which is the cell freq + the IF.
:
:An image will always be spaced 2*IF from the frequency indicated
:on the tuning display of the radio. Whether that's 2*IF above or
:below the indicated frequency depends on whether the receiver
:uses low side or high side injection.
:
: So if you were listening at an indicated 909 MHz, the scanner has a
:10.7 MHz IF, and the scanner uses low side injection, then the cell
:frequency being imaged will be 887.6 MHz. If the scanner uses high
:side injection, indicated frequency will be cell frequency - 2*IF. In this
:example, it would be 866.2 MHz. That's locked out too, so in this case

866.2 should not be locked out since it is not in the cellular range.

Barry

1223. INDOOR ANTENNAS AND RF EXPOSURE

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-16 00:00:00 UTC
From: kerls@swbell.net
Message-ID: <33CDC1BB.351E@swbell.net>
Source record: 193483

I was wondering if anyone could help me with this. I about to recieve my technician license and am about to buy my first 2m and possibly 70cm rig soon. I am also a college student living in a dormatory. Since I am living in a dormatory I can't put up an external antenna. My question is this. Is it safe to have to have an indoor antenna and do indoor antennas meet the new fcc guidelines on rf exposure. If it is safe to have an antenna indoors at what wattage should I operate at to still operate safely. Also, how would I mount and install a 2m indoor antenna and what type of antenna should I use. What about radios? Should I use handheld or mobie with low power settings? I have thought just buying a handheld and not worrying abot the antenna, but I have heard that it is unsafe to operate handhelds indoors. I am not sure if this is true or not. Another problem with handhelds is that the nearest repeater is about 15 miles away and I am not sure a handheld could reach that far. One reason that I am inclined to buy a mobile is because of its higher power, and the fact that during my vaction I would be at home with access to an external antenna and would be about to use that higher power safely. I am very new to the world of ham radio and am very inexperienced. I would appreciate any help that anyone may be willing to give.

Thanks and 73

Brian.

> (interference, splatter, unlicensed users in our bands, etc.)

Amen. I can also sympathize with wanting to move these guys to a more
benign part of the spectrum ..

Incidentally, I had an incident (before I got licensed) with a rogue
11-meter 'operator' who apparently had gotten hold of a kilowatt or
two. I was experiencing various problems with all sorts of stuff that
shouldn't be affected by RF at all -- some you may remember this story
-- and proceeded to call the FCC and report this. They did give me the
standard spiel about how correcting the interference was my problem,
etc. and I didn't hear anything back.

However, for mysterious reasons, the interference completely stopped a
few months ago. I don't remember exactly when, but anyway, I did notice
one day that **ALL** the antenna equipment had been removed from this
joker's roof. Quarter-wave, bracket, coax, insulators, everything.

If I didn't know better, I'd swear somebody's toys got confiscated. ;-)

So take heart, folks -- reporting this stuff does get results. If you
run across somebody on 10m that shouldn't be there and an attempt at
friendly persuasion doesn't work, you do have some enforcement options.
It helps to be have a good grasp of radio theory, but field notes
weren't necessary in my case. (I'm sure a DF and field strength plot
wouldn't hurt though ..)

And yes, true confessions time, I used to be a CB'er back when it was
fun. I quit when the QRM got to the point where the radio was worse
than useless...

Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.swap

The STD World Wide Web pages have been completely revamped. Our web site now links to practically every known major source of solar and geophysical information on the Internet in a very easy to use menu-driven environment. Many amateurs and professionals are using this site as a primary data source for things ranging from current solar and geophysical activity reports to the most recent 10.7 cm solar radio flux measurements, geomagnetic activity indices, warnings and alerts and much more. We welcome everyone to visit it.

http://solar.uleth.ca/solar

It is best seen on 800 x 600 monitors using a Frames capable web browser such as Netscape.

1227. Info Please - Kenwood TK-340

Newsgroup: rec.radio.amateur.misc

I have 2 Kenwood TK-340 hand held radios. Looking for information on them. They currently on a repeater but I don't know who's. I just bought these at a pawn shop and have 2 weeks to decide if to keep them.

Info I am looking for:

What freq range are these: My guess is 440-470

Watts:

What is this booster-pac (cig lighter on one side - AC DC converter on the other)

What type of accessories are available and where.

THANKS VERY MUCH

Has anybody found the frequency limitations of this scanner? Are there any modifications which would improve the 800mhz response?

Please help, the wife just brought this home as a b-day gift which I get to use for NASCAR, they only play during the weekend but I want to have fun all week long utilizing this radios full potential.

Thanks.

Hi Dick,

How many guys are making screw-driver antennas? I went to your site and it claims a patent. Also Don Johnson W6AAQ claims a patent on it at his site W6AAQ@mother

I keep hearing about this screwdriver for 3-30 Mhz mobile and from the photos at your site it looks to me like a long coil mounted at the base and a whip comming out of the top. An electric screw driver turns a long screw that adjusts the slider inside the coil to adjust it.

I scrounged a similar coil made a long time ago by Master Mobile (I think). It's not as fancy or automatic as the screw driver, but it should work. The problem is I can adjust it to resonate at the correct freq. but the impedance is VERY low. I have an AUTECK RF-1 (A digital sorta MFJ-259) and I get a reading of around 10 ohms.

Both your site and Dons describe a matching network at the base. Is this network a toroid transformer or something? Hows it work? Could I use T-200-2 powdered iron toriod. How would I wind it?

> Any information would be appreciated.

Yes, it's true. the article was in QST and the Antenna does sound to
good to be true. If you'll read the article, you'll note that while
height and longer wire make the antenna better, it is not very efficient
when short and low especially on the low bands. But it does Match on all
frequencies. The QST article is in the November 1995 issue, page 22.

Looking at the article it's one *@#$#@% fine concept!

Now, if someone will only put one up and do a report on it.!

* Continuation 1 of a split message *

period.

3) Entry Classification: Single Operator and Multioperator, Two Transmitter. Multioperator stations shall keep a separate log for each transmitter. Multioperator stations must have at least 10 minutes between band changes. Use of helpers or spotting nets by single operator entries is not permitted. Single operator entrants may only have one transmitted signal at a time. Output power must be

limited to 150 watts for eligible entries.

4) Contest periods:

RTTY: 1800 UTC July 19th to 0600 UTC July 20th, 1997

Multioperator stations may operate for the entire 12 hour period. Single operator stations may operate 10 out of 12 hours. Off times must be at least 30 minutes in length and must be clearly marked in the log.

5) Mode: RTTY only in RTTY parties.

6) Bands: 80, 40, 20, 15 and 10 meters only. You may work a station once per band. Suggested frequencies are: 3585, 7085, 14085, 21085 and 28.085 on RTTY.. Try 10m at 1900Z and 2000Z 15m at 1930Z and 2030Z etc.

7) Exchange: Operator name and station location (state, province or country).

8) Valid Contact: A valid contact consists of a complete, correctly

copied and legibly logged two-way exchange between a North American station and another station. Proper logging requires including the time of each contact. Regardless of the number of licensed call

signs issued to a given operator, one and only one call sign shall be utilized during the contest by that operator.

9) North American Station: Defined by the rules of the CQWW DX Contests with the addition of KH6.

10) Scoring: Multiply total valid contacts by the sum of the number of multipliers worked on each band. Multipliers are states (including KH6 and KL7), Canadian Provinces (Canadian multipliers are: British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Quebec, New Brunswick, Nova Scotia, PEI, Labrador, Yukon, and NWT) and other North American countries (do not count USA, Canada, KH6, or KL7 as countries). Non-North American countries do not count as multipliers, but may be worked for QSO credit.

11) Reporting: Send North American QSO Party RTTY logs to: Ron Stailey K5DJ, 504 Dove Haven Dr., Round Rock, Tx 78664-5926.. Entries must be postmarked not later than 30 days after the party to

be eligible for trophies and awards. An proper entry consists of (1)

a summary sheet showing the number of valid contacts and multipliers

by band, total contacts and multipliers, total score, team name (if any), power output, name, call sign, and address of the operator, station call sign and station location; (2) a complete legible log of all contacts (including dupes marked as such) with indication of multipliers claimed; (3) a separate check sheet for each band; and (4) a list of all claimed multipliers worked on each band. Logs, summary sheets and check sheets may be home made or patterned after those published periodically in the NCJ. Logs may be submitted

on disk in the form of files generated (.BIN & .SUM) by WF1B program

or MS-DOS ASCII files consisting of all information in (1)-(4) above

if generated from a program other than RTTY by WF1B. All entries should include a written, signed statement of "Fair and Ethical Operation".

12) Team Competition: Team competition is limited to a maximum of 5 single operator stations as a single entry unit. Groups having more

than 5 members may submit more than one team entry. PRE REGISTRATION
REQUIREMENT: To qualify as a team entry, the name, call sign of each
operator, and call sign of the station operated should the operator be a guest at a station other than his own (e.g. K1NG op by WF1B) must be registered with K5DJ. The team registration information must be in written, telegraphic or e-mail (k5dj@easy.com) form and must be received before the start of the NAQP. There are neither distance nor meeting requirements for a team entry. The only requirement is pre-registration of the team.

13) Penalties and Disqualification's: For each unmarked duplicate QSO, you lose that contact plus an additional three contacts; for each QSO for which you are not in the other stations log, you lose that QSO plus an additional one contact; and for each QSO for which the log data is incorrectly copied in any respect, you lose that contact. Entries with score reductions greater than 5% will be disqualified. Any entry may be disqualified for illegibility, illegal or non-ethical operation. Such qualification is at the discretion of the NCJ Contest Review Committee.

14) Awards: A plaques will be awarded for the high score in each of the following categories:

- Single operator RTTY--Plaque Sponsor: Glenn Vinson, W6OTC
- Multioperator RTTY----Plaque Sponsor: RTTY by WF1B

Certificates of merit will be awarded to the highest scoring entrant from each State, Province, and North American Country. With at least 200 QSO's.

COMMENTS: We now have an RTTY NAQP. It's a short 12 hour sprint - a non-DX blast for low power stations. (150W max.) The object is to work as many North American stations as you can, so that makes it a rate-contest first, and let mults fall where they may. There are band mults, so there'll be lots of mults to keep track of. This kind

of contest will help you to smoothe out the rough edges of your operating skills by keeping you alert and quick. If your choice mode

is CQing, you'll get into a routine of "one-key-itus" when using logging software, especially when using "RTTY by WF1B" and callers use "DE" in front of their calls. If you want to increase your skills
with "Search and Pounce", its a matter of how quickly you find CQs and how short to make your call and exchange. Try not to break the standard exchange, such as sending your call and the exchange before

contact has been established. It disrupts the rhythm of the routine and thus slows the rate of the CQer. If the station you're working is
loud, send exchange just once. Hint: when assigning "F-key" messages,
set the exchange for a one-time shot. If there is lots of QRM, hit the F-key twice but be sure you set a proper break between the double
(like <CR> or space).

<kd4cdb@bellsouth.net> writes:
>

James,

Please consider this notice that I do not want any email from you.

I recall your complaints about unwanted email yet you emailed a copy of your trash to my mailbox. I don't really care what you have to say. You have not the whit nor the inteligence to interest me. I find your changing my family name offensive but I also realize it reflects much more on you than me. Keep up the good work, if you have not already acomplished it, you soon will be the most hated individual on the rec.radio newsgroups.

If you really want to find a group with an interest in you I suggest a psychology or a .proctology group.

Oh BTW be a man and admit you lost your Bellsouth account there are people much smarter than you on the newsgroups, when you fake headers you will be exposed. But then being a man may be more than you can do.

Have a short unhappy life

Jerry

Ma Bell made an upgrade to the old '500' series
desk telephone that contains just the component
you need. Pick one up at a flea market anywhere.
Remove cover. Keypad is attached to base via two
screws. Beware that the keypad does not include
the hybrid network for phone coupling. It is
located just under the keypad on the base.

1243. HELP WITH RF/COMPUTER NOISE ON HF

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-17 00:00:00 UTC
From: Snowdog <scottg@hsonline.net>
Message-ID: <01bc9252$d495ec60$1edc0ad0@scott>
Source record: 193331

I just purchased a new (to me) FT-101EE transceiver in perfect condition. I powered it up and tuned in some great signals far better than what I was receiving before on my Hmmerlund 129-X. When I moved the radio into the shack and fired it up again, I got nothing but noise. Tracking this to the computer in my shack, I found the only way to hear the signals is with the computer off!!! I need to run both at the same time in order to do the work I need to do. If anyone has any suggestions, PLEASE reply.

Thanks in advance.... Scott G., KB9JQG

I took a Amateur Basic License, Restricted Land, Marine + Aeronautical
Licenses without taking any courses. I will soon take Amateur
Advanced + 12 wpm, again without taking any courses. It's easy.

Ok I still have the following items for sale and will
now take bids. I will take bids for one week and
will sell to the high bider.

1- Palomar Antenna Tuner PT-2500 with built in noise bridge.
This is a 2kw tuner.

2- Icom IC-22S 2 meter mobil with diode matrix. Would make
a great second rig.

I do want to thank everyone that responded to the first
post. My garage is almost clean again...hi hi.

Tom, there is a Heath mailing list now. It runs on the tempe.gov
system. To sub, sent an email to listserv@listserv.tempe.gov, and write:

subscribe heath your name and you'll be hooked up.

Use the command:

signoff heath your name to unsub from the list.

To send a note to the entire list use the address: heath@listserv.tempt.gov

1260. Setting up the private phone access on ham band

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-17 00:00:00 UTC
From: bishwa@uwyo.edu
Message-ID: <1997Jul17.055419.26774@roper.uwyo.edu>
Source record: 193398

Hi all,
I know what I am thinking is illegal in the US and other coutries but
I can apply to other places where the ham bands are not allocated. I was just
wondering how much would it cost to set up the repeater. The area to be
covered has the radius of about 10 miles at most. The only problem is that it
would be the urban area with the average height of the building being 60 ft.
or so.
Would it be a prudent idea to use VHF or maybe the UHF would be
better? And how much powerful repeater would I need for such application. If
someone has repeater for sale (VHF) please let me know too.

Thanks in advance.

Bishwa Shrestha

I have a Kenwood TS-130s in excellent condition for sale.

It has the following features. WARC Bands. MIC processing, RIT, IF shift control, digital display as well as analog dial and noise blanker. It has a few other features as well. It comes with the microphone which also is in excellent shape and a heavy duty wiring harness. I have the original manual and packing material too if anyone wants to know.

As I said, this is in excellent condition with no scratches or mods. Anyone interested should email me at bluchunks@aol.com. $375.00. Thanks

Bob

Burt, this would not work, much like yourself this is his life, if anyone should understand this Burt it should be you. You and Jim both rely heavily on this group. As you stated, you've been at this for 9 years, much like Jim, this is your life.
You can not and will not stop simply because someone ignores you, you just recycle some of your older posts filled with slanderous remarks about hams and re-stir the pot.

> But hams being what they are there is always
> at least ONE person who will keep it going.

Yes of course Burt, and you count on this for your own Usenet existance. What a brilliant observation Burt, hmmm, if I make a post and call hams names they respond? WOW this is REALLY GREAT, I've really found something here... Should keep me busy for at least 9 years.

> If you want to argue with someone like him think
> of what it makes you.

Seems to me you have responded to anything Jimmy has posted, whats it make YOU Burt?
Ooops, sorry I forgot, your special Burt, not like the rest of us. When we respond were being typical hams, when you respond its for the good of the masses to educate us all. Sorry, I forgot.

> I am sure this message was a waste of time for
> some of you so post on.

Post on? You must be joking, your feeble existance relys on people responding to your silly ass posts and now you, the king of usenet bullshit, are preaching not to respond to Jim O Brien?

But Im sure it all makes perfect sense to you Burt, Im sure you see absolutly nothing wrong with what YOU do, the problem is others like Jim O Brien right?

Reduce your code-copying speed to that which you can copy by hand,
and increase from there. And of course, COPY BEHIND!!! Let the character
lay idle in your head for a small bit of time before writing it down,
and while you're writing that one down, the next one will then be
entering your head; you *must* divorce your ears from your hand and
have your hand remain at least one character behind what you're currently
hearing.

1271. Re: INDOOR ANTENNAS AND RF EXPOSURE

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-17 00:00:00 UTC
From: Lyle Koehler <k0lr@emily.net>
Message-ID: <33CE4068.1238@emily.net>
Source record: 193409

Regarding operation with an indoor antenna in a college dormitory:

For a discussion of the FCC's new RF-exposure regulations, see the article by Ed Hare on pages 47-49 of the January 1997 QST, and the ARRL's RF safety Web site at

http://www.arrl.org/news/rfsafety

For VHF operation in an uncontrolled environment, the maximum safe exposure is given as 0.2 mW per square cm (2 watts per square meter), corresponding to a field strength of 27.5 volts per meter. As far as the FCC rules are concerned, amateur stations with with less than 50 W PEP output, and mobile or portable stations with push-to-talk contol are considered safe without an evaluation. But to feel comfortable that you aren't frying yourself or your neighbors in the dormitory, you may want to do an evaluation of your proposed station anyway.

There are many possible pitfalls in using simple equations to determine RF exposure levels. However, you can get a rough idea of the power level at a given distance from the transmitting antenna from the equation

W = P/(4*PI * R^2)

where W is the power density in watts per square meter, P is the radiated power from the antenna (in the direction of interest), and R is the distance from the antenna in meters. Even a simple whip or J-pole antenna has "gain" over an isotropic radiator, so the transmitter power must be at least doubled to take this into account. For example, with a 25-watt transmitter and a 3 dBi antenna gain, the effective radiated power is 50 watts, and the power density at a distance of 2 meters is approximately 1 watt per square meter. Reflections and near-field effects can easily bring you to the 2 W/m^2 limit. One thing that helps is that the exposure can be averaged over a 30-minute period. Unless you are really long winded, you can probably assume a transmitter duty cycle of no more than 50 per cent in your calculations.

Hello and Thanks for your time.
I've been a Ham for a little over a year now and just Upgraded to General. Passed the 20 wpm too! I've been embarrased to ask this before but I don't have an Elmer and can't find the info anyplace. Here goes. Is it normal for 20 meters to be real noisey most of the time or am I doing something wrong? 40 and 80 are usually pretty quiet except for lightning crashes but 20 seems to always be noisey...real noisey. I am using a Swan Astro 102-BX and a G5RV up about 40 feet with an antenna tuner. I get about an S4-6 of noise. Would appreciate any offers of advice. Am I doing something wrong?
Thanks in advance.

DIVISIONAL NEWS

VK2 INDIVIDUAL AWARDS

At the council Meeting on Friday llth July 1997 the Nominations
submitted for the first VK2 Individual Award were discussed.

The theme was "For Services to Amateur Radio".

Council unanimously decided that the winner was
DAVID MARGERY VK2ICY

The nomination was submitted by Tamworh Radio Club.

Congratulations David.

CHANGES TO THE REGULATIONS EXAMS

The Australian Communications Authority (previously the Spectrum
Management Agency) has advised that the content of the "Licence
Conditions Determination for Amateur Operators (LCD) has been
released to the public by means of the Internet. It can be found at the
ACA web site, http://www.aca.gov.au/ Photocopies of this document are
available from the ACA offices.

As a result of this, the WIA Exam Service will start examining on the
matters contained in this document from 15th September (unless more
time is needed for the new questions to be approved).

Orders received prior to August 15th will be filled from the current
question bank. After 15th September, papers will contain questions on
the updated conditions, frequencies, power & permitted modes.
Further information will be available via Amateur Radio Magazine and all
Divisional Broadcasts as & when it becomes available.

EXAMINATIONS

The next examinations will be held at Amateur Radio House Parramatta on Sunday 3rd August 1997. This will be your last chance at the old price, as there has been an increase in the cost of exams. Also, this will be the last Regulations exam for a while. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm.

Please apply to the office for the necessary forms. Applications close on Thursday 24th July. Acceptance cannot be guaranteed for any applications received after that date.

--submitted by Eric Fossey VK2EFY - Divisional Secretary.

TRASH AND TREASURE SALE

The Trash and Treasure Sale will be held on 27th July at the Dural transmitter site in Quarry Road. The Institute will be clearing surplus stock - plenty of it - and welcomes others to set up tables and car-boot sale points.

Some of the items may interest ATVers - 4 commercial cameras (without lenses), control units and cables, There are also some 19 inch racking and other equipment.

It promises to be an interesting Trash and Treasure day, let's hope the weather is kind, but there will be some shelter if not.
See you at Dural after the morning broadcast on the 27th.

--Pat Leeper VK2JPA Councillor.

AFFILIATED CLUBS NEWS.

Attention All Affiliated Clubs & WIA Members!

Nominations have been called for the new quarterly VK2 Division Individual Award. The theme for this quarter's award is "For Literary Excellence". That is, the writing of articles for Amateur Radio Magazine, your Club's magazine, or any Electronics/Radio magazines.

Nominations should reach Amateur Radio House no later than 6th October giving particulars of what makes this particular WIA Member stand out, and should include samples of the Nominee's published articles. This will enable Council to make the correct choice at the October Council Meeting.

The value of the award is $40.00. Only WIA Members are eligible for nomination, and members of Council are excluded.

Affiliated Clubs Net

A reminder that the next Affiliated Clubs Net will be held on Sunday 3rd August at 09.00 hours.

--submitted by Ken Westerman VK2AGW, Affiliated Clubs Officer.

WICEN NEWS

The Central Coast AGM will be held on Saturday, at the Central Coast Rescue Squad Base, Rose St, Wyong, starting at 1pm; please note that this is a change from that previously advised.

The Hunter region will be providing safety communications for the "CanTeen Annual Troy Newman Cycle Trek" from Sydney to Newcastle next Sunday; the event co-ordinator is Pauline VK2GTB.

The Annual General Meeting will be on Saturday 9th August, at the Hornsby RSL Club, starting at 11am. It will be preceded by an RCOs' meeting, to appoint two Deputy State Coordinators. There will be a practical demonstration of the GRN system, and as an added inducement some door prizes will be given away, namely gift vouchers upon a well-known electronics retail chain and a year's membership of WICEN. Furthermore, Simon Trotter VK1AUS will be speaking on his experiences in RAYNET -- WICEN's equivalent in Great Britain -- and the ACT.

A major event next month is the annual City to Surf Fun Run, on 10th August, and your scribe as usual will be watching his family go past in the "back of the pack". Many operators are required, and further details will be provided in a later broadcast.

Central Coast WICEN would like to invite interested members to the Shahzada (pronounced sher-za-da) Horse Endurance Ride, over August 25-29th. The Shahzada is a 400km, 5 day horse endurance test conducted in the area around St Albans, north-west of Sydney. Central Coast WICEN has provided safety and ride management communications for this event for a number of years. The event requires WICEN members to be taken out of their comfort zone, working 14 hour days at a minimum, sleeping in tents, and providing for themselves with limited facilities. The climate is difficult and the terrain is not conducive
to easy radio communications. In other words, it sounds like fun.

To provide effective communications for this event, we require generally fit people, with a car, camping gear and radio equipment. We also require operators to be reliable, following specific instructions to the letter. Comprehensive briefing notes will be made available for those interested. If you are interested in attending this event, please contact Dave VK2UDT.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

DX REPORT

EASTERN MALAYSIA - The Special Event callsign 9M6HIL will be used from the Hillview Gardens Resort in Keningau, Sabah, on August 5 to 24.

Operators will include N2OO/9M6OO, N0RN, VS6KY/ZL1TX and a number of local 9M6s. The permanent callsign for the resort will be 9M6A.

TAIWAN - B0OM (!) will be active from July 24 to 31. They can be found on 160 to 2 meters, and will be active in the upcoming IOTA Contest.

SVALBARD - JW/DJ3KR may be active from here until 20 July.

SWEDEN - Special Event callsign 8S3JR will be used to celebrate the memory of King Chulalongkorn from Siam, now known as Thailand. He visited Bispgarden in Jemtland 100 years ago. This operation is in conjunction with the opening of a museum to commemorate the King's visit.

CENTRAL AFRICA - TL8BC is on air most days, and can be found between 14118 and 14132 khz around 1600 to 1700z.

CHAD - TT8LJP will be active using CW and SSB until October 15, 1997.

SAINT PAUL ISLAND - CY9SS will be active from July 23 to 31; They will operate primarily RTTY and 6 meters.

ST. HELENA ISLAND - ZD7BG is active using CW on 80 to 10 meters.

PIRATE OPERATION INFORMATION - The operation by 9K2ZZ on July 4 was by a Pirate. Do not send QSLs for this operation to 9K2ZZ's QSL Manager W8CNL.

--condensed from ARRL DX Bulletin 31, dated 17th July, 1997

AMATUER RADIO BALLOON EXPERIMENT

We've received the following letter from Tony Van Lysdonk VK5WC, who says:

I am in the process of organising a project which may be. of some interest to your group and would like their help.

The aim of the project is to promote Amatuer Radio by student involvement and to the public by media coverage.

The project will involve the launching of a weather balloon from GawlerHigh School. The payload will be the same as the one released 5 years. ago by the Shepparton Radio Club, with some improvements. The expected altitude should be approximately 60-80,000 ft. (18-24,000 m), and if it follows a similar flight, path it will land somewhere in an arc from
Hay (N.S.W.) to Ballarat (Vic.).

I am hoping to have a system of schools down range to forward the data coIIected back to us at the launch site. There will be a control station on

H.F. and it is hoped that some of the students will be operating to collect

data from those that log in. This is where your members could help me, if they could get in touch with their local school and see if they or their

students would like to get. involved in the project. lt can be at a primary

or high school level. They may be able to organise a project around it, be it weather or environmental, they will be most welcome to join in. We would also like to hear from any person who can forward information on to us, as we would appreciate all reports.

The launch date will be September 20th 1997, World Amatuer Radio Day (this is no coincidence).

All the equipment required to receive the information is a 2m receiver or scanner and for the best results a beam antenna, although a whip can be used.

The payload consists of a 140 mW. transmitter and a pc based module transmitting time, mission elapsed time, temperature, height, and so forth. This information will also be transmitted in data format but as of this time we have no details as to what you will require to decode this data. This and other information will be forthcoming via the Sunday morning b/cast. And I will communicate with the participants as the time gets closer.

There has also been a webb page set up and can be accesed via

http://dove.net.au/~gsawyer/balloon1.html

[or just got to the VK2 Divisional Web page - the link is in the "What's New" section] This will have the latest Information for those that have that facility.

This is a self funded project and with the help of Geoff VK3ZVW, flight package construction, Glen VK5ZCF, webb site coordinator, and is designed to promote the hobby of Amatuer Radio and for the enjoyment of amatuer operators throughout the receiving footprint area, however far and wide. I and my colleagues in this project hope that you can help us to make this project a success.

If the project is a success then we hope to have further launches with more ambitious payloads, more about this at a latter date.

-- Tony Van Lysdonk VK5WC

A REQUEST FOR HELP.

If anyone has an Instruction Manual for a Kenwood TS 700 A, please would you be prepared to lend it to the Divisional Office, where it will be

photocopied and returned within seven days. Both the Operating manual and the service manual are required, but either will do. If you can help, please ring Pixie at the Office so that arrangements can be made to get it from you

CLUB NEWS

CHIFLEY AMATEUR RADIO CLUB

The club is open every Saturday at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road
Plumpton.

Members guests and visitors are all welcome.

The club holds a 2 meter net on the club repeater VK2RCZ, On Friday
nigths at 8.00pm. All checkins are welcome.

The Frequency is 147.075 with a positive offset.

For more information ring (02) 9837 2226 or (02) 9834 1186.

Coming events.
26 July. At 1.30 pm.

A talk and a demonstration of some gear for FOX HUNTING, by Adrian VK2BFN.

--The Publicity officer Michael VK2EK

Orana Region Amateur Radio Club Meeting at 8pm in the Scout Hall Talbragar
St
Dubbo. Thursday 31 July

--Ken Westerman VK2AGW, VK2 Division Affiliated Clubs Officer

BLUE MOUNTAINS AMATEUR RADIO CLUB INC.

Just a short note this week to advise everyone of our special trash and
treasure on the 2nd of August 2pm at Springwood High School we will be
disposing of an entire station so there will be plenty of good stuff
available.

Our monthly meeting will be the night before at the same venue, this is
also a special general meeting so be there or be talked about.

Last week I mentioned the Blue Mountains intent to build a voice and
packet link accross the mountains, what I forgot to mention was if there
is anyone interested in helping with this project could you please
contact our Repeater Manager Dave Pike VK2-DPA.
or our newly appointed Packet Manager Dave Barry VK2-IH.

--Submitted by Adrian VK2-BFN

SUNDAY, 3RD. AUGUST, IS THE DATE FOR OUR ANNUAL RADIO
HAMFEST. 9 AM. AT THE CLUB ROOMS, 412 RICHMOND HILL ROAD,
GOONELLABAH. PLENTY OF PRE-LOVED GOODIES, ELECTRONICS,
AND COMPUTERS, PLUS COMMERCIAL STANDS.

REFRESHMENTS, B.B.Q., COMPETITIONS. RADIO FOX-HUNT??
ADMISSION $2. BRING THE FAMILY. EYE-BALL YOUR OLD MATES..
MORE INFORMATION FROM BERT, VK2HIV, ON 066-243239, GRAEME,
VK2GJ, 066-851336, OR ON OUR INTERNET , SARC@NOR.COM.AU
THE CLUB'S PHONE NUMBER IS 066-247247 AND OUR POSTAL

ADDRESS IS P.O. BOX 524, LISMORE NSW 2480.

--VK2GJ GRAEME...PUBLICITY OFFICER.

THE HORNSBY & DISTRICT ARC.

Our formal monthly meeting is next Tuesday, July the 22 nd. 1997. at 8:00 pm. in the Mount Collah Community Centre, Pierre Close, Mount Colah. (near the eastern entrance to the railway station). Our guest speaker will be David VK2NH a councillor of the VK2 Division of the WIA.

David will enlighten the meeting, as to what the VK2 Division is doing at present, and what it intends to do in the future. In my opinon, this has all
the ingredience of an interesting talk. Visitors will be most welcome.

The next training classes, after the present class have their exams in September, will commence early in 1998. However feel free to phone Tony VK2BTL on 9487 3383 or John VK2WRT on 9807 2490 regarding the future classes.

The Club Net every Monday night at 8:00 pm. on VK2RNS. frequency is 147.250 with a positive offset. Feel free to join in, if you are a listener set
your reciever to 147.250. We would like to hear from you, or better still we would like to meet you at one of our meetings, you will be made quite welcome.

If you would like more information about the Club, write to HADARC., Post Office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 2490.

--Submitted by. John. W. Turner VK2WRT Publicity Officer

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION.

To all Amateur Radio Operators, especially those who use Packet Radio as their medium of communication, the Rose Network now alows connections, with other stations around the world. Through VK2RNS, which is linked VK2SUT, the Linux Node gateway. The Linux software, performs and functions as a Rose node, it also supports Net/Rom, and acts as TCP/IP switch.

For more information, regarding the ROSE network or AAPRA, write to 59 Westbrook Avenue, Wahroonga, 2076. Once more, 59 Westbrook Avenue, Wahroonga, 2076.

--Submitted By John, VK2WRT, Publicity Officer.

FISHER'S GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every Wednesday Evening from 7:00 pm at the Campbelltown High School, Chamberlain St Campbelltown

Also every Third Tuesday of the Month from 7:30 pm, at the Campbelltown High School, is the General Meeting night with lectures on popular subjects.

In addition to our Packet PMS VK2FFG on 144.925, Terry, VK2TLU is running a BBS on 145.100 that is proving popular around the area. Last week's lecture was VK2TDS's Introduction of the Club's Web Page and a discussion on Amateur Position Reporting System (APRS). Daryl has put a lot of work into the Page and it should benifit the Club and Amateur Radio in general. The lnternet address will be published when it is available.

The next lecture is on the 19 th of August and is about High Speed Packet.

October 21 at is "Oktoberfest". This means bring along your favourite Homebrew Project and have them admired by one and all. Remember the only bottles you bring should have little lights inside them. Don't forget JOTA in October also.

The proposed lecture agenda is.

August 19: High Speed Packet
September 16: Fox Hunt Information Night presented by Blue Mountains ARC
October 21: Home Brew Competition (Oktoberfest!)

--Publicity Officer Chris VK2ZCJ Ph.: (046) 81 9365 (Home)

BROADCAST ROSTER

Next Sunday, 27th July 1997

Morning:
Announcer: David VK2NH
Engineer: Eric VK2KUR

Evening:
Announcer: John VK2FRJ
Engineer: Peter VK2EMU

If you would like to submit a news item for inclusion in the VK2 Divisional

broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to wiansw@sydney.dialix.oz.au

The deadline for submissions is 2pm on the Friday preceding the broadcast; if
sending by packet or Internet, please allow for forwarding delays in the network.
If sending printed copy, please double space your text, leave wide margins, and
use a plain font such as Arial or Helvetica for clarity.

Please proofread your text, check your grammar and punctuation, avoid using

shorthand and abbreviations, and use the exact words you wish the announcer to
say on air. Remember, the more care you take in preparing your news item, the
better the announcer will read it.

There are two relatively easy to this common problem.

1) Get a copy of the ARRL's "Tune In The World" and go to Figure 3.3 for the time-tried "two-stroke" printing technique. Now, change all your writing to printing the "two-stroke". After you print without thinking, you will also copy without "translating". Neat, huh!

2) If the above doesn't work, use a typewriter. This also takes a little coordination, but is quickly a mindless activity. Don't try to copy characters one for one, but type in bursts that at that moment make sense to you. Soon you won't need the typewriter. A warning note here though: You need to schedule a seperate code exam (the other guys can't concentrate with all that clacking). I've never met an examiner (even before VE's who refused this common request. Just don't spring it on him/her at the last minute. Also bring your own machine and blank paper.

Go for it with either method!

SB SPCL ARL ARLX018
ARLX018 Hurricane Danny Update

Hurricane Danny is expected to be a low key, mostly rain event.
Coastal flooding and some inland flooding due to heavy rains are
expected over the next few days as the storm is a slow mover. The
Hurricane Net was activated Friday morning as the band opened and
remains in operation with very light traffic until Danny drops it's
hurricane status (projected to be sometime Friday night).

Hello,

I have a Marage 10 in 150 out 2m amp. "g150"?
Has fm/ssb switch.

Want to trade for a 6m sb200 or another 6m amp...
I'll take a sb-200 that needs to be modified.

Let me know what you got.
Thanks.

Well, if the antenna were professionally designed, you would certainly care
to specify the gain a little closer. If it were anywhere near the quoted
figure, many EME-ers would immedially throw away their arrays.

In fact, there is no reason to believe that the gain exceeds that of a
typical 20 ft yagi, at about 13 dBd, the plans for which are *free*.

1295. New book--FCC vs. freedom of the airwaves

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-18 00:00:00 UTC
From: EGLX34A@prodigy.com
Message-ID: <5qo2v6$1g7u$1@newsxfs02-int.news.prodigy.com>
Source record: 193360

NEW BOOK ANNOUNCEMENT

Access to the Airwaves: My Fight For Free Radio
By Allan H. Weiner (As told to Anita Louise McCormick)

Allan H. Weiner has always believed that the airwaves are free, and that they rightfully belong to the people. Ever since his childhood, this gifted radio enthusiast has devoted his time and energy to the development of free radio broadcasting. In addition to his "pirate" radio projects, Weiner has engineered, worked for, and owned a number of licensed radio and TV broadcast stations.

The film "Pump Up The Volume" appeared to be loosely based on Weiner's teenage pirate radio adventures, but failed to capture even a fraction of the dedication and the intensity that this heroic free speech advocate has brought to his endeavors throughout his life.

The trials and tribulations that Weiner endured to bring Radio New York International to the air are legendary. The FCC's illegal seizure of Weiner's radio ship the M/V Sarah in 1987, which he designed and built to broadcast from the international waters off the coast of New York, made headlines around the world.

Weiner's story is both a heart-warming tale of an electronics genius at work and a chilling indictment of government disregard for personal liberties and free speech.

But despite the FCC's efforts to silence him, Weiner has persevered. And he continues to work towards a future when the airwaves are open to all who choose to use them and the world becomes a better place because of the free transmission of knowledge.

Access to the Airwaves: My Fight For Free Radio, Weiner's autobiographical account (as told to writer Anita Louise McCormick), is a powerful rendition that should be read by all who believe that speech should be unfettered, and that fighting the powers-that-be is an often unheralded necessity.

Access to the Airwaves: My Fight For Free Radio is now available from Loompanics Unlimited for $17.95 plus $4.95 S&H U.S. (Ph. USA 1-800-380-2230, international 1-360-385-7471, World-Wide Web http://www.loompanics.com. Also available at www.amazon.com)

1298. VE7TCP DX Reflector Funds Drive

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-18 00:00:00 UTC
From: VLBK93A@prodigy.com
Message-ID: <5qoj2n$1lbm$1@newsxfs02-int.news.prodigy.com>
Source record: 193363

Please direct any questions about the funding drive to:

<funding@ve7tcp.ampr.org>

VE7TCP.AMPR.ORG
1997 Funding Drive

<lyndon@ve7tcp.ampr.org>

Some (Ancient) History

This message is being sent to all subscribers to mail-
ing lists hosted on the ve7tcp.ampr.org server. Copies will be
placed in the root directory of the anonymous FTP area, and on the
web server.

The ve7tcp.ampr.org internet server has been a back room
project of mine (literally) since 1994. It's con-ception can be
traced back to the formation of the Internet DX mailing list
in 1993. The DX list was a spin-off from the very successful CQ-
CONTEST mailing list started by Trey Garlough. The DX list
was ini-tially hosted on a system at the University of Northern
British Columbia, but as time went by the administra-tive load
involved with running the list required it to be moved to a
dedicated server where I had the flexi-bility to install software
necessary to manage the list in a more reasonable (on my time)
manner.

Once the machine was in place, setting up a web site dedicated to
ham radio was a natural extension, and in early 1994
ve7tcp.ampr.org made it's debut as one of the first web/mail
servers on the internet dedicated exclusively to amateur
radio. (As near as I can recall, it was the first, and I
would be interested in corresponding with anyone who can provide
information on other servers that were set up in that
timeframe. There's some history there that should not be lost.)
The initial focus of the server was on contesting and
DX (my two favourite aspects of ham radio, in that
order :-) although it soon grew to encompass other aspects
of the hobby. It was (and has) always been my intention to make
this place a home for useful informa-tion, and not just a site
containing links to other sites ...

From it's birth I have funded the server out-of-pocket. This
worked well until early 1996, by when the load on the server
overwhelmed not only the hardware running it, but also it's
internet connection. That spring I was uncertain what to do about

the situation. I didn't want to turn the operation into a commercial business, but at the same time I didn't want to shut it down. After a bit of soul searching, and a lot of poking from the system users, I decided to undertake a funding drive to get the system upgraded to the point where it could handle the increasing load. The positive response from this was stunning to say the least, and allowed me
to make the upgrades necessary to keep things running smoothly (for the most part) and to expand the service offerings.

Since then, the demand on services has maintained a steady growth, and the hardware has continued to age. We're now at the point where critical components are starting to fail, and doing so with all too much frequency. So once again we are at a point where the sys-tem needs an upgrade if it's to continue doing the job.

What Have You Done For Me Lately?

From it's beginnings as a server for a single mailing list, ve7tcp.ampr.org has grown to offer a wide variety of services to the ham community. Some of these are rather mainstream (the mailing lists, FTP archives, etc) and some are unparalleled anywhere (the Heard Is. log servers). A quick summary of these includes:

Mailing Lists

* The Internet DX Mailing List

* The Heard Is. Expedition Mailing List

* WF1B-RTTY

* CT-USER

* LOGPLUS

* NA-USER

As well it acts as an FTP distribution site for files and software related to CT, DXBASE, Logplus, Logwin-dows, and NA, and mirrors the FTP archives at the ARRL and oak.oakland.edu.

During the Easter Island (XR0Y) DXpedition it provided the first internet-based online search engine allowing hams to query the DXpedition log files to ensure the information about their QSO(s) had been logged cor-rectly. During this years DXpedition to Heard Island (VK0IR) it served up an e-mail log search engine (another first) in addition to providing web-based log search capabilities. And as we've gained experience establishing these services, the software has been made available to the amateur community for use in future expeditions -- a tradition I intend to carry on.

Both the web engine and the FTP archives offer up archives of several DX bulletins (through the efforts of some very dedicated volunteers), and these archives are indexed and available for search via a WAIS server running on the machine. More recently, a WHOIS based Canadian callsign server was added, and I expect to have the US callbook incorporated into that shortly. NNTP feeds of rec.radio.amateur.*, alt.ham-radio.*, and the ampr.* newsgroups are also available.

So What's Next?

Good question. I wish I had a simple answer. There are some immediate goals I would like to achieve:

* Redo all the mailing list archives using Glimpse as the indexing and search engine.

* Provide a single consistent front-end -- both web and email -- for DXpedition log searches, ala what we did for VK0IR.

* Write (yes, write) a replacement for the mailing list server we currently run.

* Replace the existing server hardware with bits that have been manufactured within the last five years, and get some filesystem backups happening.

I also have some longer term goals that involve providing web accessible tools for things like antenna design, propagation analysis, and general electronic design, that are not available to people running low-end computer systems. From an operating standpoint it would be nice to provide an archive for expedition and contest log information in a format suitable for con-ducting propagation analysis, and I would *love* to see a truly interactive QSL database engine that could not only be queried, but *updated* by the users.

What Needs To Be Done?

The most immediate need is to replace/upgrade the existing server hardware. As much as I hate to say it (and believe me, I *hate* asking for money like this), it's going to take $$$ to do this. Details of the his-tory of the server hardware are available on the web page so I won't repeat them here. As it stands right now, the system is running on a 100 MHz Pentium with 128 MB of RAM and roughly 8 GB of disk. A year ago it was an 80486 with 16 MB and about 2GB of disk.

The load imposed by running the mailing lists has always been the limiting factor. Last years upgrades kept the status quo mailing lists quite happy, but the appearance of the Heard Is. list required a RAM upgrade to 32 MB. Since them we've gone to

64, then 128 MB of RAM. Disks have also had to be replaced, mostly due to the old ones failing from old age. A related problem has been heat. The server has enough hardware in it that the fan just can't push the air through it fast enough any more. (I attribute two of the recent disk failures to excess heat.)

As I see it, here's what we need to do to keep the server going:

* Replace the existing cabinet with commercial grade rackmount chassis -- two of them: one for the CPU board and base peripherals, and a second for the SCSI expansion bay.

* Install a tape drive for backups.

* Purchase tapes for the tape drive.

* Replace/upgrade most of the disk farm with current hardware. This includes adding a sec-ond SCSI controller so that I can start interleaving the disk I/O across more than one channel.

* Expand the disk farm to properly accommodate the FTP, mailing list, and expedition log archives.

Beyond this it would be nice to be able to add one or two (or more) SCSI CD-ROM drives in order to be able to offer up some of the public domain amateur radio related CD's via the FTP archives.

How Can I Help?

Over the short term it's quite simple: cash is required to upgrade the hardware. But there is more to it than that. Just having the hardware means nothing unless there are people willing to use it to provide tools and services useful to the amateur community. Running a mailing list is not a simple exercise. The people work-ing behind the scenes put in a lot of hours to see that you get that information in your mailbox. Similarly, maintaining the web site, the FTP archives, the mailing list indices, etc., requires time that we could all be spending on the air. Keeping this going requires a com-munity effort, and it's you the community that must contribute to reducing the information vacuum. First and foremost this site requires VOLUNTEERS to help maintain the services running here. Regardless of your level of computer skills, please consider providing some of your time to help this continue to be a useful site. Just like contesting and DXing, you will learn more by looking over the shoulder of an experienced op than otherwise, and we're more than willing to share our knowledge.

But naturally the other half involves finding the $$$ to fix
the hardware problems we have. I've run up a quick budget showing
where we need to get to:

```
+-----------------------------------------------------+
| Tape drive (DDS-2 Sony DAT 8GB) $1000 |
| DAT tapes for above 110 |
| 4GB SCSI disk 1050 * |
| 4GB SCSI disk 1050 |
| 96 MB RAM 1200 * |
| SCSI Controller 100 |
| SCSI CD-ROM 200 |
| Rackmount Chassis (CPU) 1300 |
| Rackmount Chassis (SCSI) 800 |
+-----------------------------------------------------+
| Sub-total (CDN $) $5810 |
| GST(**) 407 |
+-----------------------------------------------------+
| Total $6217 |
+-----------------------------------------------------+
```

* These represents bits that I have already pur-
chased this year to keep the box running.

** GST is the Canadian "Grab and Steal Tax" -- an
excuse for the government to take an additional 7%
of my livelihood.

The costs I've listed represent my "dealer cost" buying
price. Some of you might be able to get the gear
cheaper, however I insist on purchasing the equipment myself
from vendors I know. It's not worth saving $10
to get something that doesn't work, and UNIX servers are a lot
more picky about what they will or will not work with. (But if
you have pointers to quality hard-ware that I should consider
purchasing, please send the information along.)

How Can I Contribute?

As mentioned above, there are two things required to keep this
service going: volunteers, and money for the hardware.

Anyone wishing to volunteer their time and knowledge, or who has
ideas on how the services here could be expanded to assist the
amateur community should contact me via e-mail at:

<lyndon@ve7tcp.ampr.org>

I discovered last year that collecting donations was almost as
much work as running the server :-(I'm very fortunate this year
in having a volunteer who will be coordinating the collection of
donations on my behalf, freeing up my time to concentrate on
upgrading the server. Those wishing to make cash contributions
to the server upgrade fund can send them to:

Robert Reed (W2CE)
1991 Route 37 West
Lot 109 - Pine Acres Manor II
Toms River, New Jersey
USA 08757

Cheques and money orders are fine -- cash is not.
Please make things out in Robert's name as he will be
depositing the money and forwarding it to me sepa-
rately.

NOTE:

To those of you in Edmonton, I can collect this
money directly. You can reach me via e-mail or at
424-4922 x339 during the day.

Last year I promised to have a web page set up to list those of
you who contributed to keeping the system going. The
workload of keeping up with the donations precluded that, but I'm
hoping that someone with some basic HTML skills will step
forward this year and vol-unteer to maintain that information.

I Would Like To Thank The Academy ...

Jim Reisert (AD1C) deserves a *lot* of thanks for act-ing as the
other system administrator for this system. He spends *way* too
much time watching all the mailing lists, and the machine in
general, in between his duties watching out for contesting.com.
(And we even let him off for a bit to get married :-)

Bob Reed (W2CE) also deserves a large *thank you* for handling
this years fund raising drive. (He doesn't know what he got
himself into :-)

And all the people who keep the bulletin and mailing list
archives up-to-date also deserve your thanks. The system would not
be what it is without them!

Has anyone ever used or heard of anyone using a parabolic antenna (Satellite Dish Antenna) for working any of the AMSAT birds? Seems like the gain would be nice but are there any problems with polarization and how about the mesh width? - i.e. would a plain old 10' C-Band TVRO dish work for xmit? or would the signals pass right through it?

Thanks In Advance -

Chris Rutledge

From: thompson@mindspring.com
Message-ID: <5qmquv$uu9@camel12.mindspring.com>
Source record: 193426

The SouthEast DX Club maintains a "DX Alert" on 147.51 simplex that reads packet spots. The past two days I notice a "carrier" that is sitting near this frequency that is very similiar to the one that sat on 145.51 several years ago. Turns out this was cable channel 18 (TMC). 2 meters blew TMC out for several miles in all directions until the cable company fixed the leak.

I tuned arounds and the carrier is loudest on 147.505 but can be heard on 147.495, 500, 510, and 515. Its gone at 147.490 and 147.52. ON 505 I think I hear faint talk.

Is there a cable channel near 147.505? I don't get either channel 18 or 19 (the new cable boxes put a modulated block on them) and I don't interfere with either (I run a brick that blew holes in channel 18 before....)

I need to find out if this is a possible cable problem before I call them to check it out. We hams used to check them out by listening to the birdie on 107.9FM but they got tired of us and went to another method of tracing leaks.

I've heard of those that only copy every other letter/number but that
sounds tougher than just putting in a lot of good ol' fasioned work.
You'll find that as you get better at cw, you'll hear less of the
unimportant stuff and concentrait on the facts, just the facts. Also,
you'll start hearing words instead of letters. It sounds to me that you
are still on the first level, when you hear ".-." do you hear the dits
and dahs or do you hear an "r". hope this helps...73 ki8ag Al

Depending on the frequency, a TVRO dish could work well for you, the mesh is designed to work at frequencies of up to 4 Ghz. As for gain, at 432 mhz, a perfect 12 foot dish has a gain of about 22 dB over an isotropic radiator, according to charts in the ARRL Antenna Book. A 10 foot dish has a potential gain at 432 Mhz of about 20 dB, i figure by interpeting the charts. At higher freqencies, the potential gain is even higher.
At 1296 Mhz, that same 10 foot dish has a potential dBi of about 26 dB, and in fact people have used 10 foot dishes for EME work at these frequencies.
At lower frequencies than 432 Mhz, a dish becomes impractical. A 10 foot dish at 144 Mhz has a dBi of only 8 or 10 dB, a figure I can equal with a homemade 4 element Quad.

The ARRL antenna book also has ideas for building feedhorns for dishes, and other ideas. Good luck and 73

Source record: 193432

I just bought a Cushcraft AR-270B dual band Ringo antenna. I have
been told different ways to install it.

1. Run a ground from base of antenna mast and use lighting
discharge on coax cable.

2. Just gound antenna base.

3. Just use lighting discharge on coax cable.

4. Use no ground but put a loop in coax at the antenna.

One theory is to ground everthing another is not to attract the
lighting?

Good luck... If my memory serves me right, there have been only 5
stations to work WAS on 2 meters without the use of EME or Sat. And
they are all located in the middle of the country.. Check out the
write up and map in QST two or three months ago.
I hope U can do it!!

Norm asked:

> Hello. I am looking for a frequency list of repeaters of the North
> America region...any suggestions.....web site? books?..

Get a copy of ARRL Repeater Directory. Its a pocket-sized
book which lists them by locality and frequency.

Also ARRL has a new software package which will give you a
customized printout based on a travel route which you specify.
Point your browser to "http://www.arrl.org/catalog/travelplus/"
for a description.

1324. ARLP029 Propagation de K7VVV

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-18 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlp029.1997@arrl.org>
Source record: 193437
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB PROP @ ARL $ARLP029
ARLP029 Propagation de K7VVV

ZCZC AP29
QST de W1AW
Propagation Forecast Bulletin 29 ARLP029
From Tad Cook, K7VVV
Seattle, WA July 18, 1997
To all radio amateurs

SB PROP ARL ARLP029
ARLP029 Propagation de K7VVV

Conditions are still poor because of low solar activity. While HF radio enthusiasts can be pleased by the continued stable geomagnetic conditions, any new solar cycle still seems to be stalled. No change is forecast for the next few weeks.

The average solar flux for the previous ninety days has dropped another point this week to 72. This is the second time in July that the ninety day flux average has dropped, and the flux values on each day last week were well below that number.

K8MLV wrote to point out that in propagation bulletin ARLP028 there were a couple of flux values which seemed to vary from the values broadcast by WWV. The solar flux values in this bulletin are from the observatory in Penticton, BC, and another check with the numbers from the observatory agree with the values in ARLP028.

K8MLV also mentioned that the flux value for Saturday, July 12 was the lowest since last October 12, and that CO2KK in Radio Havana Cuba recently speculated on the possibility of a second solar activity minimum before solar cycle 23 takes off.

Jan Alvestad wrote from Norway to tell us about a nice web site he built at http://www.dxlc.com/solar/ which is devoted to sunspots and solar activity. Check it out.

W4AR wrote from Florida to say that during last weekend's VHF contest there was little or no 6 meter activity, which he believes is connected to the low solar activity. N3EG wrote from Washington state to note that there were no sporadic E signals at his QTH during the same contest, just a few meteor bursts.

Sunspot Numbers for July 10 through 16 were 17, 0, 0, 0, 11, 0 and 0 with a mean of 4. 10.7 cm flux was 68.5, 68.6, 67.4, 67.1, 68.1,

69.2 and 69.6, with a mean of 68.4, and estimated planetary A
indices were 8, 4, 4, 4, 3, 14, and 5, with a mean of 6.

>be nice but are there any problems with polarization and how about the mesh
>width? - i.e. would a plain old 10' C-Band TVRO dish work for xmit? or would
>the signals pass right through it?

Hi Chris

Follow some of the links from my web site you will find plenty of info
on parabolics.

The problem with a big dish will be:

1> surface accuracy at required freq. No lumps can be bigger than 1/3
wavelength or you get squints

2> solid or mesh? If mesh the holes cant be bigger than 1/10 wavelength
wide or you get losses

3> pointing accuracy required. A big dish might need a pointing accuracy
of 3 degrees. Pretty hard!

I would go for a smaller dish, say 1M - perfect gain for higher bands,
reasonable pointing accuracy and easy to control.

Polarisation, depends on what satellite, but normally circular - simple
helix feed at the dish focus for 2.3/3.4 and a horn with phasing adapter
for 5.7 and 10 ghz.

I think you must be gearing up for 3D.

Let me know more, I maybe able to help.

How many of you would pay $30 (postage included) for the plans to build
a PROFESSIONALLY designed 12 Element 2 Meter log-spaced quad, a little
under 20 feet long and build on a sturdy aluminum boom, with 17-21 dB of
average forward gain, giving you an effective radiated power of about
200 forward Watts RMS for every 10 Watts RMS of input to the antenna?

If yes, please go only once to this URL:

http://www.caprica.com/~jd/yes4quad.html

If no, please go only once to this URL.

http://www.caprica.com/~jd/no4quad.html

Hi all,

My homepage is getting bigger and will continue to do so until Telenordia tell me I have run out of disk space on the server. Since the last list I have almost finished my General Coverage receiver, and it works a treat. I have added a 10 (15) watt HF linear amplifier, complete with the PCB foil (uses the cheap CB type PA transistors).

I have even included a couple of pages about 'estimating' size of heatsinks. Visut my page at:

http://user.tninet.se/~acz732k/

Amongst my constructional projects are:

BASIC INFO FOR BEGINNERS
How to solder
Component identification
tools
How to calculate heatsinks

ANTENNAS
Remote tuning of tuneable antennas
Basic dipole information
Short antennas for the HF bands
A balcony/terrace antenna (worked JA on it)
Packing crate antenna
Frame antenna

RECEIVERS
General coverage HF receiver
Cigar box HF receiver - uses battery valves
IC HF receiver
HF direct conversion receiver
Regenerative HF receiver
HF and VHF receiver using ZN414 (ZN416)
Modifying domestic receivers for HF SSB
Modifying domestic receiver for 160 meters
Synthesized receiver

TRANSMITTERS
FM (88+108MHz) 'BUG' (can be modified for 30 MHz)
250mW HF bands CW TX
4 watt PS for the above

5 watt CW TX - dead easy to build
CW TX using voltage regulator
Single valve TX
Two valve TX
Cigar box transmitter (valve)
145MHz FM TX
QRP SSB TX
3 watt linear 1 - 30 MHz
Phasing method SSB exciter
500 watt linear amplifier
April 1st transmitter
10 watt linear amplifier (30dB gain)

USEFUL
VHF NBFM Crystal RX based on a coffee tin
250vDC for valves using modern components
Stereo enhancement for HF CW
CW filters
Self tuning CW filter
Q-multiplier
CW keyer using 'relay logic'

DATA/INFORMATION
QRP frequencies
Measuring micropowers
Making PCBs, several methods
G0TLAs QRP circuit database on packet
Coil winding and 'turns' calculation.

DOWNLOADING
Signal generator program
All my QRP@WW circuits in a ZIP file
PCB foil for BUG TX (later version)
'Adult' screen saver

BREWING BOOZE
Brewing beer, wine and 'mash'
Distilling the mash (3 methods)
Making liquours

---------- and more ----------

I will be adding more to the homepage constantly, as long as
I have the time available to do it.

Have fun with QRP (and QRO) de Harry, SM0VPO, Upplands V&#65533;sby.

Oh Drew, don't be so melodramatic. Ten minutes in the morning and ten
minutes in the evening for a few weeks is not an "enormous waste of
time." Heck, you could practice during the daily freeway commute and
evening TV commercials. Antiquated? More folks are using code than
the digital modes on HF. Never use? At least they will have joined the
world's HF community in having a common mode that they can use if necessary.

You might actually believe the FCC does nothing, but you'd better believe
that his income tax returns are gone over thoroughly for any hint of im-
propriety. The Feds have other ways of "getting even" without even having
to lift a finger.

Gee Roy, given your past borderline behavior, do use care when you fill
out those tax forms...

True, the Kenwood does have more bells and whistles but here are the
comments from 5 owners in this area. Terrible intermod problem. At least
as bad as the TM 733 which was almost unuseable in city areas. Even bad
outside the city where there are pagers. Outdated circuitry here with no
improvement Can hardly see the numbers and other display and it isn't even
very bright outside. Pretty blue but surely not very readable during the
daytime. I love the lotsa memories but my gosh it makes a career out of
scanning through them. Scan rate must be 4 or 5 channels per sec. My ten
year old scanner is 5 times as fast as this. Three of the 5 hams are trying
to sell theirs and they are not moving at an asking price of $400 to $425.
There is a way to adjust for the intermod but it's through attnuation
(Icom does this too) and it works to a degree but your middle strength
repeaters go to S1 or 2 and your weak stations disappear completely. Even
if you install a good intermod filter like the DCI, you still have the
disasterously slow scan rate
The Yaesu FT8000 and FT8100 are the first mobiles to incorporate intermod
protection built into the IF stage and while it's not perfecft, it is way
above everyone else. Driving through downtown Mpls - St. Paul, there was
only 2 areas where intermod started to break through and then cut out. The
Kenwood could not even be used in the cityies. The display is easier to
read than any other unit that I have had. The scan rate is great 26
channels per sec. approx. All 54 channels scanned on the FT8000 in less
than 3 secs. Don't know where the repeaters or police action is? Put the
unit in search scan. It stops on a station and automatically puts it in a
special ghost memory which you can check later and leave there or put in
your regular memory bank. The 10 hams I know and myself who have 8000's or
8100's are all pleased with the performance and 2 have bought second ones
compared to the 5 hams with the Kenwoods who are all unhappy with 3 trying
to dump theirs
The FT8000 has been discontunued because it is too easy to open up the 800
cellular but there are still some available.
Just a final note, I wouldn't trade any of my Kenwood HF gear for any
other brand.
Hope this helps a little,
73 es gud dx,
Bert K0BTF

Source record: 193258

"unsafe to operate a handheld indoors." ?? Now, that's a new one on me. I have been operating handhelds indoors, outside, upside down, and backwards since there were handhelds and as yet I have detected no indications that I am sterile, developing cancer, or gone any crazier than anyone else. Horse do-do.

Also, I have operated HF at power levels of 100 watts using indoor antennas with no ill effects on me, wife, children, cats, or African violets.

I recommend starting with a good, solid handheld. The old Yaesu FT-470 is a good dual bander and, because it is a bit older, you can pick them up cheap. My vote for the best newer handheld is the FT-51, a dual-band Yaesu. I recommend dual-banders because they don't cost that much more and have a lot more flexibility. I recommend starting with a handheld because you can use it as a handheld, get a mag mount mobile antenna and a DC power cord to run it off the cigarette lighter and use it mobile with good resutls, and you can still use it indoors. If you get a handheld, cough up the extra bucks and get a drop-in charger, a high-capacity battery, and a battery case that will take AA batteries.

HItting a repeater fiftenn miles away from inside will be tough, even with the 25 - 45 watts you could get out of a mobile. From the dorm room, try to get some sort of antenna outside. There are clip-on antennas that are meant to slip over a car window; they have a BNC mount where you take the antenna off the handheld, put it on the mount, and put the thing up outside. Be inventive: make a dipole by using RG-58 coax stripped for 19 inches, using the inner condutor as one half of teh antenna and the braid as the other, attache one end to a wooden dowel and hang it out the window; or, tape it to the window on the inside of the glass.

A mobile rig requires a power supply and all sorts of extra cords, cables, etc. Handhelds can also operate packet.

Hi

I've written two simple tclets for hams and swls. One is a poor
man's Geoclock in the Net and the other calculates MUF values
for given month and sunspot number. You can find them from url:
http://www.sci.fi/~mjkoskin

To use them, you need tcl-plugin from Sun. On my homepage there is
a link to get the plugin.

Try them out, won't cost a penny (as the opposite for modern trend in
the Net)

Hello,

A week or two ago someone posted about common problems with a Radio Shack HTX-202 and I think one of the problems had to do with the speaker. If you have the post or know where I can get it, I would appreciate a reply.
I have audio but it is VERY low. Even if I plug a speaker mike into the plugs on top, it's a little louder but you have to hold it up to your ear to hear it. Everything else seems to work.
Any help would be appreciated.

Source record: 193375

The next MADRA test session will be held at SweatFest 97 on Sunday July 20.

Applicants should arrive to the main building at the hamfest site at 9:30 AM

This is an ARRL VEC session and preregistration is requested. Send your e-mail to "veteam@aol.com" or call our voice bbs 301-416-8447. We need your name and the elements that you want to take.

If you would like info on the hamfest including directons, contact our club site, "www.qsl.net/madra" and click on the SweatFest 97 link. Our old site is still in operation and good as well.

Fees for the exam is $6.25 for all elements except element 1A and element 2.

Hamfest admission is $5

Bring two forms of ID and copies and originals of your current CSCE and license if any.

There is a new law in in Congress that DIRECTLY affects the radio hobby.
Edward Markey (D-MA) has introduced bill H.R. 1964 that will stop new
radios
from picking up a whole bunch of VHF and UHF frequencies. This stupidity
must be stopped or I bet all scanners will be banned in the near future.
Where
these idiots get off telling us that there are frequencies that should be
forbidden
is beyond me. Shows what the power of money can do.
The last time a bill came along like this cellular frequencies got banned.
This
time we have the power of the Net to spread the word. Please let others
know
about this bad law. Also write now to your Congressman and let them know
what
you think of this.

++

Date: Fri, 11 Jul 1997 11:33:34 -0400

From: Larry Van Horn <steditor@grove.net>

Subject: Legislative Alert: Scanners Under Attack HR 1964

First I would like to thank my old friend Larry Miller of Monitoring
Times and National Scanning Report for the heads up on this bill that
is moving
through Congress.

I have some bad news that DIRECTLY effects the radio hobby
above 30 MHz. I'm not going to wait on the presses here at Grove to
roll
because this legislation needs to be stopped now before it gets out
of
committee. Should it pass, this bill will end the scanner hobby as we
know it.

Another assault on the scanning hobby has begun by Congress and our dear, dear friend the honorable Edward Markey (D-MA). Markey has introduced H.R.

1964. This bill in section 104 makes major changes to Section 302 (d) of the
Communications Act of 1934 (47 U.S.C. 302(d)). Most of you who are students of the cellular telephone frequency wars should remember this section. If not, let me refresh your memory. This is the section of US Code that prohibits the manufacture of any scanner capable of receiving the cellular telephone bands.

Well Markey has taken this to a new level with H.R. 1964. If passed the new
language would now read:
(a) The Commission shall prescribe and make effective regulations denying
equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that
is capable of:

(1) receiving transmissions in the frequencies allocated to a commercial mobile radio service (as such term is defined in section 332(d));

(2) readily being altered by the user to receive transmissions in such frequencies, or

(3) being equipped with decoders that convert digital commercial mobile transmissions to analog voice audio.

(b) Effective Date of Prohibitions on Regulation Amendments -- The prohibitions contained in section 302 (b) of the Communications Act of 1934
shall apply with respect to the changes made by the Federal Communications
Commission in its regulations to implement the amendments made by subsection

(a) of this section beginning 1 year after the effective date of such changes.

On the surface this looks like a yawner. But let's dig a little deeper into
Markey's bomb shell and see what it really says. What is the commercial
mobile radio service or CMRS?

From Bennett Z. Kobb's Spectrum Guide let's see what frequencies this effects. Comments in parenthesis are mine.
"The FCC is changing the terminology it traditionally has used to classify
radio services. The new terminology is somewhat more opaque. An

essential
distinction is between PMRS and the commercial Mobile Radio Services
(CMRS).

Licensees of CMRS businesses provide for-profit, telephone
interconnect
(mobile and portable telephone or dial-up paging) service to the
public.
"Examples of CMRS include private paging services (except for
not-for-profit, internal paging systems); Business Radio Service
Systems
(anything with an IB designation in the Police Call consolidated
frequency
list folks-Larry); Specialized Mobile Radio (SMR) services (this hits
the
851-866 MHz band and that includes most the comms that the new trunk
tracker can monitor including the majority of the public service
agencies using trunked systems); and 220-222 MHz land mobile
systems, to the extent all of these offer for-profit,
telephone-interconnected service to the public;
Public Mobile Services such as Paging and Radiotelephone services
and the
Cellular Radiotelephone Service the 454 MHz and 800 MHz air-ground
radiotelephone service; the Offshore Radiotelephone Service; most
types of
mobile satellite services; and the Personal Communications Services
(PCS).

"Previously, most for-profit mobile services were called "radio
common
carriers." This term has not completely disappeared from use.

"Recent legislation brought all for-profit mobile radio services
under the
CMRS umbrella. Some former PMRS services were reclassified as CMRS
because they are largely devoted to for-profit service with
interconnection to the public telephone network. In some cases PMRS
and CMRS operations share bands."

Now let's look at the bottom line. Here are the frequencies you will
lose in
any future scanner you will buy if this bill becomes law.

Commercial Mobile Radio Services

1) Private Paging Services

Private carrier paging system (PCPS): 929-930/931-932 MHz

2) Business Radio Services

VHF low band: 30.76-31.24 (9 discrete

freqs)/33.14-33.16/33.40/35.02-35.14/35.18/

35.7-35.72/35.88-35.98/42.96-43.00 MHz

VHF Hi-band: 151.625-151.955/154.570-154.600 MHz

UHF band: 457.525-457.600/460.650-462.1875/465.650-467.1875/

462.750-462.925/467.750-467.925/463.200-465.000/468.200-470.000 MHz

There are also a number of chunks of the 470-512 MHz that will be removed.

3) Specialized Mobile Radio (SMR) Services

851-866 (806-821 MHz)/ 935-940 (896-901 MHz)

This is the only area I see where we can fight this law. Those of you who

have trunk trackers look in your trunk freq book and see how many public

safety agencies have been allowed to invade this portion of the spectrum.

There just wasn't enough room from them in the 866-869 MHz portion of this

band. I see this as the only area we can really fight this resolution, the

publics right to hear public safety agencies (even though the SMR bands are

private thanks to the FCC auctions of the spectrum). The other scary part of

this legislation is that no decoders would be allowed that would decode

digital commercial mobile radio services. Can you say digital Motorola trunk

systems? Wonder how much they donated to the Markey campaign? As I have said

on many occasions and in the April 97 MT article on all this, "follow the

money trail." No wonder Mot didn't care about the 235. It was only a flash

in their pans with this legislation.

4) Land Mobile Services in the 220-222 MHz region (recent reg changes have

turned this over to the CMRS)

5) Public Mobile Services

A) Paging and Radiotelephone Services

35.2-35.66/43.2-43.66 MHz/152.030-152.240/152.480-152.840 MHz

154.625/157.740-158.100/158.460-159.700 MHz

B) Cellular Radiotelephone Service

869-894 MHz (824-849 MHz mobiles)

C) 454 MHz Air-Ground Radiotelephone Service

454-455 MHz (459-460 MHz mobiles)

D) 800 MHz Air-Ground Radiotelephone Service

894-896 MHz (849-851 MHz mobiles)

6) Offshore Radiotelephone Services

157.200-157.400/161.800-162.000 MHz/AMTS 216-220 MHz

7) Satellite Mobile Services

137-138 MHz NVNG (148-150.050 uplinks)/399.9-400.050

1525-1559/1610-1660.5 MHz

8) Personal Communication Services (PCS)

901-902/930-931/940-941/1850-1990 MHz

So there you have it. The above listed frequencies would have to be removed

from new scanners being made prior to the type acceptance of any new

scanner. Existing models would have to be decertified then recertified to

prove that the new illegal to listen to ranges couldn't be received (the

AR-8000 syndrome). This is the situation we have today with the cellular

bands and it would now be expanded to the commercial mobile radio service if

HR 1964 is passed.

Ladies and Gentlemen I think you can see this is a serious threat. If you

don't get involved this time in stopping this legislation, you will see the

hobby of scanning listening cease to exist in the very near future. Get off

your rears and write your elected representative right now. This potential

new law is in the House Commerce Committee right now. Let's kill it before

it gets to the floor of the House and it becomes law.

Please give this message the widest possible circulation. Only numbers of

voters will overcome the millions that our elected officials have taken in

campaign contributions and will get this insanity stopped.

I will have updates as they become available and keep a watch at

www.grove.net and the scanner discussion forums as new info is available.

73 to all and let's start writing/faxing today,

The TM-V7A has some very nice features. It is easy to use with the guide and menu functions. The visual scan feature is like a mini spectrum analyzer allowing you to view band activity above and below center frequency. You have PL tone scan, encode and decode built-in, duplexer built-in. The auto simplex checker is great while mobiling. You don't have to reach down and check the REV for the input signal, Auto Simplex Checker does it for you.

Kenwood has designed the heavy duty chassis heatsink with fan cooling in the rear. A real improvement over previous models. I believe that this will add longer key down times and protection for the finals.

For the packet and APRS users, you can operate both voice and data modes at the same time with the additional data connector.

Alpha numeric ID for both memory and DTMF autodial. There are 280 memories available (alpha-numeric mode 180 mem.).

The blue display is nice and Kenwood has improved the display for better visibility in daylight. I remoted my control head in the car and use it in the cross-band repeat mode and wireless remote control from the HT.

I too am considering one of these radios, but actually I think I've already decided on the Kenwood. I don't like how the Yaesu tunes all the way to 1.3 GHz. To tune that broad, the Yaesu would have a much wider front end filtering (more shitty), making it more prone to overload. I also like how the Kenwood has the built in tone decoder.

Hope you aced it this time, OM! :-)

I failed *miserably* the first time I tried it. Didn't even
think about it again for a while. Spend 6 months having a world
o' fun working DX on 15 meters. A friend kept needling me to
upgrade, and I figured my CW speed was up to it after all the
practice. Started with the 20 as a "warm-up," and passed it--
coulda knocked me out of my chair. (And I just *barely* passed
it, for that matter.) ;-)

I know not everybody wants to, or has the equipment ... but I think
that actually using CW on the air is the best way to upgrade, myself.
And I sure had a lot of fun doing it, besides!

Source record: 193394

C�mon all you wanna be Southern California hams. No license needed! That�s right...
NO LICENSE NEEDED!! (to operate 2 meters on certain repeaters here in So CAL).

How can this be, you ask? I (and about a dozen others) have been told by FCC officials at the Cerritos,CA FCC office that there will be NO enforcement of Part 97, citing lack of directives from Washington and budgetary restraints.

So c�mon, join all the bootleggers and unidentified stations operating illegally here already in So CAL.... Operators like Richard Burton (ex-WB6JAC who�s served federal time three times for radio offenses already). He�s used 3 call signs (N6WIL, KF6AYO and the illegally obtained KF6GKS) in the year and a half he�s been on the air since his last incarceration. The FCC knows his location and even his phone number but sits idly by doing nothing while bootleggers swell the ranks here on 2 meters. C�mon and chat with �Jetlag� and �the notorious BIW� while enjoying license free operation!

Join the Tucker droppings on 147.435, talk on the Federally supported Department of Veterans Affairs machine on 145.46, or the Sierra Peak machine 146.61. Though
you can make it into these machines with an HT running 5 Watts, it�d be better to run a 400 Watt (minimum) base station or make friends with one of the owners of 600 Watt+ remote bases. There�s even a station running a KW living less than a mile from one of these repeaters! Hilarious!!!!!

Enjoy friendly (and license free!) ham radio!!!!

Seventy-thirds, good buddies,

W6NUTS (...for ID)

Recently I was told that several messages were passed on a local two meter "traffic" net that exemplify the type of traffic hams think useful. The text of the message was essentially "thanks for a great time with you today", the real joke was that the official formal routine traffic was being passed on the net between the actual receipents. And two of them see each other every day. They could have easily said the words to each other IN PERSON and probably already did. And cut the BS about training, in most cases hams can train for 20 years but when D-day comes they pee in their pants. Last September this same traffic net interuppted a hurricane weather net to pass the the type of traffic cited above during Hurricane Eduardo.

ZaaX:

Help me out here. Where is there a codified right under law for the public
to hear public safety agencies? I am unaware of this right in the
Constitution or any state laws. I'm not saying that it doesn't exist but
I want to know where it is.

Next why do you feel it is important to be able to hear public safety
broadcast? Information that is necessary for the safety of the public is
given out through the news media.

As a member of a public safety agency, the only thing that I have observed
the public to do with the information it gathers from listening in, is
abuse the information gained. They rush to dangerous incidents
and add to the general confusion. The press arrives at the worst moments
and interfers with operational personnel. I've even had radio "enthusiast"
ask me for the NARCOTICS channels so they can listen in. I
just love going to funerals and seeing wives and kids crying so you can
bet I give that information out.

Public Safety agencies don't want you listening in because you don't need
to know or have a right to hear information that is confidential under the
law. I also know you will find this hard to believe but criminal misuse of
public safety information is rampant.

At least three times a year we have some enterprising ham, with illegally
modified 2 meter equipment jump on our channel and tell us all about his
IQ, what he thinks about the police, and gives us lurid

details of his sex life.

Sorry ZaaX, but I'm all for any ban that will keep the public out of public safety frequencies.

73

Patrick

So now we should not be able to listen to the RADIO now because all radio users misuse the info right?? Sounds a lot like living in Nazi Germany or Iran to me. If I had to depend on the local news media for my info I would be very uninformed. Maybe we should have banned listening to the BBC during the Gulf War because they had a different story than the U.S. media. Where do you get off saying I don't have the right to listen to any frequency? The Comm Act of 1934 does not prohibit listening to anything as long as you
do not repeat anything.

I had heard those rumors when I was in the Marines, Colonel...I was an
MOS 2571 Special Radio Operator.

>
> And, if the Army is not training anyone in Morse any longer, why is it
> that my son communicated for his Special Forces team from the Iraqi

> (Colonel, U.S. Army, Ret.)

Ability to use morse will always be handy...a hundred years from now if everyone has encrypted communicators embedded in their teeth there will still be some need to communicate with morse. Just as it is often necessary to use hand signals...can you imagine a world where no one knew the one finger salute? Or refer to the post regarding landing aircraft on a carrier...the post regarding the morse eyelids of the captured crew of the USS Pueblo struck home...those guys were doing what I was doing. Lotsa folks don't realize it, but there were several Marines in that crew. In that era, we (Marines) trained and worked side by side with the Naval Security Group. The Marine Corps had two units in Vietnam...1st Radio Battallion and Company...I forgot, can anybody help?...of the Marine Support Battallion. I suspect those rumors may have had some basis in fact!

Best regards,

Travis N5AY

You're both right: nobody can keep you from listening, but don't expect a lot of enthusiastic cooperation from the agencies you are monitoring.

I've had to tape my badge too many times. The adhesive on the tape leaves a residue that is hard to polish off. I'd just as soon never have to do it again. And I was a member of an honor guard; I have to tell you that peace officer funerals are depressing. I'd much rather just drift from doughnut shop to doughnut shop, turn in my paperwork, and go home.

Maybe you could sign on as a reserve at one of the agencies in your area. It might change your perspective. Plus, you'd get to hear it all first hand.

Meanwhile, try to see the other side without so much hostility. The Nazi comments serve only to inflame; no intelligence is conveyed.

Best regards,

Travis N5AY

ps...I'm with you on the referenced legislation being the wrong solution...just don't blow it with zeal.

Zack:

Whats wrong with having certain communications banned from radio scanners? Where is it written that you have a right to listen in on others private communications?, sure listening to fire and police calls are interesting but just because it goes out over radio waves does not give you some special rights just because you own a scanner.

It wont matter if all scanners are banned in the future. All commercial stuff is going digital anyway. Oh my god, we should ban digital too, we wont be able to hear it on our scanners!! WE MUST STOP THIS!! ITS NOT FAIR! ITS A CONSPIRACY AGAINST SCANNER OWNERS!! Whaaaaaaaa.

Should you have the right to bounce a laser beam off your neighbors window and listen to his coversations just because you own a laser? If I want to build a converter to listen to the cellular band OR ANY OTHER BAND I'll do it, whats the big deal? Now that cellphones are going digital is there some special right you have that says you should be able to go to your local Radio Shack and buy a radio to listen to this new mode?

As far as Mr. Van Horns comments are concerned, he says:

> Ladies and Gentlemen I think you can see this is a serious threat. If
> you don't get involved this time in stopping this legislation, you will
> see the hobby of scanning listening cease to exist in the very near future.

Oh I see, the HOBBY of scanning is much more important than the privacy of paging sytems, cellular phones, etc. What a joke this is. If I am missing something here please point it out, but all I see are arguments

about YOUR rights to listen to private communications, I have not seen anyone discuss the rights of the radio USER.

>ERP. Have I misunderstood something?
>73
>Bob

No, I just mistyped it. Also, my figures for forward gain in dB is an
aproximate extrapolation from the specs for a 2 element quad, which has
about the same gain as a 3 element yagi.

You have to realize that raw data on quad antennas is relaticely
non-existant for quads over 4 elements. Nobody else to my knowledge has
ever recorded any such data for a common quad over 4 elements, much less
for one that is log-spaced and has an aluminum boom. I believe mine is
unique in it's particular design and combination of materials.

What I can tell you for sure is that with 6 watts output from the rig, I
was able to register a solid reading of 10 dB over S9 in San Diego from

Inglewood, CA which is about 120 Miles from me. My quad is about 40' above the ground. My Ringo Ranger is 50' above the ground and is not at all heard by the same station in San Diego with his squelch open, nor does it even move his S-meter. Perhaps that will give people a more tangible idea of the gain. Of course, results do depend upon terrain too. There are some hindering conditions I must overcome for that contact including a range of palisades and a small mountain range. That's why they call this the Los Angels basin, because we're surrounded by crests on all sides, except for a fraction of our shoreline, but even half of our shoreline also has very high ridges seperating the city from the beach.

Yes 13 dB would be right for a yagi the same size, but this is a quad and quads generally have about 1/3 ro 1/2 more gain than a yagi when the quad's elements are the traditional even-spacing. using log-spacing opimizes the gain. I guestimate my forward gain is likey 18 dB, but I thought I'd better give a margin for error which is why I stated the above range in my first post.

I don't know which newsgroup you read this in but after this I won't be posting to *.misc after this because it generated an annoying automatic message which I did not want or solicit. I hope it doesn't put me on any mailing list or I'll be having a fit with a certain someone's ISP admin. But if it didn't then I'll just ignore it and drop the newsgroup.

Hurricane Frequencies - RESEND

As Jim WK1V and others have pointed out, there was a glaring error in the URL. I humbly apologize for the misdirection, and the inconvenience it surely caused. I was rushing to get it on-line for hurricane Danny. Lesson learned!

Here is the corrected message:

Hurricane Frequencies is a list of more than 150 selected frequencies below 30 MHz that carry hurricane-related traffic during the hurricane season (approximately June 1 through November 1).

Times and frequencies are subject to frequent change, and are listed for reference only.

The list includes
- U.S. federal, state and military agencies
- U.S. Coast Guard weather and nets
- National Hurricane Center, FAA, FEMA
- Hurricane reconnaissance aircraft (hurricane hunters)
- Commercial weather broadcast stations
- Amateur radio emergency and disaster nets (ARES, RACES, etc)
- SSB, CW, FEC-SITOR and facsimile modes

Hurricane Frequencies is now available on my web site:
http://members.ecom.net/~snyder/hurrican.htm

The list is no longer posted monthly to rec.radio.amateur.misc and rec.radio.shortwave. It will still be posted approximately monthly via amateur packet radio. For those without WWW access, you may e-mail me for an ascii copy (approx 10 kb).

The moment someone begins sending vile and threatening "anonymous" email
is the time I can and will impose my standards. I did, and he lost.

I have a ham friend who purchased the following in March 1996 and now wants to sell as a package. IE, no piece meal.

Tri-Band Yagi (10-15-20M) 3 el., 12' Hygain TH3JRS $289.95
Balun 80-10m Hygain BN-86 $ 36.95
Mast 9' Steel Glen Martin M-1049 $ 58.95
Thrust Bearing Glen Martin TB-25 $ 89.95
Tower 8' Roof (good for 8 Sq. Ft of ant)Glen Martin RT-832 $229.95
Rotator (10SF) Yaesu G-450XL $239.95
Coax 100' RG-8 foam Belden 8214 $ 54.95
Rotator Cable 8 cond. Belden 8448 $ 24.95

____
Cost when bought new = $1,025.60

Wants $700 for the lot. Will give $100 discount if the buyer will help take it down.

I have my doubts about the Kenwood being all that much worse than the Yaesu,
if any worse at all. One reason is because of what you said about an IF intermod
protection for the Yaesu makes no sense at all. Most if not all intermod distortion comes from too much unwanted energy mixing in the first RF amp and/or first mixer, BEFORE the IF stage. It sounds like a bunch of marketing hype to me! Also, the Yaesu tunes as high as 1.3 GHz, so unless they use an expensive tracking front end filter, which I bet they don't, the Yaesu would be more prone to front end overload (more intermodulation distortion) UNLESS they don't have as sensitive a receiver.

The correct way to make the comparison is to test both radios in a lab with a 3 generator setup. I'm not convinced the Yaesu is better until I get one in the lab and test it.

SB DX @ WW $OPDX.314
Ohio/Penn DX Bulletin No. 314

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 314
BID: $OPDX.314
July 21, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1BB, KQ2I, WB2YQH and WB2RAJ from The 59(9) DXReport, W4FOA, N5PG, W6KK, W8CNL, F6AJA, G4BUE & DX News Sheet, HA0HW, HL2KAT, JA1ELY, JA1HGY, OH6KXL, PP5LL, SM0AJV, VE2PIJ and VY2SS for the following DX information.

1997 NEW ENGLAND DXCC CONVENTION. The Patriot DX Association will be sponsoring the 1997 New England DXCC Convention to be held Sunday, October 12th. The convention will be held at the Chelmsford Elks Hall, Chelmsford, Mass. (jct I-495/RTE3). An exciting program is shaping up with a pair of new shows from K1XM 1996 CQWW at J3, and the 1997 Spratley trip. N6EK will share his experiences at VK0IR. For more info, contact Bill, N1BB (E-mail address N1BB@JUNO.COM).

5A, LIBYA. The "DX News Sheet" reports that EA5FKI will be active early September from the 5A1A club station. RTTY was mentioned.

CE0, EASTER ISLANDS. Erling/LA6VM and Just/LA9DL have plans after their Peru (see South American Visit) trip to be active from here July 31st to August 4th during their holiday visit. Their callsigns have not been announced as of yet, but using a TS-50 and dipoles antennas, their suggested frequencies were given as:
CW - 7001, 10101, 14001, 18069, 21001 and 28001 kHz
SSB - 7047, 14185, 18120, 21275 and 28475 kHz.
QSL to their home calls via the bureau or direct.

CY9, ST. PAUL ISLAND (ATTENTION RTTY OPs). Robby, VY2SS, reports to OPDX that he and operators VY2LI, VY2CD, VY2RO and VY2KHZ will be active during the last week in July. The team hopes to land on the morning of the 23rd (weather permitting) and leave on the 31st. They report that their activity will be concentrated on RTTY as it has been neglected in many past operations. Their callsign will be CY9SS. QSL via VY2SS. There will also be activity on 6 meters beaming at Europe with a beacon on 50.101 MHz. They will also participate in the IOTA contest from there

as well.

EP, IRAN. Paul, N5PG, has recently called the League to find out the status of EP2MKO. Bill Moore at DXCC advised him that this station is "OK" for DXCC. This station has been heard recently on 20 meters (around 14001 kHz) around 1200z or between 2200 and 2230z. QSL via UA6HCW.

FO, FRENCH POLYNESIA. The following group will operate from Bora Bora as a Multi-Single entry in the CQWW Phone contest in October. The operation will be from the Bora Bora DX Club station and will use the club call FO8DX during the contest. Stan, FO5IW, will be their host for the week. Outside of the contest, the group will operate with individual FO calls, Ron N6VO/FO5VO, Doug N6RT/FO0RT, Mike W6RW/FO0RW, John KA7CQQ/FO0CQ and Charlie W6KK/FO0KK. QSL to CBA's or W6DA.

FR, REUNION. Look for DF2SS to be active sometime between July 28 and August 17th. He will sign as FR/DF2SS/P and will operate mostly SSB on 160-10 meters.

FRENCH WEST COAST IOTA DXPEDITION. Just a reminder that David, ON4BDS, continues to activate islands from here (EU-157 and EU-074 this past week). His next stops are: EU-065 (Ouessant) July now-22; EU-094 (Glenan) July 22-25th and EU-068 (Sein) July 25-28th. After he leaves Sein, he might also activate EU-105 and EU107. Operations are planned for activity on all HF bands, including WARC. QSL cards are "OK" via the 1996 Callbook address, or via the bureau to ON4BDS.

IOTA NEWS.....
Chung, HL2KAT, informs OPDX that there will be some IOTA activity from South Korea. Team leader Lee, DS4CNB, will use the callsign HL0Z/area to activate the following islands: HL0Z/5 Hansan-do Island (AS-080) July 19-20th; HL0Z/4 Huksa-do Island (AS-093) July 26-28th; HL0Z/4 Wan-do Island (AS-060) July 29; and HL0Z/4 Soan-do Island (AS-085) July 30-31st. Suggested frequencies: CW - 7003 or 14020 kHz and SSB - 7084 or 14260 kHz. QSL via bureau or direct to: D.R. Lee, DS4CNB, KwangSan P.O Box 111, KwangJu 506-050, Korea

A Group of Finnish-German hams will activate the Island of Hailuoto (EU-126) from August 15-17th. They will use call OH8TA and will operate mostly on 14260 kHz, but there will be other HF/VHF/UHF bands that will be used as well. Operating modes are SSB and CW. QSL cards will be delivered via bureau.

Jay, PP5LL, will be active from Campeche Island (SA-026) from August 7-11th and San Franciso Island (SA-027) September 1-15th. Callsign to be used on both islands will be PR5L. Activity will be on CW/SSB on the use IOTA frequencies. QSL via PP5LL.

JD1, OGASAWARA ISLAND. Look for members of "Mitubishi Electric Tokyo Ham Club" to be active from here August 14-16th, as JM1YGG/JD1. They will be operational on 40-6 meters CW/SSB. QSL via JM1YGG (JARL) or direct to 7N3GNX: Tatuo Torii, 34-10 Sakuragaoka 3, Tama, 206 JAPAN

KH2, GUAM. JA1HGY and JI1DLZ will be active from here July 25-27th, as KH2/JA1HGY and WH2Q, respectively. Operations will be on 40-6 meters (modes not mentioned). QSL KH2/JA1HGY via JA1HGY: Nao Mashita, 8-2-4 Akasaka, Minato, Tokyo 107, JAPAN. QSL WH2Q via JI1DLZ.

KG2, GUANTANAMO BAY. Larry, WB6VGI, will be returning to GIMTO, Cuba, around the 8th of August for about 30 days. Signing KG4ML (CW and SSB), he will be operating 160-10 meters on the weekends and 80-15 meters on the weekdays. His work schedule will determine the weekday times, but he hopes to be on from 1000-1130 and 2200-0300z. Larry states the weekends will be the big push (but taking time out for a fishing trip or two). This looks like the last trip down to GITMO for Larry, so he is going to try and work as many that need KG4 as possible. WARC bands will have a higher priority as the resident HAM population spends a lot of time on the "usual" bands. He reports 10 MHz is very difficult due to a local noise source that's about 30 over S9, but he will try whenever the noise is absent. QSL is via WB6VGI.

OH0, ALAND ISLAND. A group from Sweden will be active from August 14-17th. Callsigns to be used: OH0/SM0AJV, OH0/SM0EEH, OH0/SM0GNS, 0H0/SM0HJZ, OH0/SM0HPL, OH0/SM0IEA and OH0/SM0IHR. More information about Aland Island and this DXpedition can be found on their WEB page: http://www.mistra.se/oh0/

PIRATE OPERATIONS REPORTED!!!!!
QSL Manager Ray, W8CNL, reports the operation of a 9K2ZZ on the 4th of July was a SLIM. Please DO NOT QSL for this operation. Last operation from 9K2ZZ was on December 4, 1996.

A station recently operating as ZD7HI on CW is reportedly a PIRATE. The real Chris, ZD7HI, only operates SSB. Chris is also not active on 160 or 80 meters at the moment.

QSL INFO AND NEWS.....
Ray, 5R8FK, is asking that we give the widest dissemination as possible for his new QSL route. He asks that "QSL via home call NY3N" be effective immediately.

Paul, N5PG, reports working 9K2RR (May 97) who said, "QSL via K1VKO". K1VKO advises that he is NOT and NEVER HAS BEEN QSL Manager for this station (or any other for the last 5 yrs).

F5LGQ informed Jean, F6AJA, that he is waiting for the XT2DB QSLs from the printer. Some technical problems appeared and it's necessary to wait. PLEASE be patient!

SOUTH AMERICAN VISIT. Before heading to Easter Island (see CE0), Erling/LA6VM and Just/LA9DL plan to be active during a holiday trip now until July 26th as OA/LA6VM and OA/LA9DL. They also plan to vist Bolivia from July 26-29th, Chile from July 29-31st, and Brazil from August 5-7th. They have not received the licenses for these countries as of yet, but expect to receive them upon their arrival. Suggested frequencies and modes are the same as the CE0 operation.

SPECIAL PREFIXES. From now until 2400z September 15th, be looking for the following special prefixes to be active to commemorate the "Centenary for Victorian Order of Nurses for Canada" (Regular prefixes/Special prefixes): VA2/XL2, VA3/CI3, VE1/CG1, VE2/CG2, VE3/XL3, VE4/CG4, VE5/CG5, VE6/CG6, VE7/CG7, VE8/CG8, VE9/CG9, VO1/XO3, VO2/XO4, VY1/XN1 and VY2/XN2.

TK, CORSICA. F5UKW will be signing TK/F5UKW from August 12-31st. He will be active on 40 and 20 meters during his evenings. If he can, he will be active from Cavallo and/or Lavezzi (IOTA EU164).

XV, VIETNAM. Rolf, XV7SW, has returned to Hanoi after a month's vacation in his homeland of Sweden. It has been reported that Rolf is scheduled to leave his position at the Swedish Embassy in the middle of September. He will return to Sweden, but plans to keep his license since he expects to visit Vietnam again later in the year or early 1998.

YI, IRAQ. Laci, HA0HW, has recently talked to his good friend, Sanyi, HA7VK, who is currently active as YI9VK in Bagdad. Sanyi's licence allows him to work on 7, 14, 18, 21, 24, 28 MHz CW/SSB/RTTY. Unfortunately, he is forbidden to work on 160, 80, and 30 meters from Iraq. Sanyi sent in an application to use these bands for a week as "experimental" bands. He hopes he will get an answer before leaving for home. Laci reports good news from Sanyi who stated that he can now operate from his place of residence. Last week Sanyi had to operate from The Central Radio Club only, with his work schedule and the open hours of club, his operating times did not work out too well. Now he has full-permission to work from his residence with his own rig. His son Gabi, HA7SK, is also active as YI9SK, but only has permission to operate from the club. They will be trying to get this changed with the help from Mr. Adnan, YI1DX, who is the President of "Iraque Amateur Radio Association". Sanyi will leave July 29th.

Z2, ZIMBABWE (Update). As mentioned in OPDX.311, Cedrick, N9YXA, would be active from here (August 3-21st), but he did not know at that time of the announcement what his callsign would be. Well, it is official now, Cedrick will be signing Z2/N9YXA. Check out his 1997 Zimbabwe DXpedition Website at: http://www.netcom.com/~n9yxa/zimbab/

ZD7. ST. HELENA. Gilbert, ZD7BG, is active on CW 80-10 meters. Last QSNs reported were around 14015 kHz between 1900 and 2100z. QSL to P.O. Box 157, Jamestown, St. Helena Island.

ZK1, SOUTH COOK ISLANDS. Tony, KQ2I, informs OPDX that he will be active on 30 and 40 meter CW as ZK1AAT from Aitutaki, August 1-11th. There is a possibility for him to be active from Rarotonga, July 25-31st. Tony states, "Real signal reports appreciated". QSL via his homecall.

online at 216-237-8208 28.8k/14400/9600/2400/1200 and leave a message with
the Sysop or send InterNet Mail to one of the two following addresses:
kb8nw@barf80.nshore.org -or- aq474@cleveland.freenet.edu
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which
shares the same phone line as BARF-80 BBS using a data/fax/phone switch.
To access: 1) Dial Number. 2) Wait for first ring (the second ring should
be a false ring from the fax/data switch box) and then dial four quick
ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every
second will not have to do this step.) 3) The phone will pick up and
after the "BEEP" leave your voice message or FAX.

Perhaps the kids would be more *INSPIRED* and less likely to "hurl" if
they saw footage of an eccentric nut case teacher-ham (Burt Fisher)
sans VE credentials, riding his little moped to work by day and
posting derogatory venom on usenet by night.

> instead of trying to start another bickering session regarding your

Because Eric does not have any technical knowledge, his only
knowledge is on how to stir up trouble & anger others.

> I think many members of this newsgroup were convinced that
> you had run away with your buddy M@s@ to share a wild month of
> uninhibited carnal pleasures with each other!!

hahahahahahaha

> Go crawl back under your rock, Eric. I'm sure no one in this
> newsgroup will miss you.

Yes, that is probably true.

You will notice that most people simply ignore Eric. He is amoung
the likes of Burt Fisher, Jeffrey Herman, and Bill Cheek; most
people have figured out that they only survive to cause trouble
& ignore them.

(although their little outbursts can be tryin sometimes)

The band is EXACTLY the same 902-928 MHz ... we share it
with the Part 15 devices. We are a licensed service, entitled
to protection, the Part 15 devices are unlicensed and are NOT
entitled to protection from interference. By law, they may not
interfere with our activities and must tolerate any interference
which our activities might cause (assuming we are operating
within our technical rules).

1420. Re: New scanner law ='s bad news!!!!!!!!!!!!!!!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-20 00:00:00 UTC
From: Fred <peerenbf@dma.org>
Message-ID: <Pine.LNX.3.95.970720201837.2013B-100000@dmapub.dma.org>
Source record: 193240

I guess that this is going to tee off a bunch of folks, but here goes. Any time a government agency, local, state or fed wants to stop the tax payer from listening to their activities there is something wrong and they are worried that the taxpayer will hear how they waste tax dollars.

If you think that I am blowing smoke, just listen to a good trunked system for a few weeks. You will hear blatant FCC rules violations in the language that is used, and in the personal traffic passed. There is a gross missuse of the spectrum most of the time with about 10 percent useage being correctly applied. Before you go off on this, I do have the FCC rules right here, in my shack where I can read them. I worked in the private sector in broadcast engineering for enough years also to know the rules and regs. I have heard city and county employees use their radio/phone to call up girl friends and discuss various practices and what they were going to do, I have heard their children using the radio/phones to call their friends. There are too many things to point out, as well as being illegal for me to really mention them. What we need is the FCC to start monitoring again. But alas, they are broke, do not have the money to do so and the local big wigs know this so they whant all radios to be made "unable to recieve their frequencies" so that the abuse can carry on without detection. Now I am **NOT*** talking about cell phone calls!!! I am talking about the city, county and other employees of the taxpayers radios that are intended for business and public saftey use.

Enough said I would say. But remember this, when the government, any government--state, local or what have you, is afraid of letting the taxpayer, who is their employer hear what they are doing there is something really wrong. Also remember who their bosses are, that's right you, me and all of the other tax payers, that's who. does your boss at work allow you to abuse company property like that????

Fred

Zack:

I don't mind you quoting me in this news group, but I do mind that you did not post my answer to your response. This is less than ethical behavior, in my opinion, and goes a long way to show how information is misused and abused.

I assume you have jumped to this news group because you did not receive the support you had hoped for in the policy news group. I would suspect that you will find all kinds of support in the scanner news group and perhaps should look for support there. Rest assured however that I am calling my Washington representatives and asking them to support this new law.

Hopefully you will be able to accept the outcome of the legislative process when, lose, or draw.

I like your line of reasoning and here's how it should work. The
government has a tanker full of waste plutonium. It passes by your house
overturns and it spills onto your property. It's ALL yours period. I
like that, it should save the taxpayers millions in toxic clean up fees.

Hi John,
Still sore over me discovering you were the anonymous name-caller
on here last year? You, like James, left hints in the header of your
anonymous posts. Or are you still sore that I pointed out that you
didn't really own any repeater, contrary to what you were telling
everyone on here (every one of your posts began and ended with
"I own the Portland 147.435 repeater...").

You've been silent for over a year now. I suppose you were hoping we'd
forgotten all about your bad behavior. We didn't.

Message-ID: <33d16d01.10277361@news.ecom.net>
Source record: 193267
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

Hurricane Frequencies is a list of more than 150 selected frequencies below 30 MHz that carry hurricane-related traffic during the hurricane season (approximately June 1 through November 1).

Times and frequencies are subject to frequent change, and are listed for reference only.

The list includes
- U.S. federal, state and military agencies
- U.S. Coast Guard weather and nets
- National Hurricane Center, FAA, FEMA
- Hurricane reconnaissance aircraft (hurricane hunters)
- Commercial weather broadcast stations
- Amateur radio emergency and disaster nets (ARES, RACES, etc)
- SSB, CW, FEC-SITOR and facsimile modes

Hurricane Frequencies is now available on my web site:
http://members.ecom.net/hurrican.htm

The list is no longer posted monthly to rec.radio.amateur.misc and rec.radio.shortwave. It will still be posted approximately monthly via amateur packet radio. For those without WWW access, you may e-mail me for an ascii copy (approx 10 kb).

Let us inject a bit of facts here. The oft-repeated claim that the U. S. military is no longer learning Morse is NOT TRUE. The Army Intelligence School at Fort Huachuca, Arizona, is still training lots and lots of Morse operators for all the services. Why? Because the military forces of most of the rest of the world still communicate using manual morse and we must be able to intercept it. There are rumors to the effect that we do just that.

And, if the Army is not training anyone in Morse any longer, why is it that my son communicated for his Special Forces team from the Iraqi desert using manual morse?

Joe, W4HH
(Colonel, U.S. Army, Ret.)

Mr. Mac:

The problem may be that, when you write it down, you try to read what you are writing as you write. This is a common problem. Instead of just writing down what you copy and reading it after you have copied it, you may be trying to read it and make sense of it as you copy. Trying to do that will kill you every time.

Nope - (Speaking as a VE) FCC doesn't require anything written down. You
could sit there and listen to the whole code tape played, and write
nothing. When the
test is given, we (as VE) MUST grade the test as you fill it out, with
no
regard to code copy. If you fail the questions, we'll look for 1 min of
solid
copy, but if you fill out an answer because maybe you thought you heard
it,
it's quite OK.

Hi everybody...

I am looking for individuals interested in creating a system that would see amateur repeaters be able to link to each other over the internet.

To make this work I need some people that would like to help out by trying it out as well as some people that are good at making things work, mostly in the software environment.

If you are interested, please let me know...

Well, this is my first post to the group, so I hope it's done correctly.

I am pleased to announce the addition of two new Web Sites for you to check out. The first is The KB8TNQ Ultimate Amateur Radio Page! If you are looking for a great source of information and some interesting links, this is the place! It is updated weekly and we accept link information from other Amateurs with Sites.

The second, The Central Michigan Amateur Radio Club Web Site , is only a week old and is already receiving some GREAT feedback. It is mostly about our club, BUT! We also feature a "Trader's Page". This is open to ALL Amateur operators with items for sale and the easy guidelines are available for you to see on that particular page.

Stop in, gang! We'd love to hear from you. All email is replied to within a few days and we hope to have the "Trader Page" up and running in the coming week.

7-3,
Jim

Hello all:

We'd like to invite you to visit a couple new Web Sites, dedicated to
Amateur Radio.

The first, The KB8TNQ Ultimate Amateur Radio Page! is a great source
for items of Ham interest. With links to a variety of other Ham Pages,
as well as a weekly update with a "Site O' the Week" and Weather-Related
Sites, you'll enjoy this one.

And the second, The Central Michigan Amateur Radio Club Web Site is
mostly about the club itself. However, a new page, the "Trader's Page",
is something we are starting to get some interest in. If you have ham
gear to sell and want a FREE place to list it, this is the place!

7-3 and we look forward to seeing you soon,
Jim (KB8TNQ)

1440. CONTACT - hams in movies

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-20 00:00:00 UTC
From: fisher@rouge.phys.lsu.edu
Message-ID: <5qsa6n$c4s$1@its1.ocs.lsu.edu>
Source record: 193278

I just saw (and enjoyed) the movie "Contact" and was wondering what other folks thought of the depiction of hams in the film. I think it gives us some nice PR and it was nice to see they actually had someone calling "CQ" instead of using CB lingo. More importantly, I thought it refreshing that the main character (shown in a flashback of her childhood) seemed enthusiastic about her hobby. It really reminded me of how fascinating radio seemed when I was a kid (it's still fascinating, but nothing can match the enthusiasm of those early years). Let's hope this glimpse of the hobby inspires a few kids out there.

At some risk of offending the "purists", I am willing to pass IP packets to the Internet on a 24/7 basis. Our gateway is in Southwest Virginia. I imagine the best way is a standalone PC plugged into our 10BaseT hub and from there to our gateway.

How do we do this anyway?

Recently I was told that several messages were passed on a local two meter "traffic" net that exemplify the type of traffic hams think useful. The text of the message was essentially "thanks for a great time with you today", the real joke was that the official formal routine traffic was being passed on the net between the actual receipents. And two of them see each other every day. They could have easily said the words to each other IN PERSON and probably already did. And cut the BS about training, in most cases hams can train for 20 years but when D-day comes they pee in their pants. Last September this same traffic net interuppted a hurricane weather net to pass the the type of traffic cited above during Hurricane Eduardo.

1445. The aRRL as we really see it?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-20 00:00:00 UTC
From: burt1@rocketmail.com
Message-ID: <869399251.8710@dejanews.com>
Source record: 193283
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

he following is what really should have been posted:

HAM RADIO SERVING AS EXTRA LINK DURING MIR CRISIS

For US ham-astronaut Mike Foale, KB5UAC, aboard the crippled Mir space station, ham radio is providing a valuable supplement to conventional Russian and NASA communication systems. However there were complaints from the Amateur Radio Relay League that non hams were using the ham equipment.
The aRRL said that even in a dire emergency a ham license is required to use a cherished ham frequency. In spite of aRRL pressure on NASA routine ham radio operation and school contacts have been canceled during the current Mir crisis, however.

As Bordelon related: "A hush fell over the room as Mir started its trek above the horizon. We didn't know if they would be on--power was down to 50% available and all nonessential equipment was turned off. The aRRL complained that ham equipent was essential as far as the ham community was concerned.

The aRRL said radio has a very high priority even when survival is the key, and power is critical on Mir,"

VOLUNTEER PROTECTION ACT OF 1997 SIGNED BY PRESIDENT

Ham radio volunteers stand to benefit from "The Volunteer Protection Act of 1997," signed into law June 18 by President Clinton. The measure aims
to provide Federal protection for hams from "meritorious"
lawsuits filed against individuals due to their incompetence as hams.

FCC SEEKS COMMENTS ON PETITIONS FILED TO AMEND AMATEUR RULES

* RM-9114, filed by James Cardillo-Lee, KE6VGV, Petaluma, California, asks that the Commission change the Amateur Service rules to permit hams who are emergency personnel engaged in disaster relief efforts to use ham radio frequencies while in paid-duty status. The aRRL was dead against anyone but aRRL employees being paid.

FORBES ARTICLE
HIGHLIGHTS HAM RADIO "MAGIC"

Readers of the July 7, 1997, issue of Forbes magazine won't find any sleight of hand in the article "There's No Magic in It," by James Clash, WA3JID.
The two-page feature talks discusses what it is about ham radio that's

kept the hobby alive when it "should have died with the advent of modern communications." The author admits ham radio died within the last 10 years as the average age of the ham is well over 50.

The article apparently put out the ham radio flame among readers, several of whom already have called the aRRL for more information about getting
out of the hobby on on to the Internet.

HAHAHAHAHAHAHA, NO I am not!!. It was VERY FUNNY!! You were
WRONG!!! I have ALWAYS used my REAL name on the internet, even
when I did not have an e-mail address.

So, I can't be sore at something that didn't happen.

> Or are you still sore that I pointed out that you
> didn't really own any repeater, contrary to what you were telling
> everyone on here (every one of your posts began and ended with
> "I own the Portland 147.435 repeater...").

Think what you want. You are THOUSANDS of miles away in HAWAII
yet you think you are an expert & authority of wether or
not I own repeaters! You are an IDIOT.

You should read a ARRL repeater directory. I own repeaters in
Portland, Oregon & Sioux City. I also did 4 years as a board
member for the Oregon Region Relay Council (the group that coordinates
repeaters in Oregon) from 1990 to 1994. I could NOT have held such a
position without having at least ONE operational repeater in
Oregon.

BTW- the situation about me posting statements like "I own
the 147.435 repeater" were during a time when a fool named
"Andre Dusablum" in Vancouver, Washington made several bogus
Newsgroup posts about the Portland 147.435 repeater which
I DO own & about that time it had my call on the repeater.
(Now it uses a different call)

> You've been silent for over a year now. I suppose you were hoping we'd
> forgotten all about your bad behavior. We didn't.

I was just thinking the same about you. You have been quiet for
some time now, but no one has forgotten YOUR behavior.

Could be this guy was listening to 900Mhz cordless phones that operate in the
frequency range rather than cellular.

1452. HELP WANTED with heathkit

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-20 00:00:00 UTC
From: don.phelps@infoway.com
Message-ID: <869406433@infoway.com>
Source record: 193290

The factory parts place is on the web,
search Heathkit.

If that doesn't work, I would be willing
to look for my manual to my AR-15
(I think that's the number of the 35 watt/ch
receiver I have.)

Let me know after you have found their site and searched for
a way todeal direct.

Co> Subject: HELP WANTED with heathkit AR-15

Co> Hi All... I'm looking for info on an old heathkit stereo am/fm
Co> reciever, the AR-15. I Need to know where i may be able to fin a parts
Co> list, of schematic. My ar-15 works fine except that the mode
Co> (am/fm/tape/aux/phono) switch is damaged, and I need to get the part
Co> number to order a replacement.

Co> Thanks

Co> Cogline@emi.net

From: don.phelps@infoway.com
Message-ID: <869406434@infoway.com>
Source record: 193291

I'm sure there must be a faq somewhere, but would someone
care to educate me about relationship between the
amateur radio band 902-028 MHz
portable telephone 900MHz models.

How close or far away are they from each other?
Has anyone rebuilt the portable phones to work in the amateur band?

Has anyone tried out the Uniden 900MHz portable phone $89
that comes with a headset?

I'm wondering how well they work for
range
quite, clear communication
resistance to intermod, rfi from ham transmitters, computers.

I am considering doing the Robo transformation and going portable phone
for walks from house, working in yard, doing phoning from a computer
database, etc. Can one toy do all?

73, Don n6mce

I've seen the petition started and it is truely an ARES appointees crying towel. Others having had prior viewings of it have also made the same comment. I wonder how many "electronic" signatures will go onto this list. Enough to verify only ARRL members only signing the petition.

The worst part is that these people have made their elected offical an enemy before ever trying to work with him. Could you imagine recall in less than 6 months term in office. Sure have a bunch of ego sensitive former appointees in NYC=LI

-snip-

You bring back memories of building my first shortwave reciever, a radio shack "P Box" kit, 3 transistor regen. The band was tuned by changing the number of turns on a coil and a simple 365pf tuning cap for tuning. I pumped the output into my stereo and must have logged a hundred shortwave stations.

Look for plans to build a 'super regenerative reciever' do a web search and you may even find some online. If not check your local library, a simple regen circuit can be found in lots of different radio books. There is one in the QRP Classics book if you can find one, more than likely in an amateur radio outlet somewhere.

Or you can always try the Ramsey Company they advertise in 73, QST, CQ and many other hamradio mags avail at you local stand.

Good luck, Tim, ka8ddz

Perhaps, but the new section manager has shown little to no
understanding of emergency communication with respect to
R.A.C.E.S. I suspect the official he sent his letter to
had quite a good laugh. A R.A.C.E.S. Radio Officer is
appointed by the appropriate EMA organization, not by some
ARRL "official". I also find it interesting that the section
manager in his letter claims to "manage all amateur radio
services for our group". I always thought of them as
coordinators, but perhaps I have the wrong impression.

Sounds more like some megalomaniac got himself elected as
section manager and now wants to seize control.

Rick, not sure what you mean by "reset". But I agree with the other reply posted. Try removing the battery connection either by pulling a fuse or temporarily removing the connector at back of radio (which you probably can't reach without removing radio from instrument panel first) or removing a battery lead temporarily.

If that doesn't get it done, then give me more details. I work at Delco Electronics who makes the radios in most GM cars. My job is test engineering on audio systems. If I can't help you, then I can find someone who can.

If you remove the radio, then the model number on the label will help. That would be a number like "16041273" for cassette or ""16050313" if it also has a graphic equalizer.

Maybe it needs repair and simply disconnecting the battery will not fix it.

Also since they aren't licensed than you aren't interferring with any
communications. Since you are licensed you have a legal right to the
frequency while they don't. Just let them file a complaint to the FCC.

1468. Why do noise blankers suck in expensive HF rigs???

Funny you should mention this problem. I responded to a post where a guy
was complaining about the noise blanker on his FT-840. I owned an 840
and noted that the blanker was just about useless. I have also noted
that the blankers on my recently aquired FT-1000D aren't all that hot
either.

Another guy commented that the blankers on his Kenwoods work very well
and it may be just a matter of finding the correct resistors. My
question then is why couldn't Yaesu find the right resistors in the
first place?

Watching you on the internet & fidonet has shown that to be true
as indicated by your posts. (your statements)

> I know this technique you are using, stir up trouble, go away for a
> while and then come back and blame some convenient target for all of
> it (all the while "appearing" innocent of the deeds you did).

Oh ok Eric if you know this little technique then why
are you walking into it??? You sure like to point fingers
but never take any responsibility for your own actions. How
do you think this thread of "KING ERIC" got started??? I
WAS NOT the originator the thread.

> How about it joh? Care to explain the 18 months worth of postings at an
> average of 4 per day?

You have been accusing me of 18 months of posts since last November
or December but CAN NEVER back that up. You can't because it is
not true. I got my internet access in April of 1996. Even April 1996
to today is not 18 months. But go ahead & prove me wrong, show
a few messages from Dejanews. You won't be able to because you
are either wrong or just plain lying.

> Most of those postings tended to be persoanl
> attacks upon one person or another for not agreeing with your point of
> view.

Actually, SEVERAL people were gatting on a person who was causing
a great amount of trouble on a certain NG. (remember Ron Katz,
tvine, Glen Quarnstrom, flatted5th, & the MANY others. There was
a large majority taking action to rid that NG of the problem. It
took a LONG time but was finally successful as that person
usually behaves on that NG now.

> BIG GIANT QUESTION, John? WHEN ARE YOU GOING TO JOIN THE HUMAN RACE
> (instead of living in your own little world)?

That's the pot calling the kettle black.

> Point of fact, john, you started this particular little arguement by a
> personal attack upon me.

NO I DID NOT start this thread. You better look again if you think
that.

> However, since I know that you will attack me again (and attempt to
> create a situation where I appear to be the bad guy), any further

I can't make you look bad, you can only do that to yourself.

> Since you have no respect for others opinions, I shall not respect
> yours. I will do the one thing that you cannot do. I will weigh the
> facts as they are presented, and make an educated statement of opinion

What are you a damm professor of gramatic & spelling?? Let that crap
go!!

Actually Jeffrey, I FORGOT how much you DESIRE ATTENTION & LOVE to
do things like the above & other just to get attention.

> Let's see. John Mackey? Oh yes, you were the anonymous name-caller
> on .misc about a year ago. You failed to hide some clues in the
> headers of your not-so-nice anon posts, though. I guess I did
> cause you some trouble when I exposed you. I'm awfully sorry.
> Those anon emails also caused you to lose your ISP. At least Burt,

Sigh :(

No, I didn't do any anon e-mails.

:)

HAHAHAHAHA, no little fool, remember you & I just spoke about this
EXACT issue LAST WEEK. So you say you caught me, SHOW what you caught!!
If you don't have the messages then pull them up thru dejanews.

You didn't cause me any trouble, you just made yourself look like
a fool as you are doing now and do many times.

BTW - Last year I DID NOT HAVE an ISP. I didn't need one as I had
a direct internet connection via a T-1. You didn't & could not have
gotten me kicked off of any ISP.

> Bill, and Eric don't hide behind phoney names and addresses.

So what is your point??? (I never said they did)

> Oh, still telling everyone you own the Portland 147.435 repeater?

Yes I do tell people the above. Do you have anything to prove other
wise??

> Sorry to make you sweat.

No problem, you never did.

Sorry to make you live in reality for a few moments.

When I was looking for a mobile rig, I heard the same thing. 706 hardly works.
Even the FT900CAT had problems and requires a mod that helps somewhat.
Heard the TS130S noise blanker worked well, so got one.

I'm *not* that familar with car radios but I don't remember seeing a
specific "reset" button on any GM radios , but how about just lifting
one of the battery terminals? That always has cleared the
memories/clock etc. in any GM cars I've owned in the past. Just a
thought.

The problem with noise blankers is that as you allow for wider and
wider pulses, the dynamic range is reduced further and further.
That's why many receivers have selectable bandwidths for their noise
blankers. Even so, noise blanker performance is a compromise.
Obviously, you are working in an RF environment where dynamic range is
secondary and sensitivity is more important. In cases like this,
you'll wish your noise blanker were more aggressive.

My own personal opinion is that manufacturers are afraid of making an
aggressive noise blanker because they're afraid of posting a poor
dynamic range specification. So the NB button(s) on many radios are
nearly useless.

I have read about some creative alternatives. One of them was for
getting rid of light dimmer and motor controller hash by synchronizing
a blanker with, say, a 180 Hz rate (with a delay adjustment) derived
from the local power line. Assuming that most line noise in your area
is synchronized (often it is) you could easily blank your receiver

input without using any of the incoming signal.

Another method of noise cancellation is to use an active cancellation antenna. One antenna listens for signal, the other for noise. The noise phase and amplitude is adjusted so that it cancels out the nearby interference.

In any case, both of these efforts are likely to increase IMD in the presence of strong signals, however I agree with you that if one is going to put a switch on a radio, it should do something.

1482. Radio Receiver Building for Dummies

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-21 00:00:00 UTC
From: nospampleez@biteme.com
Message-ID: <33d3896b.11337845@m3-hh-alpha.03.net>
Source record: 193167

Are there any good introductory books about how radio receivers work
and how to build them?

I like to listen to shortwave, but find that most of the 'affordable'
receivers come with a cheap antenna. I've gotten to the point where
I'd rather build my own (receiver and antenna). It's been a long time
since I've touched a soldering iron (senior year of high school -
1979), but I'm game to re-learn what I've forgot since high school..

Any suggestions for the eager beginner?

I also have in my possesion about 25 feet (maybe more) of
10 Base 2 Ethernet cable. It is shielded RG-58 Type 20 AWG cable.
Should I try to strip the shielding and use the wire to build an
antenna?

Thanks for the help....

Guinney Pigg

TO ALL AMATEURS IN THE NYC/LI SECTION OF THE ARRL:

An effort has been undertaken to remove Len Buonaiuto, KE2LE, from his position as Section Manager of the New York City/Long Island section of the ARRL.

A Web page containing information on this recall has been established. Members of the Section are urged to read about the allegations made against KE2LE so that they can determine for themselves if KE2LE's actions merit his removal.

The page may be found at http://www.li.net/~jtomason/recall.html

If, after examining the information, you feel that KE2LE should be recalled, please sign the petition, and, when your ballot arrives asking if KE2LE should be recalled, vote YES. Information on how to sign the petition can be found on the Web page, along with the latest news concerning the recall.

Thank you for your time.

Can you provide the details of this "extrapolation"? Differences
in gain between short yagis and short quads disappear quickly as
the boom length approaches multiple wavelengths.

> You have to realize that raw data on quad antennas is relaticely
> non-existant for quads over 4 elements. Nobody else to my knowledge
> has ever recorded any such data for a common quad over 4 elements, much
> less for one that is log-spaced and has an aluminum boom. I believe mine is

Huh? Any decent modeling program based upon any of the NEC models
can tell you what the gain will be. Having done extensive modeling
of yagis, quagis, and quads at VHF/UHF, I can tell you that there
is little in appreciable gain to be had in quads over yagis when you
hit 3+ wavelengths.

> What I can tell you for sure is that with 6 watts output from the rig,

> seperating the city from the beach.

Anecdotal evidence is just that. I've worked Oklahoma from Illinois
on 6 meters loading up my 2 meter ringo ranger. That certainly
isn't an endorsement for a 2 meter ringo on 6.

> Yes 13 dB would be right for a yagi the same size, but this is a quad
> and quads generally have about 1/3 ro 1/2 more gain than a yagi when

This is only true for very short quads. At multiple wavelengths, the
differences are negligible.

> using log-spacing
> opimizes the gain. I guestimate my forward gain is likey 18 dB, but I
> thought I'd better give a margin for error which is why I stated the
> above range in my first post.

Guestimate? Have you modeled your antenna with any reasonable
modeling program? The NEC based programs are fairly accurate and
would likely show you that any such differences in a quad versus
yagi are negligible.

> I don't know which newsgroup you read this in but after this I won't

The appropriate newsgroup would either be rec.radio.swap (if you are
indeed "selling" these "plans"), or rec.radio.amateur.antenna if you
are posting the designs.

73,
Todd
N9MWB

PS I love quads and feel they are great antennas for beginners and
for simple construction projects. I'm also a realist and don't
want to see others mislead by inappropriate "guestimates".

PPS Do you think you could make your signature file longer? :-(

(1) a copy of your US amateur license
(2) if possible, a copy of the receipts for your gear. Not necessary,
but can save some possible problems at customs.
(3) you'll have to sign your callsign/ VE (whatever Canadian call area
you are in) IE. If you are in Ontario, you'd be KB0GQ portable VE3
(4) A Canadian band plan. Although they share a great deal in common
with the US, they have some differences in their HF and VHF/UHF
allocations.

You don't need any special permits, just your radio(s), etc Have fun

>I'm traveling to Canada in the near future. Anyone know what I need to
>do to be able to operate in Canada with a U.S. License?

Assuming that you're a U.S. citizen, about the only thing required is
that you be licensed as a U.S. ham (assumed you are because of
your callsign) and that you identify properly, i.e. you identify with
your callsign and then identify with the prefix for the province
(as for example if you're in Ontario, you would identify as KB0GQ
mobile VE3 or portable VE3, depending on whether you were mobile
or portable if you're in motion in a vehicle or walking around outside,
you're mobile, if you're inside a fixed structure, or campsite you're
portable about the only research you have to do is figuring out which
prefix goes with each province) or territory of Canada you're in.
You cannot exceed your U.S. privileges,
and you also have to abide by rules affecting Amateurs in Canada. For
the most part, if you just behave properly, you have no worries. Oh yes,
one important point, you must also during each QSO or series of
exchanges identify the city and province/territory you're in, or indicate
for example that you're mobile VE2 12 miles south of Montreal if you
were in Quebec let's say. That's it. Carry your ham license and have
fun.

This occurs because there is a treaty between Canada and the U.S.
which allows such operation for licensed nationals of the other country
to do so. Canadian amateurs have similar privileges in the United States
except if they also have U.S. amateur licenses in which case, it's a
moot point anyway. 73 de n8blk/W3

>> Those anon emails also caused you to lose your ISP. At least Burt,

>No, I didn't do any anon e-mails.

We would expect you to deny them. But I'm surprised to see you denying
the anon articles - remember the names you called Burt?

Regarding the 147.435 rptr, you admitted you didn't own it, remember?
You stated someone else actually owns the equipment.

Let's talk about something radio related. What have you built lately?
Running any homebrew gear on the air? Do any 160m work? If so, what
are you using for an antenna? What's the conductivity of your soil
there in Portland?

Want to play a game of chess via email?

SB QST @ ARL $ARLB039
ARLB039 ARRL Board supports ham spectrum protections, band plans, VE
rules changes

ZCZC AG39
QST de W1AW
ARRL Bulletin 39 ARLB039
From ARRL Headquarters
Newington CT July 21, 1997
To all radio amateurs

SB QST ARL ARLB039
ARLB039 ARRL Board supports ham spectrum protections, band plans, VE
rules changes

The ARRL Board of Directors has resolved to support legislation that would provide statutory protections for ham radio frequencies. The action came as the Board met July 18 and 19 in Rocky Hill, Connecticut. In taking this action, the Board cited the potential threat to Amateur Radio bands from the federal policy of selling spectrum to the highest bidder.

In a separate action, the Board voted to seek primary Amateur Service allocations of 5650 to 5725 MHz and 5825 to 5850 MHz in the 5650 to 5925 MHz band that is now a secondary allocation.

Voluntary band plans would be referenced in the FCC's rules under another Board action. Noting the erosion in the level of compliance with the various band plans, the Board voted to petition the FCC to amend the amateur rules to state that hams ''should be familiar with, and should abide by'' voluntary band plans that apply to the frequencies they use.

In another action, the Board voted to volunteer the League's services as a special event call sign common data base coordinator. The Board approved a motion to submit a request in response to a recent FCC invitation. The request will ''express the League's interest in serving as a special event call sign coordinator at no cost to the applicants.'' The League would cooperate with other groups or individuals the FCC might select to serve as coordinators. Among other things, the League would work with them to develop common guidelines to govern the reservation of special event call signs.

Under a new policy approved by the board, ARRL Volunteer Examiners will not administer exam elements for which they have received

credit on the basis of a medical exemption. The Board also proposed changes in the FCC's Volunteer Examiner rules to require that applicants attempt an accommodated Morse code exam before seeking a medical exemption, and to ensure that medical information supporting an exemption is on file before the application for exemption is forwarded to the FCC.

Noting that no clear consensus has emerged in the wake of suggestions to restructure the Amateur Radio licensing system, the Board voted to extend the period for member comments. At its January meeting, the Board had received a committee report that offered several suggestions to revamp the amateur licensing system. Until further notice, members may continue to direct comments on restructuring to their ARRL directors. The Board plans to revisit the issue at a later date.

In other action, the Board:

approved a change in Field Day rules to add non-CW digital modes as a separate mode.

called for the convening of an industry standards conference to explore adoption of common interconnection standards for Amateur Radio equipment. The Board said that adoption of common standards ''would reduce the cost and complexity of Amateur radio stations.''

authorized President Rod Stafford, KB6ZV, to appoint an exploratory committee to determine the best way for the ARRL to pursue the development of endowment funds to maintain certain essential ARRL activities ''despite budgetary pressures.''

directed the introduction of a program to coordinate a nationwide effort to enlist local volunteers from ARRL-affiliated and special service clubs ''to introduce young people to technology through Amateur Radio and to potential careers in technology.'' In approving the resolution, the Board cited the increasing importance of technological literacy and President Clinton's call for greater volunteer efforts on behalf of youth.

approved the addition of a system of technical awards to recognize achievement in technical service, innovation, and microwave development.

voted to have the Volunteer Resources Committee review the duties and responsibilities of the State Government Liaison and consider renaming the position.

hi, forgot to mention i am running 100 watts into a 133ft dipole fed
with 450 ohm ladder line. someone recommended that i get a G5RV and
modify it for 160, saying the ladder line was the root of the problem.
Wouldn't the matching section on the G5RV suffer from the same problem
as the ladder line? also, would switching to an antenna with coax
feedline help to solve the problem? thanks

ARLB040 Board announces award winners

ZCZC AG40
QST de W1AW
ARRL Bulletin 40 ARLB040
From ARRL Headquarters
Newington CT July 21, 1997
To all radio amateurs

SB QST ARL ARLB040
ARLB040 Board announces award winner

Zachary Manganello, KB1BMG, of Cumberland, Maine, is the winner of the 1996 Hiram Percy Maxim Award. The ARRL Board of Directors approved the award at its recent meeting July 18 and 19 in Rocky Hill, Connecticut. The Maxim award is given annually to the licensed radio amateur under age 21 whose accomplishments and contributions are of the most exemplary nature within the framework of Amateur Radio activities. The winner receives a 1000 dollar(s) award and an engraved plaque.

In other action, the Board chose L. James Biddle, WB3DCL, of Newtown Square, Pennsylvania, and Beverly Priest, N8VZV, of Dayton, Ohio, as joint recipients of the Philip J. McGan Silver Antenna Award. The award recognizes public service contributions, and the Board took the occasion to thank all amateurs engaged in public relations efforts on behalf of Amateur Radio.

The Board also selected Bill Carver, K6OLG, of Twin Falls, Idaho, as the recipient of the ARRL Technical Excellence Award for his article, ''A High Performance AGC/IF Subsystem,'' which appeared in May 1996 QST.

The Board also named Eric J. Lagerstrom, KN6FR, of Seaside, California, as the recipient of the Herb S. Brier Instructor of the Year Award for 1996, and Bruce D. Weaver, K3LTM, of Knoxville, Pennsylvania, as the recipient of the Professional Educator of the Year Award for 1996.

And, Sam Brown, WA4IUM, of Knoxville, Tennessee, was tapped by the Board to receive the first ARRL Media Excellence Award. In making the award, the Board cited Brown's distinguished career as a professional television news anchor and his ''outstanding success'' and long-term commitment to promoting Amateur Radio on television.

ADMS-1C & FT-50R
When I bought my FT-51R I bought the ADMS-1 programmer. It came with
FT-11/41/51R programming software I recently purchased a FT-50R.

1) Does Yaesu send the update software for the FT-50R for free if you
already purchased an ADMS-1 or do I have to buy another one of these
things?

2) Is the FT-50R software similar to the FT-51R software ?

3) Can you buy the FT-50R software separately from Yaesu?

4) Does anyone want to trade an original copy of the FT-11/42/51R
software for an original copy of the FT-10/40/50R software?

Thanks!
Bob

From: master@lkdllink.net
Message-ID: <869621180.14240@dejanews.com>
Source record: 193053

I am ordering a couple of gmrs handheld radios to be used on hunting and fishing expeditions. My question has to do with applying for a license, I downloaded the proper form from the fcc and it seems to have very few questions pertaining to a mobile only situation. The form says if it is not filled out correctly the license may be denied. Can anyone give me any advice on filling out this form?

Thanks in advance Wayne Johnson

---- Hi John -- yes - you can reliably and easily cover that distance
and much more.

To get started in Amateur Radio, a license is required -- see URL:
http://pw2.netcom.com/~ac6v/pageA.html#H

For used Ham Rigs see rec.radio.swap a few hundred will get u
started.

Good Luck

Oh, yes, it would work. Problem is, you have to actually DO it for it to work. I put Jim in my filter long ago. I still read Burt's stuff, because what he say occasionally makes sense, and he's not just a profane little twit.

>anyone should understand this Burt it should be you. You and Jim both
>rely heavily on this group. As you stated, you've been at this for 9
>years, much like Jim, this is your life.
>You can not and will not stop simply because someone ignores you, you
>just recycle some of your older posts filled with slanderous remarks
>about hams and re-stir the pot.

Wanna bet? If a packet falls on UseNet and nobody reads it, is it really there? If everyone who hates Burt (or anyone else) or doesn't like what they say, they should apply the kill filter. Problem solved. But you need guys like Burt and Jim as much as they need you, because attacking them is what gets your heart started every day. So you won't do what it takes to get them out of your life permanently.

>> But hams being what they are there is always
>> at least ONE person who will keep it going.
>
>Yes of course Burt, and you count on this for your own Usenet existance.

But it needn't involve you.

>What a brilliant observation Burt, hmmm, if I make a post and call hams
>names they respond? WOW this is REALLY GREAT, I've really found
>something here... Should keep me busy for at least 9 years.

Only if people respond to you. Of course, it's more work to get people to respond to substance than to baiting and trolling, so some folks take the lazy way out.

>> If you want to argue with someone like him think
>> of what it makes you.
>
>Seems to me you have responded to anything Jimmy has posted, whats it

>make YOU Burt?
>Ooops, sorry I forgot, your special Burt, not like the rest of us. When

You need a signal generator, distortion analyzer (or SINAD-der), a three port capacitive isolating coupler "T" , 20dB fixed attenuator, and 50 ohm load.

Install the capacitive coupler between the 50 Ohm load and Receiver Under Test (RUT) such that the 50 Ohm Load and the RUT are connected through the lossless branch of the "T". Next insert a modulated signal through the 20 dB attenuator to the capacitive branch of the "Iso T". Adjust the modulation to 60% of rated system deviation. Usually +/-3KHz for LMR FM. Adjust the signal generator to a high output to fully saturate the receiver. Apply the receiver output (deemphasized discriminator or speaker) to the distortion analyser and adjust for full scale (0dB) on the distortion analyzer with the filter disabled. Engage the filter, the distortion analyser and adjust the filter for a null , it should read a very low distortion and should be about -30db or greater down from 0. Now reduce the signal generator until the needle rises to -12dB. You have now calibrated the setup for 12dB SINAD.

Note the value of RF signal output from the RF generator in decibels.

Remove the 50 Ohm load and substitute an antenna placed in the normal vicinity of the noise source. Turn on the noise source and adjust the signal generator output (should need to be increased) until 12 dB SINAD is again attained.

Note the value of RF signal output from the RF generator in decibels.

Calculate the difference and therefore the increased signal in decibels required to attain 12dB SINAD in the presence of noise. That value is the desense. The receiver will need that very amount of additional signal to receive reliably when the noise source is present.

You will probably want to put the computer in various operating modes to determine the worst case scenario. This test will permit you to experiment with sheilding and antenna configurations that might improve the performance.

ISO-T hookup

One book that has lots of RX projects is:

`Radio Receiver Projects You can Build' by Davidson, Homer L.
Published: Tab Books () ISBN:0830641904

As for the theory you can't go too far wrong with any ARRL handbook you
can lay your hands on.

>I also have in my possesion about 25 feet (maybe more) of
>10 Base 2 Ethernet cable. It is shielded RG-58 Type 20 AWG cable.
>Should I try to strip the shielding and use the wire to build an
>antenna?

Heck no, it's much more useful as cable than wire. You can pick up
some wire anywhere (e.g. Radio Shack), make yourself a dipole and use
your coax to feed it. Again, you'll find it all in the ARRL handbook.

There's nothing like hearing signals on a receiver you've built
yourself (unless it's making a contact using a transmitter you've also
built yourself!)

Actually, I asked many ARES people to come on board because being very involved with ARES, I know these people well.

This effort has the support of many non-ARES people.

>The worst part is that these people have made their elected offical an
>enemy before ever trying to work with him. Could you imagine recall in
>less than 6 months term in office. Sure have a bunch of ego sensitive
>former appointees in NYC=LI

Visit the Web page, and you can see a copy of the letter returned to me by the USPS as "REFUSED". How do you work with someone who won't take your phone calls and returns your letters unopened and refused? I don't consider 25% into his term as being hasty, as you imply. Rather, the thought of the latter 75% being the same way is what caused us to act.

Oh, by the way, we are not FORMER appointees, as you (again) state. With the exception of the one who has resigned, we are all CURRENT appointees. Perhaps you did not carefully read the email I sent you on July 15 where I told you that. To refresh your memory, I'll quote from that email:

"On the contrary, I WAS reappointed. All of the cosignatories of the letter WERE reappointed. Some of the signers of the petition are NEW appointees. "

Of course, since you do not live in the Section, but rather in New Jersey, I expect that you don't know what is going on in New York City/Long Island. I suggest you comment on that which you are qualified to speak, since obviously your grasp on the fact of this matter is rather loose indeed.

I have to disagree here, it conveys a powerful message. These are exactly
the tatics used in countries where the people are supressed/opressed.

If the police don't want their conversations monitored, they can scramble
their transmissons, there are several methods of doing this. Either that or
figure out how to keep your rf from drifting over my antenna....

I think you'll find scrambling easier.

that used to be the case. Now you can only listen if its an
interferance source and just long enough to make out the cause. Laws
that protect spectrum from being recieved are really out in left field.
Maybe they should pass a law against hearing certain sounds or seeing
some colors?

>
>Thanks!
>

I had the FT-8000 (Which is an 8100 without the kit) Assuming both radios are in good working condition, it's really a matter of user preference, as to what style or whatever you want. The reciever in the TM-V7 is slightly better, at least than what my 8000 was. In the intermod department, one wasnt better than the other. Like I said, about the same.

MY experience however, with the 8000 has been with failures in the reciever circuitry. I am on my SECOND FT-8000, which has even been sent to Yaesu once already for repair, and they fixed one of the problems, CREATED another one, and didn't fix the second problem.

These were the two problems I had with the 8000-

The reciever would make popping noises at random intervals, even with the audio fully squelched and no antenna attached. Yaesu DID fix this problem they did not fix the problem I had with the reciever- the thing would pick up TONS of noise from extraneous sources, like if a car drove by, and the incoming signal was about S5-S7, the ignition noise would kill the signal off. I still hear a little noise on the TM-V7, but the noise wasn't nearly a bad as what the 8000 was doing.

HOWEVER- there was a point in time where the 8000 worked good, aside from the popping noise, for a period of about 2 months or so. During this time, the radio worked quite well....

I bought the TM-V7 because I liked the features, and at this point I was profusely sick of the 8000. I figured if I bought an 8100 Murphy would come back and strike me down again.....

Just my .02

: I've seen the petition started and it is truely an ARES appointees
: crying towel. Others having had prior viewings of it have also made the
: same comment. I wonder how many "electronic" signatures will go onto
: this list. Enough to verify only ARRL members only signing the petition.

As far as I know, all signatures on the petition will be real and obtained "in-the-flesh". An "ARES crying towel?". It may seem that way, since ARES activity in the NLI Section represents the most visible and most active segment of ARRL field/educational activity in the Section. Honestly, it is one thing when people get replaced through attrition, "retirement", resignation, but another out of spite or personal agenda.

: The worst part is that these people have made their elected offical an
: enemy before ever trying to work with him. Could you imagine recall in
: less than 6 months term in office. Sure have a bunch of ego sensitive
: former appointees in NYC=LI.

Easy to label people ego sensitive, isn't it? I read lots of postings on this newsgroup, and unless I know someone personally, I would never make a character assessment. I leave that for the louts and loudmouths who think they know better, yet are clueless.

I know the people involved, and I know they are NOT egotistical. Actually, they are amongst the hardest working, most caring volunteers I have ever known. Egotistical, you say? Manning communications for 24-hour stints. Waking up 4:00AM to get to a location extra early, time after time? Helping a lost child find a parent at a special event? Tirelessly, selflessly, undauntingly sacrificing hundreds of hours of personal and familial time to aid, assist, and provide for others? Egotistical you say? I say, shame on you!!! What is YOUR volunteer record? How are you qualified to cast aspersions on people you don't know and in a situation you are obviously not intimate with?

(By the way, my name appears at the end of this message...not just some "store-bought" callsign).

Well, the 8000/8100 IS less sensitive, and out of band the sensitivity
goes in fits and starts- I wouldnt be very surprised if the unit is
nearly DEAF up around the 1GHZ range.

Are the two questions you ask meant to be the same thing?

Receiver desensing, as I've commonly heard the term, is also known as
blocking. I take it to mean the degree to which strong in-band
signals will actually reduce the sensitivity of the receiver.

Measuring the effects of a laptop computer operating in close
proximity to 400 and 800 MHz radios is more a question of stray
radiation. Receiver performance has little to do with it. Laptop
shielding and antenna proximity has more to do with this problem.

Please elaborate...

A low-pass filter will not help in cases of interference to non-radio devices. The telephone is responding to the strong, local signal, which is mostly fundamental. Reducing the harmonics above 50 MHz will remove about 0.01% of the signal -- there would still be interference from the fundamental.

In most cases, you need to filter the the affected telephone. Here is a quick set of steps that is almost always successful:

If you have a known-good telephone (or one of the RFI-proof phones from Pro Distributors or TCE Labs), temporarily unplug every telephone and accessory device (answering machine, FAX, MODEM, etc.) and plug in the RFI-proof phone. If it works, the phone system and house wiring are okay.

Now, start plugging devices back in one at a time. If you have interference, filter the affected device. A filter on the phone line itself, right at the phone, is usually enough. (Radio Shack now sells phone line filters!) In some cases, you also need to filter the handset line with a handset-line filter (K-Com). If the phone or phone device has a connection to the AC line through a "wall cube" power supply, you will almost always need to filter it, too, by wrapping about 10 turns of the wire onto an FT-140-43 ferrite core, right where the wire connects to the telephone. Some phones require all 3 filters to work well.

Keep going, adding devices back onto the line, filtering as you go. If you are real lucky, you will get them all. If not, you may identify one device that is detecting the RF and putting it back on the line as audio.

If you are talking HF interference, the Radio Shack filter will work fine; it is designed to filter 3-30 MHz. Other filters sold by K-Com are designed for the AM broadcast band or VHF.

>Wouldn't the matching section on the G5RV suffer from the same problem
>as the ladder line? also, would switching to an antenna with coax
>feedline help to solve th

The problem you have isn't with your feedline. It's from the phones
so affected reacting improperly to RF near them. If you have the
same approximate field strength after changing antennas and/or
feedline, you're still going to have the same problems. I suggest that
instead of following advice like this, you read the FCC pamphlet on
telephone interference, (I believe the ARRL web site has a copy,
and I also think it's at http://www.fcc.gov but you really have to look
for
it). The phones are the problem, and there is little you can do to
ameliorate the problem other than one not transmitting, buying
phones which aren't sensitive to RF as much, or trying to find working
filters for the phones. Your neighbors probably wont believe that it's
the fault of their phones, but one can take certain models of phones
hook them up, and there will be no problem. You might want to buy
one of those phones, hook it up at your house to make sure it
works, and then take it next door and demonstrate that there is
no problem with that phone. That usually proves that the problem is
with the phone rather than your operating.

>Still the law is that you may listen but not in any way divulge to anyone >what you heard or use what you heard for unlawful purposes or personal >gain!

That is not what the Electronics and Communications Privacy Act as amended provides. It's plain illegal to listen to cellular conversations, cordless phone conversations, and to decipher communications which are "encrypted". The law is probably mosty unenforceable, but still exists. You are following what pertains to communications not protected by the ECPA, and there is a difference. The fact that millions of folks own equipment which will receive unencrypted cellular conversations didn't seem to bother congress, nor that cordless phone conversations can easily be heard on other receivers commonly available. Almost anyone with a television made with 82 vhf & uhf channels (2 -83) or just the uhf tuner can pick up cellular conversations. There must be literally millions of old televisions around that meet that qualification. Not only that but even with cellular frequencies blocked on scanners, unless they also have great design, image frequencies of the cellular frequencies can often be received.

<cracked@primenet.com> writes:

>
>Why not try a low-pass filter in your feedline before you buy a dozen
>filters?

Because a low pass filter won't solve his problem. He doesn't have
harmonics causing this problem, something connected to his phone
line is rectifying the rf and causing the problem. A low pass filter
may help if for example harmonics of his signals are reaching a
receiver tuned to a frequency above that where he is transmitting.
Phone lines however don't have rf receivers intentionally, and instead
something which is not supposed to respond to rf, is receiving and
either demodulating or being affected by the rf that he's using. This
is one of those situations where good amateur practice won't solve
the problem. Of course in the old days, one called up the local
phone company, and it was their problem. Lots of newer phones
are overly sensitive to rf at relatively weak levels near them. There is
even an FCC report detailing the problem, and the FCC declining to
do anything about it except state that the problems seems to be
caused by poor phone design as there were certain phones which
did not have the problem. Of course, one can also make the same
statement about most present day RFI problems, it's not harmonics
or spurious emissions causing the problem but rather something
reacting to rf which shouldn't.

35.885 is not an 80 meter frequency, but a frequency toward the
lower end of the old VHF low commercial and public service band.
Old antennas of this type are common. You have your decimal place
screwed up one place. You are mistaken it for 3.5885.

Steve

His problem is retification not harmonics. Low pass filters on the transmitter
are only effective for a limited number of TVI cases.

You'll need one on each phone but first, buy just one and see if it
works on one phone. If not, sometimes winding the phone cord around
a small ferrite rod or toroid core works better. Lots of times you
can find cores surplus for a low price. If you have a phone that uses
AC power you may need to wind its power cord around a core too.

Hi John,

Hams routinely communicate over distances much greater than 290
miles, and with modest equipment. Communications across continents
and oceans is a very everyday occurance. The cost can vary, depending
on the complexity of the equipment you purchase. Used equipment in
very good shape can frequently be purchased for $200 or less, some
amateurs build their own equipment, and of course some spend
thousands of dollars.

To get more information, point your web browser to the following web site:

"http://ourworld.compuserve.com/hompages/k0hb/startup.htm"

Best regards,

Hans

And that's exactly what we are going to do, scramble and encrypt. The
only problem with that is we will then be accused of being Nazi's again
because we are keeping secrets from the public.

The scanner hobbyist have two basic arguments for scanning:

1. They have a right to listen to police communications.

2. They must have the right to listen in so they can keep
track of police corruption and monitor government activity so the
the government doesn't abuse it's powers.

Now lets examine those arguments:

All rights are not defined in the Constitution and the right to listen
obviously is not in that document. Therefore we must now assume that it
falls into the area of an undefined right. Now undefined rights are
subject to restrictions and regulation for the good of all. If that were
not true then driving a car would be a right rather than a privilege.
Operating ham radio transmitters would be a right and not a privilege
subject to regulation and licensing

As far as monitoring government for corruption and abuse of power this
is ridiculous. Plots to enslave the people will not be hatched on a
police frequency. If they want to monitor government and in particular
police activity then they should review police radio logs and reports
just as the press does. This is the RIGHT of every citizen and they will
learn more about what happened than by listening to cryptic police

transmissions.

This all boils down to one fact in my mind when comes down to the scanner hobbyist. "It's exciting to listen to that car chase and I don't want to lose that ability". I understand that but we in law enforcement have to think about our own good. As times have changed and criminals are more vicious and sophisticated the ability to intercept our transmissions is being used against us. Furthermore much of what was once broadcast over the air on a routine basis is now restricted information.

I fully understand that outlawing scanners is not the answer, any more than outlawing guns does any good. What the scanner community wants however is the right to listen in on police frequencies no matter what we do.

Art is correct, but you will find that in many cases "proving" that the
problem is in their phones will not solve anything. Sad to say, most
people don't care if the problem is theirs -- it only shows up when YOU are
operating, so the problem must be YOU. The fine print on most consumer
electronics that says it cannot cause interferance and must accept
interferance is usually unread and not understood.

What can you do? Not much . . . it's not your problem, but you can buy
them interferance-free phones; you could limit the times of your
operations; you could ignore the problem. It all depends upon how well you
want to get along with your neighbors, and how good the relationship is
now. If it's good to start with, you might have a chance . . .

Sorry -- and good luck!

SB QST @ ARL $ARLB041
ARLB041 FCC puts priority on electronic applications

ZCZC AG41
QST de W1AW
ARRL Bulletin 41 ARLB041
From ARRL Headquarters
Newington CT July 22, 1997
To all radio amateurs

SB QST ARL ARLB041
ARLB041 FCC puts priority on electronic applications

When vanity call sign Gate 3 opens on August 6, 1997, the FCC will process electronic applications ahead of paper applications each day. Previously, the FCC did not distinguish in how it handled electronic and paper Form 610V applications. In recent months, the FCC has been receiving more electronic applications than paper applications. The FCC says it will process electronic applications, then paper applications received on any given day.

The FCC also has established a firm deadline for receipt of application fees to accompany electronic applications. After Gate 3 opens, fees for electronic applications must be received by the FCC's fiscal agent, Mellon Bank, within 10 days of the date of application or the application will be dismissed. The fee will remain at $30 for the ten-year term until September 15, 1997, when it will increase to $50 for the ten-year term.

Applicants can find the electronic Form 610V on the FCC's Web site at http://www.fcc.gov/wtb/amradsrv.html. Electronic applications require a Form 159 for any method of payment. Mail payments accompanying electronic applications to Federal Communications Commission, Box 358994, Pittsburgh, PA 15251-5994.

Paper applications require an FCC Form 159 if payment is by credit card or if the application package contains multiple applications being paid for with one check. Individual applications do not require a Form 159 if payment is by personal check or money order. Send paper applications containing payments to Federal Communications Commission, Box 358924, Pittsburgh, PA 15251-5924.

To avoid processing delays, applicants should make sure the information on their license is up to date. If you have changed your name or address, you must file Form 610 with the FCC to request

modification of your license to show the correct information. In the case of a club station, you must file Form 610B.

Gate 3 opens the vanity call sign program to Advanced class amateurs. The FCC has not said when it will open Gate 4, for General, Technician Plus, Technician and Novice class operators. For more information, call the FCC Consumer Information line at, 888-225-5322 (CALL FCC).

> mike

My recent experiences with the type of problem that you are having suggests the following:

- Forget the G5RV - it can produce some serious RF on the outer braid of the coax.

- Any system using "balanced" feedline has inherent advantages over others (along with some practical difficulties like tuner availability).

- If you are using a 133' antenna on 160 meters, then you've already invented the G5RV of the 160M world - Hi.

- My interference problems tend to be reduced by getting the antenna itself as far away from the house as possible. For example, my interference problems are far less with two dipoles that are way out in the pasture, whereas my over the house G5RV wrecks everything. Do you begin to sense that "overloading" may be the root of the problem?

My advice is to continue to work the problem elsewhere - the antenna and the feedline are not likely culprits

Am very interested in your progress - keep us posted.

These can be tough. Your RF is being rectified somewhere in the phone.
The
solution is to block RF from getting into the guts of the phone, but
sometimes
it's entering via the handset cord. Winding the phone cord a few turns
around
a ferite toroid near where the cord enters the phone will sometimes
block enough
RF to eliminate the problem. AT&T phone centers sell a Z100 RFI
suppressor for
about $15, it is a tiny dual winding RF choke with modular connectors.
Similar
suppressors are sold in QST.

I have observed that blocking the RF with a choke is much more effective
if
you give the RF a place to go. Phone wiring is usually four wires. If
the
house has a single phone line, two of those wires are not used.
Sometimes there
is a yellow wire that is already grounded, if not ground one of the
extgra wires that
is not involved in the phone line. Then use .01 bypass capacitors at
the modular
phone jacks to the grounded wire. This may be enough suppression by
itself if

the RFI is coming in the drop wire and it's cheap to try.

If the RF is getting in the handset cord, try winding part of the cord on a Toroid
at one or both ends.

It is illegal to open a phone and modify it inside. If you could get in I
would suggest bypass capacitors around the bridge rectifier that most of them use as part of the ring detector circuit.

The Telco will, if you can get them to help (remember it's really not their
problem, it's the crap circuitry in the phone that's not bypassed for RF)
put a 40BA capacitor assembly at the drop entrance, and 1542 inductors by
the modular jacks. These amount to exactly the same things I proposed above
so it's a waste to call them.

Here is a copy of a message that Tod, K0TO had received from another ARRL Director and forwarded to a number of hams in the ARRL Dakota Division. It sounds like the straight story.

73 from Lyle, K0LR

****

Well, aficionados, here's the real story behind the call being used in the movie "CONTACT." As told by Paul Harden, NA5N, of the National Radio Astronomy Observatory located in Soccoro, NM. Paul granted permission for me to post his comments here. Due to some noise hits, I corrected a few garbled characters. Paul is an avid QRPr; in part because listening for weak signals is connected with his job. Nothing validates QRP more so than communication in space. Would be very proud to own a QSL card that said,"Worked the Moon!", or "Worked Mars, 5 Watts!" Today someone is working Mars at just 17 watts. It's a neat hobby! Enjoy.....de AB7HI

---------- Forwarded message ----------
Date: Sun, 13 Jul 1997 11:56:10 -0600
From: Paul Harden <pharden@aoc.nrao.edu>
To: Low Power Amateur Radio Discussion <qrp-l@Lehigh.EDU>
Subject: CONTACT call sign W9GFZ

As many of you know, much of the movie CONTACT was filmed right here at the VLA observatory in Socorro, NM. And believe it or not, few of us have seen the movie yet, myself included. A bunch of us are going to Albuquerque after work next week to see it (~80 miles away).

The call sign recommended for the movie was made by us ... W9GFZ. This was the original call sign of Grote Reber, an ardent ham who did pioneering radio astronomy work in the 1930's and 1940's. Radio astronomy was "discovered" by telephone engineer Karl Jansky in 1932 while trying to find the source of HF noise... which turned out to be coming from near the constellation Sagittarius, now known to be the center of our galaxy. Grote Reber continued this research as an amateur, designing and building the first dish antenna in his back yard, and making the first radio map of the cellestial skies.

Grote Reber's original dish antenna now resides at our sister observatory in Green Bank, WVA. Grote is now quite elderly and lives in Tasmania. We approached him a few months ago to use his

historic call letters as the official call for the NRAO observatory club station, which he willingly granted. We were awarded W9GFZ a couple of months ago by the FCC to keep Grote Reber's legacy and experimenting spirit alive.

The director of CONTACT was a stickler for details, and latched onto the W9GFZ connection. Again, I have not yet seen the movie, but W9GFZ was the call supposed to be used. It may have come out W9GFO (as reported by one post) after Hollywood editing (or perhaps they didn't like the "Zed" sound on the end?).

The CONTACT Director modeled Jodie Foster's role after two very noted early radio astronomers ... Grote Reber (W9GFZ) and John Kraus (W8JK). Both of these men were hams at an early age, and their experience with HF communications enabled them both to realize that some of the signals they heard were NOT man made (i.e., noise/emissions from space). He thus modeled Jodie Foster's role after them ... to be a ham at an early age and her hamming experience would explain why she was the only person to recognize the signals received in CONTACT to be extraterrestrial. (She didn't spend much time around 7.040 though, did she?). It was also his way of explaining why a woman was the accomplished astronomer finding the signals ... based on her experience as a ham in her youth.

Maybe for QRP TTF this September, I'll operate the contest from the VLA observatory, antenna #8 (where they filmed CONTACT) using the calls W9GFZ/QRP. It'll be cheaper for me than another trip to Area 51 -hi.

ObQRP: Both Grote Rebers and John Kraus' first homebrew transmitters in the 1930's were less than 5 watts, as explained in John's book "Big Ear."

I have the V7A. It is a fabulous radio. Slick, smooth, and VERY
functional. Also,
completely remote controllable from any recent knwood dual band handi.
Personally, i don't think you can go wrong with either rig. The blue
display got me,
but the rig just works great on top of that....I second all the remarks
on the previous
post....Regards,,,Mark -ab4ye

Use the "boot to DOS" option at shutdown and change the c:\windows\dosstart.bat file to closly match your old c:\autoexec.bat file (i.e. all the sound blaster junk added) and it should work. Be sure you have the sound blaster stuff in the c:\config.sys file as well. Good Luck with Win95 (you'll need it) and the 20wpm too!!

Jeanne,

My son asked me to re-install Morse Academy this past Monday. I did the installation and set the options to use the Adlib card since it more closely matched the SoundBlaster. The version I loaded was bought in the summer of 1995, I think. The program worked immediately from a DOS window without having to reboot to a DOS mode. You may want to delete the copy on your Hard Drive, if installed there, and reload the software. The program has to build some calibration files the first time it is executed. Hope this helps, good luck!

Jim. I don't want to appear a pain but, there is still no URL either in blue or any other colour.

(NOT wanting to teach you to suck eggs, but...) You must remember that most of the users only have a 'normal' ASCCI text type of a news reader programme. They can't read hypertext messages (Like what you are posting in)
Many people use some form of 'Off Line Reader' (Like I do) not using Netscrape or Microsloth Explorer and have to download every message all in one go (mail or news)

I would like to have a look around your site, but unfortunatly it still eludes me. (I've got an Amiga Ham site link from my site, give us a link if you want?)

Feel free to post it here or send it to me direct. Thanks Jim.
(Post it in normal ASCCI text please!)

How many is "numerous"? Prior to the Novice license means prior to the 50s.
Our numbers were smaller then and bootleggers were much easier to hunt down
than today. If you go far enough back, the old FRC placed regional radio clubs
responsible for cleaning up the airwaves (which included tracking down any
bootleggers).

The code tests don't filter anyone out - it's obvious from listening to
certain HF freq'ys that even morons can learn the code! Where the "filter"
comes into play is plainly heard in the code segments of the bands - none
of the nonsense that we hear on SSB occures there.

>> Most hams with hf privileges don't regularly use cw even now, even
>> if theoretically they can.

Then who are all those folks on 80 and 40m CW in the evening? It's
difficult to find an unused freq'y to call CQ.

>Yet these are the hams that are whining that CW is needed as a filter.

It's not a filter - practically anyone can learn code.

On Tue, 22 Jul 1997 11:09:51 -0700, Patrick Lynd <patrickl@wco.com> wrote:

>All rights are not defined in the Constitution and the right to listen
>obviously is not in that document. Therefore we must now assume that it
>falls into the area of an undefined right. Now undefined rights are
>subject to restrictions and regulation for the good of all.

Once again, you seem to have this notion that "rights" are something
conveyed to the people by the government. This attitude is just plain wrong
(and is one think I think is indicative of the problems we have in the law
enforcement community today.) The government derives its powers from the
people -- people have certain inalienable rights (meaning you can't take them
away from people), and the government operates on the whim of the people.

Now, in regards to your final sentence, that "undefined rights" are subject
to restrictions and regulation, I have but one thing to say:
The Tenth Amendment. Learn it. Live it. Love it.

All powers not deligated to the federal government are reserved by the state.

>If that were
>not true then driving a car would be a right rather than a privilege.

You confuse privileges of interacting with society with the rights of
the citizenry. Privileges are not rights. I have the privilege of using the
town library, because I have shown I can be trusted to return the books I
borrow. I do not have the right to use the library; although I have the
right to read whatever I choose. My right to free speech does not entitle
me to an audience or a free soapbox, although I have the privilege of
using public facilities to exercise my rights as long as I act according to
socially-acceptable guidelines and do not infringe on the rights of others.

>Operating ham radio transmitters would be a right and not a privilege
>subject to regulation and licensing.

The federal government has an interest in regulating radio transmissions.
I say transmissions because the act of transmitting often crosses state
lines.

However, I would argue that the federal government has no interest in
regulating receipt of transmissions. Such a power is, by definition of
the tenth amendment, reserved for the states to regulate. Such interest
has ominous implications, and is one reason why I did not support the
"ban" of cellular-capable receivers.

You must understand that the underlying issue is not necessarily one of
being able to physically listen and understand what is being said on any

particular frequency, but the greater danger of having the government start to regulate what you can and cannot listen to, which is akin to censorship.

Now, if the operator of the equipment which transmits over the airwaves does not want the signal intercepted and comprehended, then the operator should take the necessary steps to encrypt and secure the transmission. Cell operators, for instance, should have installed digitally-encryptable radio equipment to provide their customers with privacy, not have the federal government attempt to restrict what you can listen to.

Some time ago (back in the 70's, I believe) there was a federal case (and maybe Phil Karn would know it, or someone with Nexus access could look it up) where a magazine publisher published (or was going to publish) an article on how to construct a nuclear bomb. The material in the article was obtained completely from non-classified sources -- basically, the everyday material you could find in a library with some research. The publisher was sued under the guise of national security, but the courts ruled in favor of the publisher, because the information was public.

There are technological solutions to prevent critical information from being heard by eavesdroppers. The solution to the problem with perps monitoring police frequencies with scanners is not a law that makes scanners with police frequencies illegal, but to use technology to solve the problem. Passing restrictive laws which infringe on the freedoms of many to protect against the few set a dangerous precident for creating more restrictive, more intrusive laws.

>As far as monitoring government for corruption and abuse of power this
>is ridiculous. Plots to enslave the people will not be hatched on a
>police frequency.

Tell this to Rodney King.

>If they want to monitor government and in particular
>police activity then they should review police radio logs and reports
>just as the press does.

Every member of the "press" I know has a police scanner handy so they can get to crime scenes ASAP and make the evening news. No sense in waiting until you have a chance to sugarcoat and spoonfeed everything.

>This is the RIGHT of every citizen and they will
>learn more about what happened than by listening to cryptic police
>transmissions.

You can learn more after the fact, yes, but reading the police reports, etc., is only a portion of the total picture. Live interaction is a necessity to ensure that the information you are providing is accurate. The people should never accept what the government tells them on blind faith. This is, after all, the same government that fed retarded people radioactive food to see what the effects would be.

>This all boils down to one fact in my mind when comes down to the
>scanner hobbyist. "It's exciting to listen to that car chase and I don't
>want to lose that ability". I understand that but we in law enforcement
>have to think about our own good. As times have changed and criminals
>are more vicious and sophisticated the ability to intercept our
>transmissions is being used against us. Furthermore much of what was
>once broadcast over the air on a routine basis is now restricted
>information.

Several points here:

1. If you are so concerned for your safety in law enforcement, you should be encrypting your transmissions. Your argument sounds like the typical Handgun Control, Inc. "solution" to gun crime -- "If we eliminate all the handguns, only cops will have guns". Yeah, right. What makes you think if you pass a scanner law that criminals are still not going to have scanners? Gun laws haven't stopped a huge black market for guns from appearing, has it? How hard do you think it will be for "black market" scanners to start appearing? Or, do you propose to attempt to remove the knowledge of how to build a scanner from society, in which case you'll also have to make it illegal to publish any information on how to build a scanner capable of receiving police frequencies?

2. Restricted information should not be transmitted over an unsecure channel. Unencrypted, "open air" transmissions are foolish. To solve your problem, implement a technological solution -- digitally encrypt your transmissions to prevent monitoring.

3. The scanner enthusiast isn't your enemy. The perp is. When you pass a law saying it is illegal to to own a scanner capable of receiving police freqs, the scanner enthusiast is hurt, but do you honestly believe the perp is going to give a shit what the law sez? "Oh, I was going to rob that bank and bring my police scanner with me, but police scanners are illegal, so I better leave it at home". Uh-huh.

>I fully understand that outlawing scanners is not the answer, any more
>than outlawing guns does any good. What the scanner community wants
>however is the right to listen in on police frequencies no matter what
>we do.

There is some validity to your point here, and I understand both sides. There is no solution to the "right to listen" issue. There is a technological solution, however, to preventing people from listening, without creating another "ban".

Unfortuntely, the cell ban has set the precident for this type of law to pass. Once public safety frequencies are "banned", what frequencies will be the next ones to be "banned" from scanners? Heck, why not just ban scanners altogether? Nobody needs to listen to anyone's "private" conversations over the air anyway.

>icom 735, then he would plug in a Emperor ts-5010 ten meter, and almost NO
>NOISE!!!

Noise blankers are always a compromise. The more effective they are on impulse noise, the worse they make the radio in terms of strong signal handling, IE third order intercept, undesired mixing products, etc. In recent years, amateur manufacturers have responded to calls by amateurs (primarily Dxers and contesters) for radios with greater strong signal handling ability. To provide that, they've had to reduce the effectiveness of their noise blankers.

CBs, and CB derived radios, tend to use very aggressive noise blankers, but they pay a cost for that in terms of reduced third order intercept and poor IMD response. That typically doesn't bother CBers since they generally don't try to pull out weak signals next to a collection of very strong signals. Dxers do.

Ideally, a noise blanker should be dynamically adaptive to deal with varying signal environments, but few are (the exceptions are primarily very expensive commerical and military receivers). Some amateur radios do provide a front panel adjustment to allow the operator to tailor the NB response to suit the signal conditions of the moment, but most don't because shrinking radio size has put panel space at a premium.

This is actually a very hard problem. Trying to combine good strong signal handling with an effective noise blanker requires the circuit to distinguish reliably between RF impulses which have very similar characteristics. The voice peaks from a strong AM or SSB transmitter have characteristics similar to those of impulse noise. You want the circuit to suppress impulse noise, but you don't want it to respond to signal peaks because that causes very severe distortion in the receiver.

You really need some type of correlator to reliably identify the different impulse sources so you can suppress the ones due to noise and let pass the ones due to the signal. That's not easy to do at the high IF of today's typical HF amateur receiver. Direct I/Q receivers may help in that we'll be able to do the processing at baseband where we can implement strong correlators fairly inexpensively.

Does the radio say "LOC" on the display where frequency would normally
be displayed? If it does then the radio as to have a code entered into
it using the Pre-Sets. It sounds like you have a later model radio in
that vehicle. The only way you can get the code to enter into the radio
is by contacting your selling dealer.

1588. Audio DSP units?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-23 00:00:00 UTC
From: n8blk@aol.com
Message-ID: <19970723041901.AAA01237@ladder01.news.aol.com>
Source record: 193063

I wonder if anyone knows of some way of rating the three common
DSP units from Timewave, MFJ and JIR, I believe. I've seen reviews of
all three, but the reviews don't really offer any means of comparing
among the three. For example, which is best at producing the best
cw signal, which is best at dealing with atmosperic noise, line
noise, which is best with digital signals like pactor, amtor and
rtty? Which comes closest to offering real selectivity with ssb?
Which deals best with other types of noise. All of them seem able
to notch out single frequencies, or enhance single frequencies, but
which is best for general use by a ham, which is best for digital usage,
and which is best for let's say to be obtuse CW?

Obviously, I'm thinking of buying one, but which one? Yes, I know
they aren't perfect, and they aren't really as effective as filters at
IF frequencies, but they must be of some use to a few hams.

In article <33D5273E.5F02@lni.net>, dclark <dclark@lni.net> writes:

>Bet we won't see "any" unlicensed bootleggers on "CW", EH! 73 ki8ag

While folks love to proclaim cw as a filter, I point out that before there were novice licenses or tech licenses with hf privileges, code tapes, and computer programs to teach code, numerous now old timers got on the air, "adopted" a call, and got to learn code that way. They were plain and simple bootleggers, even if they did go on to become hams.

Most hams with hf privileges don't regularly use cw even now, even if theoretically they can. I wouldn't use cw at all if I didn't have a habit
of building qrp rigs, and trying them out for a while, and I do more cw than most hams I know.

The problem cited for bootleggers probably won't become a real problem if just because vhf/uhf gear while relatively cheap also requires an infrastructure to support it. Let's be honest without repeaters, hand held transceivers just aren't normally useful except to people relatively close by. Most of the interference problems that I've seen resolved, have been caused by already licensed hams. I hate to point out that control ops can easily turn off a repeater if there is no legal id, or with transmitter fingerprinting, an even easier technique is to only key up when there is no control operator if the fingerprint fits a known user. CW isn't a good filter, and frankly if it were seen as exciting stuff to do, it too would face problems with bootleggers.

How about the Amateur radio hobbyist whose radio is type accepted as a scanning receiver. Most amateur receivers that operate above 30 MHz are considered scanning receivers by the FCC. These radios will also fall directly under the same restrictions. Yes the manufacturers can finally build an amateur band only radio. But seeing the many requests for " MODS " here in this newsgroup are many willing to give up the out of band ability up easily ? How about MARS and CAP modifiable radios, they likely may be a thing of the past also. This bill not only assists protecting the right of privacy for commercial users but may affect some other operations many take for granted now.

Should prove to be interesting if passed into law.

Yet these are the hams that are whining that CW is needed as a filter.
Then there are others using memory keyers/ computers for sending &
receiving CW that also claim CW is needed as a filter. GO FIGURE!

I am positively dumbfounded by this proposal. It appears to me that if Part 97 were amended as proposed, one could be found in violation of the rules for failing to adhere to an ARRL band plan. While different people deem it appropriate for the ARRL to fill a variety of different roles, I would argue that frequency regulation is definitely beyond any reasonable definition of the League's role.

I'd be very interested to know *why* compliance with the band plans is eroding. From what I read in this forum, and from discussion with other hams both on and off the air, I suspect the likely explanation is that the existing band plans do not sufficiently accommodate the needs of the various interest groups within the amateur community. This is most apparent in heavily populated areas, where bandwidth is at a premium, which begs the question of whether or not uniform national band plans aren't doomed to failure from the very start.

Admittedly, as the amateur community becomes more and more factionalized into smaller groups of operators with passionate interests in numerous different modes of operation, it is becoming increasingly difficult to maintain harmony in the ranks. Whatever the solution, however, allowing ARRL band plans to carry the weight of law will only serve to increase the disharmony that already exists.

If you are planning to study for Novice or Tech. then my Shareware
NuTest for Windows program might be useful. The package includes the
new Novice/Tech as well as all other classes. Other info in the package
includes the FCC Part 97 rules and the new RF exposure data/charts for
the new exam questions.

If you are studying for Novice then this program will cost you nothing!
Tech would require registration for the small fee of $14.95.

Visit my site at:

http://ourworld.compuserve.com/homepages/Tony_Lacy

To download NuTest and other goodies.

This is not such a radical move. Part 97 already recognizes
Frequency Coordinators, and they are far less representative and
accountable than the ARRL.

I'm not sure what the word SHOULD means in these proposed rules. Is
it the same as MUST or something weaker? At present the word MUST
appears many times in the Commission's Rules and its meaning is
crystal clear. On the other hand the word SHOULD appears just one
time, and that is in a passage about an optional request that may be
made to the EIC of an FCC Field Facility on some matter. Better no
rule than one which is vague and open to different interpretations.

Hi, Todd,

In any case where you feel that the ARRL Board would benefit from your input, make your views known to your ARRL Division Director! You can find their postal addresses, telephone numbers and email addresses in QST magazine or on the ARRL Web page.

I will personally add a bit to this discussion: Most of the band plans were developed by various ARRL committees. These committees consist of a wide spectrum of volunteers, appointed by the ARRL Board. In most cases, the "representation" on these committees is regional. The ARRL Board did approve the final version of all band plans. In addition, ARRL has not represented the VHF and up band plans as being national in scope. To quote the Repeater Directory: "Please note that the listed bandplans are ARRL bandplans. Spectrum usage can be different depending on local and regional coordination differences. Pleas check with your regional frequency coordinator for information."

And elsewhere in the Directory:

"The ARRL supports regional frequency coordination efforts by amateur groups. Band plans published in the ARRL Repeater Directory are recommendations based on a concensus as to good amateur operating practice on a nationwide basis. In some cases, however, local conditions may dictate a variation from the national band plan. In these cases, the written determination of the regional frequency coordinating body shall prevail and be considered good amateur operating practice in that

region."

I do note that the proposal by the ARRL Board included no mention of ARRL band plans. In fact, the word "various" was included. IMHO, this included any regional bandplan in effect.

>I'd be very interested to know *why* compliance with the band plans is >eroding. From what I read in this forum, and from discussion with other >hams both on and off the air, I suspect the likely explanation is that >the existing band plans do not sufficiently accommodate the needs of the >various interest groups within the amateur community. and plans >aren't doomed to failure from the very start.

There are a lot of reasons that compliance is eroding. They certainly include the reasons you suggest, although if one is following the band plan of the region, one would be presumed to be operating under good amateur operating practice. Much of the deviation is probably caused by either ignorance -- someone buys an HT whose default power-on frequency is 144.200 and starts using FM there, or by intent, some benign (the day my SSB rig went on the fritz when I was on a hilltop to work W1VT on 10 GHz, I used my HT to reach Zack on the SSB liaison frequency, or disruptive, as in the fellows who choose to have an FM QSO in 144.200 because the rules permit it.

>Admittedly, as the amateur community becomes more and more factionalized >into smaller groups of operators with passionate interests in numerous >different modes of operation, it is becoming increasingly difficult to >maintain harmony in the ranks. Whatever the solution, however, allowing >ARRL band plans to carry the weight of law will only serve to increase >the disharmony that already exists.

IMHO, the proposal is not intended to give any additional weight to the ARRL band plans, specifically. It is intended to give some additional weight to band plans in general. This topic is still worthy of discussion, but this discussion can be in a broader context than ARRL's recommended band plans.

Hi!

I read in one of the Ham newsgroups a short while back some tidbits about the call signs used in the movie "Contact". I am putting together an article for our local club newsletter, and I thought that it would be an interesting inclusion. Can someone point me in the right direction?

Specifically, I am looking for the actual calls used, as well as the names and backgrounds of those who hold the call signs. I understand that one of the calls belong to an astronomer or some such.

Any information or pointers would be GREATLY appreciated!

Thanks!

Be careful. Just the othe rnight I was playing around with my 706 when I hear what sounded like scrambling on 43Mhz(new cordless phone band) and it sound like junk, decided to try something went to SSB and I could make out it all out! Go figure.(Not true SSB) but it was enough to understand. I have a Sony 900Mhz Digital. It's a true Digital phone, not scrambling or encyption. Plus there are 65,000 digital signature codes for the headset and base. For the price I got it for it's a deal.

Sorry, I don't remember the calls used, although it was interesting
that they were correct in principle for the period - that is one
was W9???, not K9 or WB9 or N9 or any later prefix.

I wondered whether the movie was really helped by not making
the calling more realistic. CQ was ok, but why not "W9???
standing by for any call", or "W9??? listening for any call"
and so on?

Most unrealistic, but understandable, was the dead air,
with just QRN, when noone answered!

Modern hams may not know that in the days of crystal
control, it was unusual ever to be called back on the
frequency you were transmitting on, so that a CQ had to
be followed by a scan of the whole band. This also
accounts for the looong CQ's and calls that some of
us old timers are prone to.

I have eliminated rf problems by putting .01 caps from EACH SIDE of the
phone line to ground. It does not work to put the cap across the line.
I do this at the incoming box first, then if that doesn't get it, I do
it at the phone jack. Sometimes it's hard to find a ground at that
point.

1604. Doppler indicator & LCD for MicroMint Controller

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-23 00:00:00 UTC
From: "Lawrence R. Brandt" <Lawrence_R_Brandt@ssb.com>
Message-ID: <33D64820.A7374616@ssb.com>
Source record: 193079
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.digital.misc,rec.radio.amateur.misc
Body handling: HTML body converted to readable text

Hi All,

I have 2 questions. First is does anyone have a circuit to attach to a Roanoke

Doppler design and add digital bearing info? I could just fudge the 4 bit output

to read multiples of 22.5 degrees, but that does not add any accuracy.

Basically what I want is a circuit that can judge the time between when

a trailing pulse is detected and another event (oneshot firing) occurs. Then

take this number and display it as a 0-360 degree display. But I realize to

do this I will need to know when the period is over, when the 360 mark has been

reached. As I sit here thinking about this, I may have an answer but need some

help making it work!

I will need a clock that can count from 0 to 359 in a certain period

defined by a "start counting" trigger and a "latch & display" trigger.

In the doppler, this could be the zero crossing point of the tone (as start)

and the firing of the oneshot to enable the display. I'd need to include a

calibration pot to vary the clock period, so that there are 360 clocks between

zero crossings. If the doppler clock were a multiple of 360 and not 22.5, this

would be easier! (& with appropriate output and/or display logic)

But has anyone seen such a circut for a Roanoke doppler? There is a company

around that sells a unit with a display like this, but how does it work?

(I'd like the output to use an LCD display, if possible)

Second question:

If I have the above bearing as a number between 0 and 359, and my GPS

is outputting RS232 data for my current position & heading, is there a simple

circuit to:

Decode the RS232 current bearing info (16550/8250 UART, I assume),

Aquire the doppler's relative bearing info (serial or parallel),

Display a resutant bearing that is relative to true north (which the GPS is).

I have an original MicroMint BASIC-52 controller card with serial, parallel &

terminal outputs, so a program to do this would be easy to do, but could a dedicated

chip or small circuit do the same thing?

BTW, does anyone have info for interfacing a LCD display (small one, 2X16 for example)

to these Micromint controllers? I've seen a few aritcles but not the one I'm looking for.

I'd use this controller as a DF caluclator to get the true bearing, have a switch to "read" this bearing and save it to use in triangulation calulations, perhaps weighted by a "quality" measurement for the bearing. I'm working on the program for the triangulation and target

location but I'll need a small display (RS has one but I'd need details!)

Thanks for hanging in there!

Thanks & 73s,

Larry "Hello officer, its a qubical quad for direction finding, is there a problem?!" Brandt

Here's a site with ALL the questions, new and old with nov, tech, general, -> extra.
and you can even take randomly generated exams!
Helped me pass the novice and tech this past saturday.

http://w5ac.tamu.edu/ham-exam-v2

The Sonoma County Radio Amateurs will be heading to Alcatraz Island THIS
WEEKEND!!! We're going to be spending Saturday night there and will be
operating Saturday and Sunday (and a few die hards who didn't get enough
from field day this year will be burning the midnight oil...)

We will be offering a certificate (or perhaps just a special QSL card...
We haven't
yet decided) for making a contact with us. You must send a SASE, however,
so we
can get the goods back to you!

For more information, please go to the SCRA Web site at
http://cds1.net/scra
You can also visit the Alcatraz specific page at
http://cds1.net/alcatraz.shtml
to get all the info and the frequencies we will be working. Aside from
20m, we
will be operating CW in the novice subbands. We will also be operating
voice.
Check the pages for the frequencies.

Hope to make contact with you.

73,
Ken

1609. CW program for windows 95 and soundblaster

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-23 00:00:00 UTC
From: Jeanne Pitz <jpitz@ti.com>
Message-ID: <33D64918.5F92@ti.com>
Source record: 193084

I upgraded my PC to windows 95 and now morse academy
doesn't work anymore :-(.

Has anyone else gotten MA to work under windows 95
or have another suggestion
for a similar program that I can generate morse code
tests and runs under windows 95 and can use the
sound blaster card.

MA was the only program I could use my sound blaster
on with windows for work groups. I tried supermorse 4.15
but it doesn't recognize my sound blaster since it is on
an alt interrupt.

Any help would be appreciated. I am studing for 20 wpm
test.
Thanks.

Grand Opening of Amateur Radio Exhibit and Permanent Radio Station at the Museum of Science & Technology (MOST) in Syracuse, NY.

Operating under the W2CM callsign of the Liverpool Amateur Repeater Club, this station will operate from MOST from 2100Z to 0200Z on Friday July25th, and from 1500Z to 2200Z on Saturday July 26th. Amateurs who will be in the Syracuse, NY vicinity on these dates and times are encouraged to visit the Museum and observe the station and the special activities that will be taking place. Operating frequencies will be 7.030, 14.030, 14.240, 21.350 and 28.325 MHz +/- QRM. A special QSL card will be sent to stations working W2CM during this event. QSL requests should be sent to: Museum of Science & Technology, 500 S. Franklin St., Syracuse, NY 13202. After the special event concludes, amateurs should check with the museum to determine the hours the exhibit will be open on any particular date. Event coordinator is Kevin Shannon-WA2ISC, 315-699-2147.

Agreed. Also, it bothered me a little bit on how a 9 year old was issued the W9 call, but then that's nit-picking.... also, maybe vanity call rules could have been involved.

Actually, it was W9GFO. That call is currently unissued, though it is in
an old printed copy of the Callbook.

I forgot the W4 station's callsign that was on the "other end" of the
conversation.

1616. VX-1R Experience/Question

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-23 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <33d774a1.108748642@nntp.atlanta.com>
Source record: 193091

Hello.

I've just bought a shiny new VX-1R, and so far I like it (in spite of the problems about scanning only within the current band, and a memory being committed to a band once written to).

I've done the mod, but to my dismay, found that I can't transmit in the 222-225 (ACT-1) band. Has anyone else had this experience? I see that I can key the radio from 128 (haven't checked any lower) to 221.999. But from 222 to 299.999, no transmit.

I bridged pads 0 and 1, did a hard reset of the radio (AR + M/V + PWR, then the F key). I've got firmware A105.

Any thoughts? (postings appreciated, e-mail preferred).

I don't recall the details; the topic was covered extensively on the
Collins reflector. I am enclosing a copy of one of the more informative
posts on the subject which, I think, should get you a good start. The
thread was started because the equipment the girl was using was S-Line; a
friend told me he'd seen it and has seen my station and said it was the
same, so I posted the question to see if anyone else had seen the movie
and had noticed what kind of gear was displayed...it got a long thread
started...buncha people were mad because it was "off topic"...anyway,
here's the post that I thought summed it up pretty well:

Well, aficionados, here's the real story behind the call being
used in the movie "CONTACT." As told by Paul Harden, NA5N, of
the National Radio Astronomy Observatory located in Soccoro, NM.
Paul granted permission for me to post his comments here. Due
to some noise hits, I corrected a few garbled characters. Paul
is an avid QRPr; in part because listening for weak signals is
connected with his job. Nothing validates QRP more so than

communication in space. Would be very proud to own a QSL card
that said,"Worked the Moon!", or "Worked Mars, 5 Watts!" Today
someone is working Mars at just 17 watts. It's a neat hobby!
Enjoy.....de AB7HI

---------- Forwarded message ----------
Date: Sun, 13 Jul 1997 11:56:10 -0600
From: Paul Harden <pharden@aoc.nrao.edu>
To: Low Power Amateur Radio Discussion <qrp-l@Lehigh.EDU>
Subject: CONTACT call sign W9GFZ

As many of you know, much of the movie CONTACT was filmed right
here at the VLA observatory in Socorro, NM. And believe it
or not, few of us have seen the movie yet, myself included.
A bunch of us are going to Albuquerque after work next week
to see it (~80 miles away).

The call sign recommended for the movie was made by us ... W9GFZ.
This was the original call sign of Grote Reber, an ardent ham who
did pioneering radio astronomy work in the 1930's and 1940's.
Radio astronomy was "discovered" by telephone engineer
Karl Jansky in 1932 while trying to find the source of HF noise...
which turned out to be coming from near the constellation Sagittarius,
now known to be the center of our galaxy. Grote Reber continued
this research as an amateur, designing and building the first
dish antenna in his back yard, and making the first radio map of
the cellestial skies.

Grote Reber's original dish antenna now resides at our sister
observatory in Green Bank, WVA. Grote is now quite elderly and
lives in Tasmania. We approached him a few months ago to use his
historic call letters as the official call for the NRAO observatory
club station, which he willingly granted. We were awarded W9GFZ a
couple of months ago by the FCC to keep Grote Reber's legacy and
experimenting spirit alive.

The director of CONTACT was a stickler for details, and latched
onto the W9GFZ connection. Again, I have not yet seen the movie,
but W9GFZ was the call supposed to be used. It may have come out
W9GFO (as reported by one post) after Hollywood editing (or perhaps
they didn't like the "Zed" sound on the end?).

The CONTACT Director modeled Jodie Fosters role after two very noted
early radio astronomers ... Grote Reber (W9GFZ) and John Kraus (W8JK).
Both of these men were hams at an early age, and their experience
with HF communications enabled them both to realize that some of
the signals they heard were NOT man made (i.e., noise/emissions from
space). He thus modeled Jodie Fosters role after them ... to be a
ham at an early age and her hamming experience would explain why she
was the only person to recognize the signals received in CONTACT to
be extraterrestrial. (She didn't spend much time around 7.040 though,
did she?). It was also his way of explaining why a woman was the

accomplished astronomer finding the signals ... based on her
experience as a ham in her youth.

Maybe for QRP TTF this September, I'll operate the contest from
the VLA observatory, antenna #8 (where they filmed CONTACT) using
the calls W9GFZ/QRP. It'll be cheaper for me than another trip
to Area 51 -hi.

ObQRP: Both Grote Rebers and John Kraus' first homebrew transmitters
in the 1930's were less than 5 watts, as explained in John's book
"Big Ear."

I can't answer your question Gary because I don't know. I can state that I'm a ham also and know how to modify my radios to work on my own police channels but it's against the law so I don't even though I can go right out to my patrol car in the driveway and use that radio. These laws are screwy and that's the problem when politicians get involved. They should let the experts write the laws and just vote on them.

Thank you for taking the time to reply. However perhaps I need to explain what "intrinsic safety" means for my purposes. I does not mean voice security. I need a radio (the handset on the cordless phone is a radio) that meets Factory Mutual intrinsic safety requirements for use in hazardous areas. In this case the phone would be carried by a person working in a fuel storage area at an airport. The phone cannot be a source of ignition in this hazardous area.

I don't know if anyone makes a phone that has "FM" certification. I posted this question in a couple of other groups that might be appropriate. I posted it here becasue I know many hams also work in the radio/communications business and might know of a source for such equipment.

But again, thanks for taking the time to reply.

Hello everyone,

I finally found some amateur radio related news groups thanks to a
friend of mine. Id like to call your attention to the latest and (I hope
soon one of) the greatest amateur radio websites on the net.

My site is still under cunstruction but the primary structure and basic
links are there. More links and content will be added every couple days
as my time allows and I locate more links.

This site is at http:/www.qsl.net/kc8aco and a big thanks to Al, K3TKJ
at http://www.qsl.net/ for providing space for my pages.

73's to all and happy browsing.

1622. Yaesu VX-1R Mods???HELP

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-24 00:00:00 UTC
From: Luke Turner <ljturner@appstate.campus.mci.net>
Message-ID: <5r94gqoro1@news.campus.mci.net>
Source record: 192947

I just purchased this super compact rig. I wasn't expecting this small of a jewel. How'd they do that? Anyway I am looking for maximum mod? All of my ham buddies are off to the ham fest and I am sure that they have already done theirs. Does anyone have the info to this unit.

Thanks agian:
ljturner@appstate.campus.mci.net

CelWave still makes the same fine antennas Phelps Dodge did. Provide me with an antenna model number, or description, and perhaps I can tell you what you have. CelWave still gives hams a 25% markdown on their products, like PD did.

Yes, I've had bad luck with AT&T phones too. Believe it or not, the
best telephones I've found with regard to RF susceptability are at
Radio Shack! (EVERY RS phone I've ever seen has a RF choke in series
with each side of the phone line. It makes a very big difference.)

Intrinsically Safe Equipment is equipment that is designed for use around
flammable atmospheres. Intrinsically Safe means that it will not cause a
spark when in use and has been certified that it won't. Your HAZMAT
responders need equipment like this so they can communicate during spills,
etc without blowing anything up.

Perhaps someone can inform the original poster about phone patches for a
business?

Looking for comments/hints/warnings/do's-n-don'ts concerning the installation of 2meter and HF rigs in 1997 Chrysler products: Specifically, 1997 Dodge Caravans/Plymouth Voyagers. Most concerned about RFI interference with on-board computers. Maximum output on 2 meters will be 50 watts (Icom 227H) and 100 watts HF (Knwd TS-50S). Any ideas about antenna location/cable runs also appreciated. Please respond ONLY via e-mail to: ka3unq@aol.com

Thanks & 73,

I must be missing something here, but what is it that makes modifying
a ham rig to operate on any frequency (except cellular receive)
illegal? Any homebrew ham rig certainly has a broader transmit
ability than a commercial rig and they aren't illegal. The illegality
comes in if someone actually transmits, not by simply having the
equipment.

The title of this thread indicates some NEW law, but what is it
exactly? I've been away for several weeks and have missed
the original posts that must apparently have that detail.

The use of handheld with mobile antenna improves the TX / RX
"dramatically." (instead of rubber dukkie) I just bought some
connectors (so I can hook up) and I am now very happy with the
improvement. I can't kerchunk one local repeater with 2.5W w/ rubber
dukkie, but now I can with 1W w/ mobile antenna. Great
improvement.

1639. Scheduler 2times?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-24 00:00:00 UTC
From: don.phelps@infoway.com
Message-ID: <869718641@infoway.com>
Source record: 193019

Personal Schedulers, I am about to evalutate again.
So what do hams use, who have ham scheds in UTC, and
business schedules in local time, make long distance
calls to other time zones?

I just looked at the DayTimer program, because I used to use
Day-Timers. Their features seem to have the basics:

Calander by day, week, month per page printout.
Schedules during the day, to do list.
phone book and phone dialer
address book.

The problem is they have it locked up in their database.
I want a database I can access with other tools, and
would expect dBase format dbf files.
I have Excel 5, and FoxPro 2.7 at the moment.
I see no reason to build myself into managing my database
where I don't have access to it.

So what personal schedulers, contact managers do hams like to use?
Do they handle multiple time zone formated scheds?
Search my call sign?

I am interested to see the range and popularity, so please,
tell me what you use (even if it's the old paper pad method.)
Thanks for sharing.

I have these units listed on eBay AuctionWeb for best access, and most
fair bidding.

The following link will show you all items I presently have listed there
for auction... just click on the link for the item you wish to bid on.

http://www2.ebay.com/aw/seller-list-fast.cgi?email=ron@alphaomegaelectronics.com
(hopefully that all appears on one line!)

If it's not updated yet, use this, and search for "GARMIN" or "GPS" in
the very top box (beta search): http://www2.ebay.com/aw/search.html

(note: check ever couple of days... I'll also be adding my old
engineering prototype GPS-100 Survey unit... it has "long term position
averaging" for MUCH more accurate position calculations. Or, I may sell
it to the first person that comes up with an offer I can't refuse...
like about $500. It's not the best looking unit, but it works great!
I'll add it to my WebSite first, so check it out, use the link below...
in the "New Arrivals" page.)

Thanks!
Ron Chinnery

I didn't want to mention it, but it's worth noting that a lot
of us OFs use a plain ol' Unix reader, not one of these newfangled
GUI gadgets. ;-) Heck, when I was a boy, I had to walk through
deep snow, 5 miles to school--and it was uphill BOTH WAYS!

:-)

It's not a big hairy deal, but the truth is, a LOT of folks
still use the primitive text-based readers we grew up with before
all the AOLers started showing up with.

BTW, that snow I had to walk through, to school? It was in
South Louisiana--and since it practically never freezes there,
it was one UGLY snow to have to walk through! ;-) 73!

Hi, Jeanne.

Please try my Morse code program, International Morse Code Processor,
version 3.13 (IMCPW313.ZIP).

You can download it from either of the following locations:

http://www.simtel.net/pub/simtelnet/win3/ham/imcpw313.zip

http://www.coast.net/SimTel/win3/hamradio.html

IMCPW (International Morse Code Processor for Windows) v3.13 is a
Windows 3.1 & 95 compatible program which translates

program-generated/user-defined text and text files to Morse code. Code speed is adjustable from 3-50 wpm with a character speed of 10-50 wpm for Farnsworth code. Keyboard Copy window included for copying code from the keyboad. "Barred" characters implemented. User can define any prosign. Select characters and prosigns in groups or in any combination. Includes a comprehensive help facility, a main menu, four popup menus, and eleven code practice lessons. It is Fully customizable from the Options menu. A Sound card is not required. Requires 964K of free hard disk.

Phelps Dodge used to be in Marlboro NJ. They are no longer in business.I
can't recall the name of the company that bought them out, but they make
the StationMaster line of commercial antennas. Somebody here will likely
know the company that has the StationMaster line.

Make darn sure you own the premises wiring if you do this, and make darn sure
the yellow and black are not connected to telco wiring. And make darn sure that
any phones which are added later don't use yellow and black (for example Princess
phones feed AC on these lines to light the dial). In fact, just don't do this, it's a trap
waiting to spring on some unsuspecting person.

>It is illegal to open a phone and modify it inside.

Nonsense, totally untrue. A phone requires a registered line access unit (usually
a little black blob right at the point where the line enters the phone), but
everything else in the phone is fair game. Of course don't do anything stupid
which will load down the telco circuit, or inject any signals stronger than -10 dbm,
but otherwise you can do what you please inside the phone.

If you have the AT&T wall mounted slimline telephone, there is nothing that can be done but throw it away and buy real phone. I had one of these bastards and for 2 years I tried everything, I mean EVERYTHING! While bitching for the umpzillionth time to the phone company, one of their installers caught me in the parking lot and told me there was nothing to be done for it. Toss it and get a desk set he said. I did. I no longer had any interference. Wife and daughter happy, ergo, I be happy too!!

>
>MD

Interesting, and very eloquently put. I feel that those of us who live in the U.S. are very lucky in the freedoms that we have concerning the right to listen to (almost) anything that is broadcast. Contrast this with the draconian laws in the United Kingdom, where the Wireless Telegraphy Act of 1937 rules. Basically, the act (and it's amendments) require you to have a license to listen to ANYTHING, including television. (True, there's no requirement now for a license for a regular broadcast receiver, but I can recall a time in the past 40 years when there was - including a special license for a regular car radio.) By having such an act, the U.K. government has a way of restricting what you can legally listen to, although I gather they don't enforce it too enthusiastically.

BTW, I am in total agreement with your arguments that the cellular industry should encrypt it's transmissions, rather than relying on scanner bans. IMHO, this strikes me as a case of commercial pressures whereby the industry had to rush a technology to the market place, make it cheap enough to be "consumed", and then uses political leverage to force laws to be adopted in order to cover the technology's weaknesses.

Very good Michael except with your line of reasoning you could claim any
behavior is a right at your whim. You forget that in this country the
people are the government and thus you set the restrictions on yourself
through your elected representatives.
>

That's absolutely correct and that only means that the states can
regulate that power, nothing more. But read on I will have more to say
about this later.

I'm not confused in the least and thank you for you for making my point.
Anything, including rights are subject to "guidelines" and regulation so

that we "do not infringe on the rights of others".

Let me state it in another way. A right is only a right if the government, which by definition is all of us, says it's a right. Thus if the people decide to change or regulate something they can because as you state they are the government.

What I ->think<- you are confused about is you think government is some none descript body somewhere. You forget that you and I are the government and the legislative process is how I or you make changes, enact laws, and regulate behavior for the good of us all.

> The federal government has an interest in regulating radio transmissions.
> I say transmissions because the act of transmitting often crosses state
> lines.

I would accept an argument that the interstate commerce clause of the Constitution covers this but only if it specifically relates to using the airways for the purpose of commerce and not just talking to a friend. An example would be ABC, NBC, who are using the airways to make money, or any other activity where the airway is used to further money making or business activity. I would not accept this argument as related to the ham bands. I would state that the regulation of the ham bands by the federal government is simply a result of the fact that our founding fathers could not foresee this technology so the government simply filled in the void.
>
> However, I would argue that the federal government has no interest in
> regulating receipt of transmissions. Such a power is, by definition of
> the tenth amendment, reserved for the states to regulate. Such interest
> has ominous implications, and is one reason why I did not support the
> "ban" of cellular-capable receivers.

OK Michael you and I now agree. If you have saved this thread you will note that I have never mentioned that I believed that the federal government had any right in this area. All I have ever said is, there is a right to regulate and as you state this power is reserved for the states to do as they see fit.

As far as the cellular ban goes I believe that the federal government took power on this issue under the Interstate Commerce Clause of the Constitution, because certainly the cell phone industry isn't doing this stuff for free. Bhuuuut, since scanning airways, even if they scan a portion that is being used for commerce, isn't commerce in and of itself, I would say that the federal government was on pretty thin to nonexistant ice here.
>
> You must understand that the underlying issue is not necessarily one of
> being able to physically listen and understand what is being said on any
> particular frequency, but the greater danger of having the government start
> to regulate what you can and cannot listen to, which is akin to censorship.

OK, but there is also an equal danger that you might start demanding a right to invade my privacy by using technology to listen in on my conversations inside my home. Since we both know that such technology exist where do we draw the line? There is a guy over on the alt.radio.scanner group who believes that it is up individuals to protect their own privacy and anything he can hear with the technology at his disposal is fair game. I hope this guy is in the minority because he's really scary.

> Now, if the operator of the equipment which transmits over the airwaves

OK let's do that. Let's trash this law and demand that police and anyone else who wants privacy must encrypt. I like that. You can have your scanner and I can have my privacy.

> >As far as monitoring government for corruption and abuse of power this
> >is ridiculous. Plots to enslave the people will not be hatched on a
> >police frequency.
>
> Tell this to Rodney King.

All right Michael, lets get real. What happened to Rodney King was not hatched on a police radio. He got the crappola kicked out of him on the spot and without plotting it on the radio. This kind of statement is emotional and not based in reason and you know it.

>
> >If they want to monitor government and in particular

> waiting until you have a chance to sugarcoat and spoonfeed everything.

They use scanners to get on scene so they can get that Pulitzer Prize winning photo and make their deadlines. We still "sugarcoat and spoon feed" the information to them. As a matter of fact most agencies I know of have a Press Information Officer and all information is through him/her. My department has a regulation that prohibits me from talking to the Press. They are simply referred to the PIO.

> The people should never accept what the government tells them on blind faith.
> This is, after all, the same government that fed retarded people
> radioactive food to see what the effects would be.

No, no, Michael, we gave radio active food to retarded people and let
syphilis go untreated in African American men. Remember we are the
government. Now ask yourself how do we know these things happened
because we got into the written record that's how. The information was
there all we had to do is find it.

Listening to a scanner is a lazy man's excuse for monitoring government
and calling it his civic duty. Futhermore you and I both know that
listening to a scanner is not for the purpose of monitoring government
it's just fun.

> Several points here:
>
> 1. If you are so concerned for your safety in law enforcement, you should be
> encrypting your transmissions.

I agree.

Your argument sounds like the typical
> Handgun Control, Inc. "solution" to gun crime -- "If we eliminate all the
> handguns, only cops will have guns".

I'm a life member of the NRA and have already stated that gun laws are
useless; but more importantly I can show you in the Constitution where
the right to arms is written. However, even when it's in the
Constitution look what happens.

Yeah, right. What makes you think if
> you pass a scanner law that criminals are still not going to have scanners?
> Gun laws haven't stopped a huge black market for guns from appearing, has
> it? How hard do you think it will be for "black market" scanners to start
> appearing? Or, do you propose to attempt to remove the knowledge of how to
> build a scanner from society, in which case you'll also have to make it
> illegal to publish any information on how to build a scanner capable of
> receiving police frequencies?

Actually I'm in favor of thought control technology. I think that the
police should have a device where we could control your thoughts and and
I wouldn't have to worry about scanner laws or gun laws. I really liked
that "memory" thing in the movie "Men in black."

> Unfortuntely, the cell ban has set the precident for this type of law
> to pass. Once public safety frequencies are "banned", what frequencies

But I've already told you that I'm willing to let you have your scanner, but I want encryption and I don't want any whining when your scanner can't hear me anymore.

It's your turn now. BTW I see you live in Maryland. Are you near the Chesapeake? I finished my time in the service out there. I use to love Chesapeake oysters.

The local club (Sonoma County Radio Amateurs) will be operating this
weekend from Alcatraz Island, in the middle of San Francisco Bay.

Does anyone know the proper IOTA (Islands On The Air) number?
I assume it would be either NA-184 (California North) or
NA-187 (California Centre), but I can't figure out which one.
Can anyone help me out?

By the way, listen for W6LFJ this weekend!

This is a one time message. If you are not interested
we sincerely apologize. Sorry for disturbing you.

CLEAN BUT NEVER SCRATCH YOUR LENSES OR CD'S AGAIN!

THERE IS ONE THING THESE COMPANIES AND
INSTITUTIONS ALL HAVE IN COMMON:

Exxon
Casio
Texas Instruments
Rubbermaid
Southern California Edison
Nikon
Olympus
Gargoyles Performance Eyewear
Sunglass Hut
The American Eye Institute
Pearle Vision
Kaiser Permanente
Panavision
The New England Eye Institute
Sears Optical
New York State College of Optometry

THEY HAVE ALL PURCHASED THE CLEARLENS MICRO-FIBER
CLEANING CLOTH.

For six years Crystal Optical has been distributing the
CLEARLENS cloth which is now dispensed and used by
over 6,000 optical stores, optometrists, ophthalmologists,
optical laboratories, opticians and doctors. And it is also
used by over 1,000 camera stores and film laboratories.

THIS CLOTH WAS NOT AVAILABLE TO THE GENERAL
PUBLIC UNTIL NOW.

The CLEARLENS cloth is a one of a kind micro-fiber
cleaning cloth which is great for cleaning:

Eyeglasses
Compact Discs
Camera Lenses
Film
Jewelry
Musical Instruments
Monitors

TV Screens
Glassware
Silverware
Photos
Electronic Parts

and much more...

The CLEARLENS cloth works without the use of sprays and chemicals, and it will NEVER SCRATCH! Also, ONE CLOTH will last you a LIFETIME.

FEATURES:

The micro-fibers that make up the CLEARLENS cloth are less than 1/100 the thickness of human hair. This allows the cloth to get under, lift and absorb dirt and oily film.

It is tri-woven and the raked to give it a chamois texture unlike all other micro-fiber cloths.

CLEARLENS is 3 to 5 times thicker than any other micro-fiber cleaning cloth.

It cleans and absorbs dust and oily film without the use of chemicals.

Since it is not treated with any chemicals, it can washed and re-used repeatedly. After washing all cleaning properties are fully restored. Just toss it in with your laundry.

It does not have any unstable filaments on its surface: it cleans without leaving lint.

Safe for use on plastic, polycarbonate and A/R coated lenses. It is used by four of the world's largest coating laboratories.

We are sure you will be AMAZED, and you will see why so many doctors and people in the optical, photographic and electronic fields use and recommend CLEARLENS.

If you wear glasses, listen to CD's, use CD's in your computer, or use a camera, this is a MUST-HAVE high-tech product that you will LOVE.

The CLEARLENS cloth is now available to you, and it comes with a 100% money back guarantee if you are not completely satisfied with the product.

The CLEARLENS cloth is available in four colors: GRAY, LIGHT BLUE, PINK and YELLOW. It measures 5 X 6 inches.

You can own your own CLEARLENS cloth, 1 for only $3.99 or a family pack of 4 for $9.95.

Please send check or money order payable to CLEARLENS to:

Crystal Optical/ CLEARLENS
11620 Trask Avenue
Garden Grove, CA 92843

Shipping and handling are INCLUDED in the price.
Please indicate your color choice with your order.
Please allow two weeks for delivery.

Having operated in Toronto and Montreal I sign N2JTX stroke VE3 and
N2JTX stroke VE2 respectively. I could probably say portable but nobody
has complained yet!

You only need to carry your license with you. There is some debate
whether to carry the original or a copy. On my last trip to Toronto in
June, I just carried a copy. I haven't yet been stopped by the radio
police.

Want: KWM2-A & 516F-2, Round Emblem

I am looking for a VERY CLEAN Collins KWM2-A. "A" and
ROUND EMBLEM Only. It must be mint and with NO MODS.
Also looking for the matching 516F-2 Power Supply.

It must be in "Excellent to Mint Condition", no signs of
wear and tear, and the cabinets finish to be in perfect
without a sign of wear. It must be functioning perfectly.
Must have Original Operating Manual.

Drop me a note with what you have and the price you are
asking for the unit.

Thank You,

Boyd

Before you consider entering canada, to use your amateur radio
equipment, contact RAC for reciprocating agreement. You might be ok
without any advance paperwork but do check first and give yourself
lots of time incase you need some papers.
Second, the frequencies you are allowed to use are the subbands where
our and your varioius mode subbands 'overlap'.

Radio Shack's Pro 26 would be no longer cell-receivable by using IF
freqs as I expected in the past (I posted several articles regarding
this in "Pro26 Recall !!"). I was right... If you buy a pro26
"now," you will not be able to receive cells by IF freqs as the 1st,
2nd IF freq set is very high.

1671. Antique Tube Radio, Pre WW II, Lafayette

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-25 00:00:00 UTC
From: in717@cleveland.Freenet.Edu
Message-ID: <5r9evl$q4l@alexander.INS.CWRU.Edu>
Source record: 192963

Hi, I've got for sale on Ebay's Auction Web:
Antique Tube Radio, Lafayette, Pre WW II. The outside case is basically shot. It has the face plate marked with Lafayette and has 2 swastikas, which is what leads me to believe that it is pre- WW II. It has a plate affixed to the back of the chassis marked G7417, which I believe is a serial number. It has 5 vacum tubes, they are marked as follows:
2 are 35-51, 47, 24A, 80. I think that each number should be preceeded by a " G ". All the tubes are Wards Super Airline except the 80 which is Nat. Union Electic. The unit will power up and all the tubes glow. I ran it for 5 mins. It didn't catch fire, smoke, or smell, also it didn't produce any sound. The original case is a round top (cathedral type?). Buyer pays 18 lbs. S&H, Please e-mail me with your zip code for acutal shipping cost.

Bill - H.R.1964

You are correct. the amateur can modify his equipment, but he can
not transmit on modified equipment in any service other that the
amateur radio service legally. This was faxed to me from the FCC a
couple weeks back as I had a question about this. The problem arises
is most manufactured amateur radios with receivers that operate above
30 MHz are also type accepted under FCC Part 15 for receiver
radiation. Due to the nature of FCC Part 15 most all amateur
transceivers like the above are approved as scanning receivers. So
not watching what this new bill number H.R.1964 is all about could
result in some overlooked amateur frequencies being included. I do
not think the senate knows a hoot about amateur radio nor the
frequencies they use.

So if FCC part 15 mandates deletion of various frequencies, amateur
radios with receivers that operate above 30 MHz are subjected to FCC
Part 15 will also be caught up in this bill. Many here seem to not
realize how the amateur radio fits into this bill H.R. 1964 and are
all for the passage of the bill. That is fine but I am saying just
keep an eye on thai bill so we do not loose something by not speaking
up about it. It could be written so tight that even MARS and CAP
operators would need to use the more expensive commercial radios for
their operations in the future.

Hello tnx for reading this message.

a few day ago I bought an antenna FD3, it's a wire antenna from abt 20M

Now i have 2 possibilities to install it.
1. in one line from north to south on about 8m
2. in north - south east with the balun on 12m but as inverted V

what's the best way to do it...?

tnx in advance

I think you are all missing the point. The proposal is not just
"repeater bandplans." It is all ARRL recommended operational plans for
all amateur spectrum -- HF as well as VHF/UHF.

Franky,

The Fritzel FD3 is a 40 to 10 wire antenna with 500W rating. probably
#2 would be best as you get 4 meters more height at radiation center.

All hobbies are complaining about the "graying" of their members. There are several reasons why. Amateur radio, shooting, photography, dog showing, etc all require skill and knowledge, are expensive and to a certain extent require a degree of passion. I was at a new fly fishing shop here in Lafayette during its grand opening and one of the manufacturer's reps commented on the number of people visiting was that "the boomer are finally getting into hobbies." Most hobbies today have members between 40 and 70 years old. The boomers have been too busy getting drugged, laid, working, raising a family and now just have the time, money and interest to have hobbies. Plus the boomers had a surplus population, when I graduated from high school in 1969 there were over 30 million 18 year olds. In 1992, there were only 9 million 18 year olds. Our population is decreasing with now having a third of the kids we used to have (thank the pill and abortion).

The other thing that limits us is that our culture is self focused yet dependant on government. We please our desires and expect the government to clean up the mess. I just returned from a year in Europe. The Germans have no extracurricular activities in school. This is a function of the club system. They get use to joining, plus it is the only way to meet girls. Clubs are the center of German social life. We go to bars, they go to church choir. They have more gun stores, gun ranges and cheaper prices (even with the VAT). Clubs build interest in the Kinder and train them to proficiency.

We have alot of problems that the Germans and the Japanese do not. I just talked with a technical rep from Valor (makes Pro-Am and Jetstream antennas). He can't get his higher ups to make tri-band antennas for 6, 2 and 440. The Japs have all sorts of 6 equipment but no importer will bring it in because they see no market. The Japs cultivate the market.

DIVISIONAL NEWS

CHANGES TO THE REGULATIONS EXAMS

The Australian Communications Authority (previously the Spectrum Management Agency) has advised that the content of the "Licence Conditions Determination for Amateur Operators (LCD) has been released to the public by means of the Internet. It can be found at the ACA web site, http://www.aca.gov.au/ Photocopies of this document are available from the ACA offices.

As a result of this, the WIA Exam Service will start examining on the matters contained in this document from 15th September (unless more time is needed for the new questions to be approved).

Orders received prior to August 15th will be filled from the current question bank. After 15th September, papers will contain questions on the updated conditions, frequencies, power & permitted modes.

Further information will be available via Amateur Radio Magazine and all Divisional Broadcasts as & when it becomes available.

EXAMINATIONS

The next examinations will be held at Amateur Radio House Parramatta next Sunday 3rd August 1997. This will be your last chance at the old price, as there has been an increase in the cost of exams. Also, this will be the last Regulations exam for a while. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm.

--submitted by Eric Fossey VK2EFY - Divisional Secretary.

AFFILIATED CLUBS NEWS.

Attention All Affiliated Clubs & WIA Members!

Nominations have been called for the new quarterly VK2 Division Individual Award. The theme for this quarter's award is "For Literary Excellence". That is, the writing of articles for Amateur Radio Magazine, your Club's magazine, or any Electronics/Radio magazines.

Nominations should reach Amateur Radio House no later than 6th October giving particulars of what makes this particular WIA Member stand out, and should include samples of the Nominee's published articles. This will enable Council to make the correct choice at the October Council Meeting.

The value of the award is $40.00. Only WIA Members are eligible for nomination, and members of Council are excluded.

A reminder that the next Affiliated Clubs Net will be held next Sunday 3rd August at 09.00 hours, on 3.595 MHz.

--submitted by Ken Westerman VK2AGW, Affiliated Clubs Officer.

WICEN NEWS

There is just two weeks to go for the Annual General Meeting, to be held on Saturday 9th August, at the Hornsby RSL Club, starting at 11am. As before, it was chosen due to its proximity to a major railway station, and its convivial atmosphere; it is also reasonably central to all members. It

will be preceded by an RCOs' meeting, to appoint two Deputy State Coordinators, the nominations for which having been received by the Management Committee. To whet your appetite (apart from the bistro and bar), there will be a practical demonstration of the GRN system, and as an added inducement some door prizes will be given away, namely gift vouchers upon a well-known electronics retail chain and a year's membership of WICEN. Furthermore, Simon Trotter VK1AUS will be speaking on his experiences in RAYNET -- WICEN's equivalent in Great Britain -- and the ACT.

A major event next month is the annual City to Surf Fun Run, on 10th August; as usual, David Shaw VK2TIP will be coordinating this august event, and fifteen or so volunteers are required. David can be contacted at home on (02) 9588-5061, at work on (02) 9364-8631, or mobile on 0412-000-383. Those not lucky enough to snaffle a free meal at the Finish can join a BYO barbecue at the clubrooms of the Waverley Amateur Radio Society. Incidentally, the family of at least one WICEN participant will be jogging along, so what about the rest of you?

Central Coast WICEN would like to invite interested members to the Shahzada (pronounced sher-za-da) Horse Endurance Ride, over August 25-29th. The Shahzada is a 400km, 5 day horse endurance test conducted in the area around St Albans, north-west of Sydney, and requires WICEN members to be taken out of their comfort zones, working 14 hour days at a minimum, sleeping in tents, and providing for themselves with limited facilities. The climate is difficult and the

terrain
is not conducive to easy radio communications. In other words, it sounds like lots of fun! To provide effective communications for this event, we require generally fit people, with a car, camping gear and radio equipment. We also require operators to be reliable, following specific instructions to the letter. Comprehensive briefing notes will be made available for those interested. If you are interested in attending this event, please contact Dave Thorncraft VK2UDT.

If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

MAGAZINE ROUNDUP [held over from last week]

Here again is yet another late summary of the local magazines, which in the author's opinion could be of interest to Amateurs; your scribe regrets that he is getting busier lately. This week we discuss the July issues of the various magazines.

"Electronics Australia" continues the debate of mice and mobile phones; an interesting clone of the "Basic Stamp", the "Counterfeit", is investigated; exploding soldering guns are revealed; a regulator for the mobile shack battery charger is constructed; a half-duplex link operating at several TeraHertz is introduced (no licence necessary); your back-yard shack can be monitored with a simple video kit; the Internet again gets blamed for something that can be found in a library; and Intel admits that its range of Pentium processors has a bug.

"Silicon Chip" finds PCs a practical purpose via their parallel ports; a simple waveform generator is generated; a colour TV pattern generator is continued; programs are removed from "Windows 95" (what a wonderful idea); and a Radiola is revamped.

"Amateur Radio" builds a 1200bps packet radio modem for HF; the performances of dipoles, from saggy through to droopy, are aired; a popular TNC kit has its performance doubled; and some interesting antenna ideas are examined.

"Radio and Communications" builds a UHF CB antenna; whether computers have affected radio is examined; the GRN system is revealed; the question is asked as to whether the USA ought to use FM on CB; and 20 years of CB is celebrated.

For the greenies amongst us, the July-September edition of Renew (formerly Soft Technology) covers: a self-installing wind generator, which uses a technique that could well be applied to amateur antenna installations (no tower climbing necessary!); advances in wave power generator technology; solar heating your house (or your shack); the Federal Government's "Greenhouse Challenge" program a visit to the Sydney house that is self-sufficient for its electricity and water requirements; and a number of other features on renewable energy

systems, conservation, and other greenie stuff.

Finally, we understand that "Forbes" magazine carries an article on Amateur radio.

Be listening next month for another summary of the local magazines.

-- Dave Horsfall VK2ZTB

DX REPORT

TANZANIA - 5H3FS/1 will be active from Zanzibar from July 27 to August 9. Activity will be on 160 to 10 meters, using RTTY and SSB.

IRAN - EP2MKO is active on 20 meters using CW.

REUNION - FR/DF2SS/P will be active from July 28 to August 17; he will operate mostly SSB on 160 to 10 meters.

PANAMA - HP1XBI/4 hopes to be active in the IOTA (Islands on the Air) Contest this weekend from Bocas del Toro.

SAO TOME - S92AT is active using CW and SSB. He hopes to be active on 160 and 80 meters soon.

ICELAND - TF/AE4FY will be active until the end of September, using CW, SSB and RTTY, on 40, 20, 15 and 10 meters. There is also the possibility of some 6 meter activity.

SAINT PAUL ISLAND - CY9SS will be QRV until July 31, operating primarily RTTY and 6 meters.

LORD HOWE ISLAND - VK9LL will be active in the IOTA Contest, also outside the contest as VK9LR, using CW and RTTY. They expect to operate as VK9L as well.

SOUTHERN COOK ISLANDS - ZK1AAT will be active from Aitutaki on 40 and 30 meters using CW from August 1 to 11.

--condensed from ARRL DX Bulletin 32, dated 24 July

WARTIME RADIO EQUIPMENT

Is anyone interested in restoring a Wireless Set No. 122, dating from 1945? Several of these sets, complete with power supplies, have become available. The WS122 is an Australian made transceiver covering 1.5 to 20MHz in three ranges, with CW and AM voice modes. The available sets appear to be complete and are in various states of repair.

If you are interested, please contact Bernard Kates, VK2IDS, during business hours on (02) 9887-6919, mobile (0412) 165-578, fax 02 9878 8292 or by email to bkates@atlas.com.au

--Bernard Kates, VK2IDS

Radio restoration enthusiasts in the south of the state might also be interested in a radio auction that will take place in Chiltern, Victoria, on Saturday 16th August. The auction will include a collection of early 1920's radios and speakers, cathedrals, and other items of interest to vintage radio fans.

For more information about the auction, listeners can contact Radio Restorations of Wodonga on (060) 24-4558.

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY

Most people listening to this broadcast would be familiar with the Heard Island DX-pedition earlier this year and I am sure many would have liked to have taken part. The next best thing is to come along to our next meeting where David Muller, VK2JDM, who was the only VK expedition member, will give a presentation.

Those who have heard David's talk and seen his video and slides say that this is something not to be missed and that it will appeal to anyone with an interest in the Antarctic. So make a note in your diary for 7:30 pm on Wednesday, the 20th of August.

The next project day will be on Saturday, 2nd of August so come along from 1:30 onwards and see what we are up to. This is a good time to get advice on faulty rigs, see and operate the facilities at our shack and meet other members. Raffy Shammay, VK2KRF, will be there again with his digital camera and T-shirt printing facilities, so if you want a portrait,
call sign or anything else printed on your T-shirts, bring them along. Our clubhouse is located next door to the Rose Bay RSL Club in Vickery Avenue, Rose Bay, off New South Head Road. Anyone interested in amateur radio is welcome to come along to our meetings.

--Simon Buxton, VK2EII, President

THE HORNSBY & DISTRICT ARC.

Our formal monthly meeting was last Tuesday, July the 22 nd. there was a good attendance, David VK2NH provided an informative lecture, nobody went to sleep, thanks again David. The next meeting is the informal get together on Tuesday the 12-8-1997. at 8:00 pm. in the Mount Collah Community Centre, Pierre Close, Mount Colah. (near the eastern entrance to the railway station). On the 16-8-97, the Hornsby and Districts Amateur Radio Club Inc. will be operating an Amateur Station, from the grounds of the WIA. transmitter site, at Dural. The Station will be a contestant, in the Remembrance Day Contest, under the Club calisign VK2MA.

Training Classes: For more information ring Tony VK2BTL by phone on 9487 3383 once more 9487 3383.

The Club Net every Monday night at 8:00 pm. on VK2RNS. frequency is 147.250 with a positive offset. Feel free to join in, if you are a listener

set
your reciever to 147.250. We would like to hear from you, or better still
we would like to meet you at one of our meetings, you will be made
quite welcome.

If you would like more information about the Club, write to HADARC.,
Post Office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 2490.

--Submitted by John. W. Turner VK2WRT Publicity Officer.

THE NEXT QUARTERLY MEETING OF THE MID SOUTH COAST
AMATEUR RADIO CLUB INC. WILL BE HELD ON SATURDAY AUGUST
2ND 1997 AT HANCOCKS RANCH, LITTLE FOREST ROAD, MILTON.

TO REACH THE RANCH TURN WEST OFF THE HIGHWAY THREE
KILOMETRES NORTH OF THE VILLAGE OF MILTON.

ARRIVALS START FROM 1030 HRS ONWARDS. BRING THE. FAMILY
WITH YOU FOR AN ENJOYABLE DAY. YOU WILL BE MADE MOST
WELCOME.

FACILITIES ARE AVAILABLE FOR BARBECUEING AND WE SUPPLY
TEA, COFFEE AND AFTERNOON TEA.
LOOKING FORWARD TO SEEING YOU THERE.

--73 DAVID VK2CX, HON. SECRETARY

ORANA REGION AMATEUR RADIO CLUB

The Orana Region Amateur Radio Club Meeting will be held at 8pm in
the Scout Hall Talbragar St Dubbo. Thursday 31 July

--Ken Westerman VK2AGW VK2 division Affiliated Clubs Officer and
Orana Region ARC Club Member

FISHER'S GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every
Wednesday Evening from 7:00 pm at the Campbelltown High School,
Chamberlain St. Campbelltown

Also every Third Tuesday of the Month from 7,.30 pm, at the
Campbelltown High School, is the General Meeting night with lectures
on popular subjects.

In addition to our Packet PMS VK2FFG on 144.925, Terry, VK2TLU is
running a BBS on 145.100 that is proving popular around the area.
The next lecture is on the 19 th of August and is about High Speed
Packet.

The September lecture is being presented by the Blue Mountains ARC
and will be about "Fox Hunting".

Don't forget JOTA in October.

The proposed lecture agenda is:

August 19: High Speed Packet
September 16: Fox Hunt Information Night presented by Blue
Mountains ARC
October 21: Home Brew Competition (Oktoberfest !)

--Publicity Officer: Chris VK2ZCJ

BLUE MOUNTAINS AMATEUR RADIO CLUB INC.

Just a short note this week to advise everyone of our special trash and
treasure on the 2nd of August 2pm at Springwood High School we will
be disposing of an entire station so there will be plenty of good stuff
available.

Our monthly meeting will be the night before at the same venue, this is
also a special general meeting so be there or be talked about.

Last week I mentioned the Blue Mountains intent to build a voice and
packet link accross the mountains, what I forgot to mention was if there
is anyone interested in helping with this project could you please

contact our Repeater Manager Dave Pike VK2-DPA.
or our newly appointed Packet Manager Dave Barry VK2-IH.

MANLY-WARRINGAH RADIO SOCIETY

Next Sunday, the Society will be conducting a communications exercise
in conjunction with the Kellyville Riding Club. The event starts at 9am,
and radio operators will be setting up from about 8 o'clock.The club
requires quite a few operators for this event, so if you are available to
take part next Sunday morning, please advise the club at the
Wednesday meeting.

The Manly-Warringah Radio Society meets every Wednesday evening at
the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills,
with business meetings on the second Wednesday and lectures on the

third Wednesday of the month. Doors open around 7:30pm for an 8 pm start, and visitors are always welcome.

If you need directions to get to the club, just call in on the club two metre repeater on 146.875 MHz, or phone the club any Wednesday night on 9450-1746.

BROADCAST ROSTER

Next Sunday, 3rd August 1997

Morning:
Announcer: Pixie VK2KPC
Engineer: Eric VK2EFY

Evening:
Announcer: Pat VK2JPA
Engineer: Peter VK2CZX

If you would like to submit a news item for inclusion in the VK2 Divisional broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC

by Internet email to wiansw@sydney.dialix.oz.au

The deadline for submissions is 2pm on the Friday preceding the broadcast; if sending by packet or Internet, please allow for forwarding delays in the network.

If sending printed copy, please double space your text, leave wide margins, and use a plain font such as Arial or Helvetica for clarity. Please proofread your text, check your grammar and punctuation, avoid using shorthand and abbreviations, and use the exact words you wish the announcer to say on air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

From: jason_hsu@bigfoot.com
Message-ID: <5ra7fq$4k1@drn.zippo.com>
Source record: 192976

I have yet to see ham radio equipment dealers and manufacturers attempt to recruit nonhams. Why don't they? There is plenty of room for growth (99.8% of the U.S. population are nonhams), the companies involved have a LOT to gain, and the first company whose promotion attracts a new ham would find itself with a possible loyal customer. No product, no matter how superb, can sell if nobody knows that it exists.

Admittedly, a lot of time and effort is needed to become a skilled amateur radio operator. But you can say the same thing about freeing Princess Zelda from the clutches of Gannon (sorry if my video game knowledge is out of date), keeping up with the latest failed charades of "Seinfeld", or being a loyal fan of a favorite sports team.

I would like to see ham radio become as much a part of the American culture as the NFL. I would like to see ham radio become as much a part of growing up as Barbie dolls and GI Joe action figures. Amateur radio would give restless children something fun to do and motivate them to learn in school.

Any thoughts on this?

Hi

Big L (Radio London) is broadcasting on an RSL off the coat of Walton (Essex) until 14 August 1997.

As I live some distance from there I wont be able to record much of the output but I'm happy to set up an exchange if anyone wants to swap recordings.

Just let me know what recordings you have (date, time, DJ) and I'll put these on a list which I'll mail to anyone who contacts me at the end of the broadcast. You can then make contact to arrange to swap any tapes of interest.

As I starting point I now have a 90 minute (vgc) copy of the Perfumed Garden from 18 July 1967 re-broadcast on 22 July 1997.

Mail to osborn@btinternet.com

I haven't checked lately, but there sure wasn't any age limit
back at the time that W9??? calls were being issued. Then any
expired call might be reissued after 5 years had passed.

For instance, in 1946 I was issued W3LXS. I didn't like that
tongue-twister (not to mention how long it is in CW) and wrote
complaining that I thought that 8th district calls could be
converted to 3 just by changing the number (Western Pennsyl-
vania had just been moved from the 8th to the 3rd district,
so all the calls of the residents there had to change. The
numbers meant you were in the district then!). Without even
a form to sign, by return mail I got W3UKI.

A few years later when my son was licensed, he was issued
W3DGI, far in advance of the L call I was offered!

Boyd:

How do you get that much out with 100w of drive? Are you talking about PEP?
Is this the carrier output with the plate voltage switch in th "SSB"
position? In the CW position, I get maybe 800-900 wattts out
key-down.(stiff 220V circuit)

It's a great amp and $900 is a good price. Best amp out there using a
3-500Z, IMO

----

ARRL BOARD SUPPORTS HAM SPECTRUM PROTECTIONS, BAND PLANS, VE RULES CHANGES

The ARRL Board of Directors has resolved to support legislation that would provide statutory protections for ham radio frequencies. The action came as the Board met July 18 and 19 in Rocky Hill, Connecticut. In taking this action, the Board cited the potential threat to Amateur Radio bands from the federal policy of selling spectrum to the highest bidder.

In a separate action, the Board voted to seek primary Amateur Service allocations of 5650 to 5725 MHz and 5825 to 5850 MHz in the 5650 to 5925 MHz band that is now a secondary allocation.

Voluntary band plans would be referenced in the FCC's rules under another Board action. Noting the erosion in the level of compliance with the various band plans, the Board voted to petition the FCC to amend the amateur rules to state that hams "should be familiar with, and should abide by" voluntary band plans that apply to the frequencies they use.

In another action, the Board voted to volunteer the League's services as a special event call sign common data base coordinator. The Board approved a motion to submit a request in response to a recent FCC invitation. The request will "express the League's interest in serving as a special event call sign coordinator at no cost to the applicants." The League would cooperate with other groups or individuals the FCC might select to serve as coordinators. Among other things, the League would work with them to develop common guidelines to govern the reservation of special event call signs.

Under a new policy approved by the board, ARRL Volunteer Examiners will not administer exam elements for which they have received credit on the basis of a medical exemption. The Board also proposed changes in the FCC's Volunteer Examiner rules to require that applicants attempt an accommodated Morse code exam before seeking a medical exemption. The Board also wants the rules changed to ensure that medical information supporting an exemption is on file before the application for exemption is forwarded to the FCC.

Noting that no clear consensus has emerged in the wake of suggestions to restructure the Amateur Radio licensing system, the Board voted to extend the period for member comments. At its January meeting, the Board had received a committee report that offered several suggestions to revamp the amateur licensing system. Until further notice, members may continue to direct comments on restructuring to their ARRL directors. The Board plans to revisit the issue at a later date.

In other action, the Board:

* approved a change in Field Day rules to add non-CW digital modes as a separate mode.

* called for the convening of an industry standards conference to explore adoption of common interconnection standards for Amateur Radio equipment. The Board said that adoption of common standards "would reduce the cost and complexity of Amateur radio stations."

* authorized President Rod Stafford, KB6ZV, to appoint an exploratory committee to determine the best way for the ARRL to pursue the development of endowment funds to maintain certain essential ARRL activities "despite budgetary pressures."

* directed the introduction of a program to coordinate a nationwide effort to enlist local volunteers from ARRL-affiliated and special service clubs "to introduce young people to technology through Amateur Radio and to potential careers in technology." In approving the resolution, the Board cited the increasing importance of technological literacy and President Clinton's call for greater volunteer efforts on behalf of youth.

* approved the addition of a system of technical awards to recognize achievement in technical service, innovation, and microwave development.

* voted to have the Volunteer Resources Committee review the duties and responsibilities of the State Government Liaison and consider renaming the position.

ELECTRONIC VANITY APPLICATIONS TO GET PRIORITY

When vanity call sign Gate 3 opens on August 6, 1997, the FCC will process electronic applications ahead of paper applications each day. Previously, the FCC did not distinguish in how it handled electronic and paper Form 610V applications. In recent months, the FCC has been receiving more electronic applications than paper applications. The FCC says it will process electronic applications, then paper applications received on any given day.

The FCC also has established a firm deadline for receipt of application fees to accompany electronic applications. After Gate 3 opens, fees for electronic applications must be received by the FCC's fiscal agent, Mellon Bank, within 10 days of the date of application or the application will be dismissed. The fee will remain at $30 for the ten-year term until September 15, 1997, when it will increase to $50 for the ten-year term.

Applicants can find the electronic Form 610V on the FCC's Web site at http://www.fcc.gov/wtb/amradsrv.html. Electronic applications require a Form 159 for any method of payment. Mail payments accompanying electronic applications to Federal Communications Commission, Box 358994, Pittsburgh, PA 15251-5994.

Paper applications require an FCC Form 159 if payment is by credit card or if the application package contains multiple applications being paid for with one check. Individual applications do not require a Form 159 if payment is by personal check or money order. Send paper applications containing payments to Federal Communications Commission, Box 358924, Pittsburgh, PA 15251-5924.

To avoid processing delays, applicants should make sure the information on their license is up to date. If you have changed your name or address, you must file Form 610 with the FCC to request modification of your license to show the correct information. In the case of a club station, you must file Form 610B.

Gate 3 opens the vanity call sign program to Advanced class amateurs. The FCC has not said when it will open Gate 4, for General, Technician Plus, Technician and Novice class operators. For more information, call the FCC's toll-free Consumer Information line at 888-225-5322 (CALL FCC). Please note the 888 area code!

FIRST SAREX CONTACT WITH PEOPLE'S REPUBLIC OF CHINA SUCCESSFUL

It didn't come off without a hitch, but the crew aboard the shuttle Columbia during mission STS-94 in July nonetheless managed a first for the Shuttle Amateur Radio EXperiment (SAREX) program. On Monday, July, 14, the shuttle crew spoke with students at Tsinghua University. The contact was via a telebridge link with Gordon Williams, VK6IU, in Western Australia. The successful QSO marked the first SAREX contact with a school in the People's Republic of China.

On the first scheduled orbit for the Tsinghua University contact, the designated crew member, Payload Specialist Roger Crouch, was busy with primary mission duties. The SAREX ground team stayed up late and managed a

successful QSO on the following orbit. There were 30 people in the Tsinghua University audience, along with Chinese television, Chinese government officials, and some Chinese IARU representatives. David Chang, BY1QH, coordinated the contact at the university's end. Despite some rough copy, the contact went "very well" with 10 questions asked and answered, according to SAREX Principal Investigator Matt Bordelon, KC5BTL.

The Chinese contact was one of 17 scheduled--and successful--SAREX QSOs the STS-94 crew members completed during its 16-day mission. Overall, ham radio had a very prominent role in the mission, which not only completed all of the scheduled SAREX contacts with school groups but made numerous random QSOs with earthbound hams. Aboard the shuttle were Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF, who set up the orbiting ham shack and completed 19 random contacts before the "official" scheduled test pass. Toward the end of the mission, the Columbia crew averaged three dozen or so random voice contacts per day during the 16-day mission. The packet robot was activated nine days into the mission.

The other SAREX schools on mission STS-94 were: Alvin C. York Agricultural Institute, Jamestown, Tennessee; Center Street School, El Segundo, California; Crittenden Middle School, Mountain View, California; Discovery Place Inc, Charlotte, North Carolina; Du Bois Middle School, Du Bois, Pennsylvania; Dunn's Corners Elementary School, Westerly, Rhode Island; Edgewater High School, Orlando, Florida; Foursquare Radio Amateur Youth, Oxnard, California; Ione Junior High School, Jackson, California; Lawrence Intermediate School, Lawrenceville, New Jersey; Lexington Traditional Magnet School, Lexington, Kentucky; Mountain View Elementary School, Prescott Valley, Arizona; Public School No 9, New York, New York; Robert J. Burch Elementary School, Tyrone, Georgia; S.J. Davis Middle School, San Antonio, Texas; and Yeso Elementary School, Artesia, New Mexico.

STS-94 marked the 24th SAREX mission. The mission--a "refly" of the aborted STS-83 mission in April--carried the same crew members and the microgravity science lab payload. STS-94 ended July 17.

FCC OKAYS COMMERCIAL HF MESSAGING SYSTEM

Over objections from the ARRL and several other parties, the FCC has given a conditional go-ahead to Flash Comm Inc to build and operate a nationwide, commercial, two-way short-data messaging system on HF. The grant, under Part 90 of the FCC regulations, would be on a secondary basis. The frequencies Flash Comm intends to use do not fall in any current ham bands. The League strenuously objected to the plan, however. The ARRL's primary objection stemmed from the fact that some of the frequencies Flash Comm plans to use fall within potential HF band expansions at 30, 20 and 17 meters and close to a potential new ham band at or near 5 MHz. The League said that it would drop its objections to Flash Comm's petition if the frequencies now under consideration for expanded ham allocations were dropped.

All of those who commented on the petition opposed it, fearing unacceptable interference in the HF spectrum. However, the FCC's Wireless Telecommunications Bureau said Flash Comm presented "a compelling case" that

the new service "will be a unique an cost-effective way to monitor public and private property and infrastructure." Under the Flash Comm system, so-called "intelligent transceiver units" would be installed on vehicles as well as on structures. Transmitted data would enable the service to track the location or monitor the status of the "asset." Transmissions would be in short bursts averaging two seconds on unoccupied HF channels the Flash Comm system would select automatically. Radiated power would not exceed 1 W, although individual transmitter outputs could be as high as 15 W. The Commission said authorizing the system would provide valuable data for the FCC to evaluate plans to establish permanent rules for these sorts of operations.

The authorization, which involved some rules waivers, is for five years. Flash Comm has petitioned the FCC to establish rules to provide regular authorization of this type of service.

PRIVACY BILL COULD AFFECT SCANNER CERTIFICATION

A bill introduced by Rep Edward Markey of Massachusetts that's intended to add privacy protections for consumers using the nation's communication networks has caught the attention of scanner enthusiasts and some amateurs.

One clause in the bill--HR 1964, the Communications Privacy and Consumer Empowerment Act--would expand electronic privacy provisions in the Communications Act from the cellular telephone service to all Commercial Mobile Radio Services (CMRS). It would do this by prohibiting FCC certification of devices capable of receiving these frequencies. The CMRS is a relative new umbrella designation of subscriber based radio services that act like telephone services. Such services include commercial paging services, commercial air-to-ground services, cellular telephone, offshore radiotelephone, personal communication services and specialized mobile radio services. The bill includes digital transmissions in those services.

While the apparent purpose of the change is to ensure the privacy of "telephone" conversations, scanner enthusiasts fear that a worst-case outcome could be to inhibit, if not block completely, the further certification of scanning radios. This could include ham transceivers with out-of-band receiving capability. Such radios must receive FCC certification to be sold legally. Designing cost-effective devices to filter the proscribed frequencies could prove difficult for manufacturers.

This week, the ARRL with met with Congressman Markey's staff in Washington to express Amateur Radio concerns about HR 1964. We presented information demonstrating what frequencies would be affected and the impact the bill could have on Amateur Radio public service activities.

"We learned several things," said Steve Mansfield, the League's Legislative and Public Affairs Manager. "First, our suspicions were confirmed that, as a Democratic bill referred to the Republican controlled Commerce Committee, the bill has very little chance of passage in its present form."

Mansfield said the League contingent also found out that members of Congress do pay attention. "We explained that, in addressing privacy concerns, the

bill casts too wide a net and could hurt Amateur Radio interests," he said. "Rep Markey's staff listened attentively to our concerns and invited us to help them craft language to address the problems we outlined, which we are doing." Since provisions within the bill could still be picked up and put in other bills in this or subsequent sessions of Congress, we felt the bill still required changes.

According to Colin Crowell, Markey's Legislative Assistant for telecommunication issues, the provision in question was intended to provide some privacy protections for fee-based "telephone" type services (especially the new PCS service) between now and the time that providers are able to develop robust digital and encryption technologies to ensure privacy.--Steve Mansfield, N1MZA

ARRL BOARD ANNOUNCES AWARD WINNERS

Zachary Manganello, K1ZK (ex-KB1BMG), of Cumberland, Maine, is the winner of the 1996 Hiram Percy Maxim Award. The ARRL Board of Directors approved the award at its recent meeting July 18 and 19 in Rocky Hill, Connecticut. The Maxim award goes annually to the licensed radio amateur under age 21 whose accomplishments and contributions are of the most exemplary nature within the framework of Amateur Radio activities. The winner receives a $1000 award and an engraved plaque.

In other action, the Board chose L. James Biddle, WB3DCL, of Newtown Square, Pennsylvania, and Beverly Priest, N8VZV, of Dayton, Ohio, as joint recipients of the Philip J. McGan Silver Antenna Award. The award recognizes public service contributions, and the Board took the occasion to thank all amateurs engaged in public relations efforts on behalf of Amateur Radio.

The Board also named Eric J. Lagerstrom, KN6FR, of Seaside, California, as the recipient of the Herb S. Brier Instructor of the Year Award for 1996, and Bruce D. Weaver, K3LTM, of Knoxville, Pennsylvania, as the recipient of the Professional Educator of the Year Award for 1996.

"Rick" Lagerstrom says this about his training philosophy: "Tell me and I'll forget. Show me and I'll remember. Involve me and I'll understand." Lagerstrom believes that a trainer's missions are to motivate, generate curiosity, show students how to learn, create a positive environment and to have fun! And his approach works. In just four years of volunteer teaching, he reports that over 600 of his students have passed their licensing exams! Lagerstrom sums up his instructional efforts in this way: "My teaching style is to use every teaching tool available to help my students learn about ham radio."

In just the past four years, Professional Educator of the Year Award winner Bruce D. Weaver, K3LTM, of Westfield, Pennsylvania, has introduced more than 150 students to the magic of ham radio--just as he's been doing for the past 20 years! A fifth-grade teacher, Weaver says he attempts to incorporate many different types of technology into his lessons. For example, in addition to teaching with the aid of Amateur Radio, his students have produced live news programs that air on the local cable system. While his students use

computers in the classroom, Weaver says "The most useful teaching tool I have found is Amateur Radio."

Weaver says that while his original intent was only to show his students what Amateur Radio was all about, he soon realized that Amateur Radio was a great teaching tool, too! One 10-minute contact can lead to an English lesson (how to carry on a conversation), a lesson in map skills (locating the other stations location), a math lesson (on time zones and UTC) or handwriting (filling out a QSL card). "The list is endless," he says of the possibilities introduced to the school classroom via ham radio.

Along with a congratulatory letter, the winners of this year's Instructor of the Year awards each receive a beautiful engraved plaque. This year, the ARRL is proud to have a couple of clubs join our efforts, by cosponsoring two of these awards. Our thanks go to the Lake County (La Porte, Indiana) Amateur Radio Club for its long-time support of the Herb S. Brier, W9AD, (volunteer) Instructor of the Year award. In addition, we offer thanks to the Lambda Amateur Radio Club (Int'l), for cosponsoring the 1996 Professional Educator of the Year Award.

The ARRL Board also tapped Sam Brown, WA4IUM, of Knoxville, Tennessee, to receive the first ARRL Media Excellence Award. In making the award, the Board cited Brown's distinguished career as a professional television news anchor and his "outstanding success" and long-term commitment to promoting Amateur Radio on television.

In addition, the Board selected Bill Carver, W7AAZ (ex-K6OLG), of Twin Falls, Idaho, as the recipient of the ARRL Technical Excellence Award for his article, "A High Performance AGC/IF Subsystem," which appeared in May 1996 QST.--thanks to Rick Palm,K1CE, and Glenn Swanson, KB1GW, for contributing to this report

SOLAR UPDATE

Solar sage Tad Cook, K7VVV, in Seattle, Washington, reports: This week finally saw a welcome rise in solar activity and the accompanying improvement in HF radio conditions. Solar flux rose above 70 on July 19, was above 72 on July 22, and then at 1700, 2000 and 2300 UTC on July 23 it reached 75.6, 75.7 and 75.8, and at the same times on July 24 it was 77, 78.7 and 79. The 2000 UTC measurement at Penticton, BC is the one reported in this bulletin.

The really great news is that with three active regions on the solar disk, this trend is expected to continue, with flux values around 80, 82 and 82 expected for July 25, 26 and 27. Fortunately, there is no expected rise in geomagnetic indices to go along with the increased activity, so HF conditions should remain stable.

R. Brendle wrote to say that he operates several commercial and GMRS UHF repeaters in Eastern Nebraska, and that the seasonal ducting this year is the longest and most sustained he has ever seen. Normally this only happens during overcast and humid conditions during a severe weather watch, but the most recent period lasted over two weeks. On HF, look for excellent

worldwide propagation over the next few days with higher solar flux and continued low A and K indices.

Sunspot numbers for July 10 through 16 were 17, 0, 0, 0, 11, 0 and 0 with a mean of 4. The 10.7-cm flux was 68.5, 68.6, 67.4, 67.1, 68.1, 69.2 and 69.6, with a mean of 68.4, and estimated planetary A indices were 8, 4, 4, 4, 3, 14, and 5, with a mean of 6.

Sunspot numbers for July 17 through 23 were 11, 11, 0, 12, 0, 11 and 31 with a mean of 10.9. The 10.7-cm flux was 69.9, 70.1, 71, 71.2, 71.3, 72.2 and 75.7, with a mean of 71.6, and estimated planetary A indices were 8, 10, 11, 6, 5, 4, and 5, with a mean of 7. /EX

IN BRIEF:

* This weekend on the radio: The Venezuelan Independence Day and RSGB Islands-On-The-Air contests, and The Flight of the Bumblebees operating event are all scheduled for this weekend. See July QST, page 97 for details.

* W1AW seeks 20 meter bulletin reports: A change has been made to the W1AW 20 meter bulletin antennas. W1AW requests signal reports from amateurs who listen to the 20 meter transmissions. Please note QTH, time of reception, mode, signal strength and quality. Use of the standard RST system is preferred. Mail reports on a postcard to W1AW, 225 Main St, Newington, CT, 06111; e-mail w1aw@arrl.org. A W1AW Operating Schedule appears in July QST, page 83.

* Mir back on the air: As US astronaut Mike Foale, KB5UAC, bides his time aboard the troubled Mir space station, he has been active on 2-meter packet and FM voice. Harry Mueller, KC5TRB, in Tulsa, Oklahoma, reports working Foale July 21 on 145.985 MHz FM voice. KC5TRB responded to KB5UAC's CQ. Mueller reports that Foale said he was disappointed that this crew would not get to make the needed Mir repairs, but that he was in "good spirits." Mueller said that Foale "sends his best wishes and a big thank you to the Amateur Radio community" for its support during the Mir crises. From Melbourne, Australia, Chris Edmondson, VK3CE, reports connecting with the R0MIR packet system July 22 on 145.985 MHz and "good copy for the entire high pass of almost 14 minutes." Foale told MIREX CEO Dave Larsen, N6CO, on July 21 that he was having frequent power problems with the TNC and losing messages. "Sorry. No supply store is near at hand," Foale quipped, adding that he was getting ready for the next Mir crew to arrive on August 7. (Note: Mir also uses 145.800/200 MHz--Ed.)--thanks to Rosalie White, WA1STO

* Hams provide communication during flooding: Hams in the Kendall County, Texas, area jumped in to handle health-and welfare-and emergency traffic after flooding struck the area June 22. David McDaniel, AB5UE, president of the Kendall Amateur Radio Society, reports that N5VUO served as net control from the local fire station to coordinate flood and evacuee aid. A Red Cross emergency shelter was set up at a school, and WD5FXZ, WD5FXY and KC5OEG passed health-and-welfare traffic to the local emergency operations center via 2 meters. Also assisting were W5VEO, N5QPU, KA5WJY and KC5WWG. The area

received more than 20 inches of rain in 24 hours. Later that same week, hams in Texas responded to a call from the American Red Cross to provide emergency communication as floods threatened the town of Tildon, Texas (50 miles south of San Antonio). Bexar County REACT enlisted the aid of Ray Taylor, N5NAV, who's active in ARES and the Central Texas Traffic Net. Communication was set up on HF. Reports REACT member Lee Besing, N5NTG: "Within a couple of hours, amateurs packed their gear and drove into town on the Friday night before Field Day weekend. On Saturday, while the rest of the ham world was practicing Field Day, these hams were really having a Field Day under emergency conditions!" They stayed for 24 hours until the flood waters receded. Others involved included N5IJR, WB5YQC, KK5LA, KB5TEE, N5WSW, KC5NUW, KC5IIQ, KC5VCF, KC5IFT, and KJ5PS.--thanks to David McDaniel, AB5UE, and Lee Besing, N5NTG

* Vanity update: The FCC in Gettysburg reports it processed vanity call sign applications received during June. The FCC received 418 electronic applications and 232 paper applications during June. It granted 210 new call signs. Several hundred applications remained in the work in process (WIPS) stack, which FCC personnel have continued to process.

* K2BSA at Jamboree: The Boy Scouts' K2BSA will be on the air from the National Jamboree starting July 28, when some 35,000 Scouts are scheduled to arrive at Fort A. P. Hill in Virginia. The ARRL's Larry Wolfgang, WR1B, is among the 34 adult ham Scouters on the Jamboree staff, along with Ray Moyer, WD8JKV, the BSA National Coordinator, Mike Brown, WB2JWD the overall coordinator, and William Burns, WA6QYR the Radio Merit Badge coordinator. In addition, there are seven Scout youth staff members who are licensed amateurs. "We have been busy building K2BSA this week," Larry reports. "Right now we have a packet station operating in the traffic-handling area and one HF station operational as of noon Friday (July 25)." During the Jamboree, K2BSA will have at least three HF stations operating, plus a satellite setup and a station devoted to digital modes and SSTV. "The traffic-handling station will be another big part of our operation, as we take messages from Scouts to send home as well as receive incoming traffic for the Scouts," he said. A 2-meter repeater (145.17 MHz) is also on the air and fully operational.

* QST Cover Plaque Award winner: The July QST Cover Plaque Award goes to Sam Ulbing, N4UAU, for his article, "My All-Purpose Voltage Booster." Congratulations, Sam!

* FCC seeks comments on Strategic Plan: The FCC seeks public comment on its Strategic Plan. A copy of the plan is available at http://www.fcc.gov/Bureaus/Miscellaneous/Public_Notices/1997/spintro.html. Comments should be forwarded by August 1, 1997, to Kathy Fagan, Room 240E, 2000 M St NW, Washington, DC 20554; e-mail kfagan@fcc.gov.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

* The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

Some parts of Ham Radio, such as most of the HF spectrum, ARE a
secret-rite lodge hall and some people make CW a religious mania.
In some circles, the authentication password to be counted as a "Real
Ham" is a General or above license.

Demonstrating to the government that you Know the Holy Code allows
one to enter the Temple of the Holy HF, the Lower Bands Lodge Hall
where only the Good and True amateurs reside.

1st Good movie. BUT what makes you think she was the license holder.
Why couldn't her father be the ham and she was using his callsign. After
all, what parent goes out and puts together a fully functional station
(Collins rig, amplifier, tower ,etc) for 9 year old??

Just a musing from

Hi all,

Due to the large number of visitors to my homepage I have now put another 'mirror' page on the net. The URLs are:

http://user.tninet.se/~acz732k/
http://hem2.passagen.se/sm0vpo

The page is still growing and more projects will be added in the forthcoming week.

Have fun with QRP (and QRO)/homebrew de Harry, SM0VPO,
(G4VVJ) Upplands V&#65533;sby, Sweden.

1697. question on tech test

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-25 00:00:00 UTC
From: Jan Allbright <wharfrat@pcisys.net>
Message-ID: <33D8DA23.54C@pcisys.net>
Source record: 192989

I am getting ready to take the Technicians Amateur test and
have a question.

Some of the question on the test start by saying "Refering
to NT0-1..." and then go on to ask about controlled or
uncontrolled distances from various antennas and various
freqs running various power outputs.

The question:
Do we get a copy of this table at the test?
Are we supposed to memorize 17 tables?

Help!
Thanks in advance!!

Mike,
Like any other hobby there are a few nitwits in ham radio but for the
most part most are very nice people and very helpful. Don't let a few nimrods
spoil it for you.

By the way, I get my ham radio news from several sources, Packet, the net,
magazines and radio itself.

Tom

> all amateur spectrum -- HF as well as VHF/UHF.

Yes I understand that the authority of frequency coordinators now is
to identify the party responsible for resolving interference between
auxilliary stations. But the concept of the FCC rules requiring
amateurs to accept the authority of amateur frequency coordinators is
not a new one, so I assume it is the details of the plans themselves
that offend you.

Which bandplans endorsed by the ARRL do you object to, and why?

TO ALL AMATEURS IN THE NYC/LI SECTION OF THE ARRL:

An effort has been undertaken to remove Len Buonaiuto, KE2LE, from his position as Section Manager of the New York City/Long Island section of the ARRL.

A Web page containing information on this recall has been established. Members of the Section are urged to read about the allegations made against KE2LE so that they can determine for themselves if KE2LE's actions merit his removal.

The page may be found at http://www.li.net/~jtomason/recall.html

If, after examining the information, you feel that KE2LE should be recalled, please sign the petition, and, when your ballot arrives asking if KE2LE should be recalled, vote YES. Information on how to sign the petition can be found on the Web page, along with the latest news concerning the recall.

Thank you for your time.

Hello sports fans. Little Jeffy has'nt been posting much lately. A quick check of Deja News shows he's cancelling messages at an alarming rate. I would like to invite every ham,cb'er,scanner listener,whatever that the vile little mathmatician has insulted or otherwise has been offended by the thousands of negative posts to contact the Dean of the University of Hawaii. Other interested parties would include the Honorable Senator Inoye and Hazel O'Leary,Secretary of Education. It is amazing the volume of abusive and downright combative posts that this guy has been making through the University. If any of you have un-solicited e-mail from this guy languishing on your hard drive feel free to forward it to the authorities in Hawaii and Washington. Now is the time. Lots of the newsgroup data has been forwarded,a little e-mail will probaly slam-dunk this guy into the un-employment line. Anybody needing help on this clown please send e-mail to kd4cdb@juno.com We'll point you in the right direction. 73

Hi Gang!

I'd like to take a minute to invite you to stop into the Central Michigan Amateur Radio Club's Web Site, as well as the KB8TNQ Ultimate Amateur Radio Page! as soon as you can.

The first Site, CMARC's, is located at: http://www.kb8uyz.com/cmarc and offers information about our club. Additionally, and perhaps our biggest addition to the Site,
(The "Trader's Page") offers FREE SPACE for you to post your items for sale. The guidelines are posted, so check it out.

The second, KB8TNQ's Page, is located at http://www.kb8uyz.com/kb8tnq and is a great source for those in the hobby and those who are looking to get into Amateur Radio. With links to many other great sites, you'll have to stop in to check it out.

Thanks for your time and be sure you leave your comments and URL in the guestbooks, as we're always looking to add new ones.

7-3,
Jim KB8TNQ

I am seeking to acquire examples of the German Enigma Machine(s) as used by German armed forces during WWII. As I have a general interest in signals intelligence etc, I would also consider examples of the Hagelin M-209 as produced in large numbers by the USA and the Adler model c.36 purchased by the French for use in 1939/40.

Other equipment used for the encryption / decryption of messages may also be of interest.

Please e-mail any details / offers to me [jalex@easynet.co.uk] and I will get back to you asap.

John Alexander
Leicester, England.

My experience with AES has always been good. They seem to be one of very few stores that care if you are happy with the equipment you receive and with your purchase in general. I was unhappy with an Icom IC-T7A, had a slight problem with the scan feature, and they agreed to give me full credit on an IC-W32A.

When you order something they will tell you if it is in stock, and ship it that or the next day. I usually get two day service from Milwaukee to Nebraska. If its not in stock at one store they will check their other stores, on computer, and ship it from there. I have delt with several salesmen from different stores and they all seem to be friendly and helpful. The only store I have walked into is the Las Vegas store, and everyone was friendly and helpfull.

>n3iyr@rmii.com
>Thanks!
>GlenN3iyr
I just answered my own question today.
I looked everywhere on the internet and nobody seemed to have a mod for the Kenwood TM-261 2 meter FM radio. After some tinkering (the Amateur way) I discovered this simple mod.

Remove two screws holding top cover on the radio.

Locate two looped wires on the circuit board near the front face of the radio
. The two wires are next to a small IC and jump over two contacts labeled W1 and W2. Cut the wire between W1. Leave W2 wire intact.

Then hard reset the radio by holding in MR and turn the power on. When

you see all of the LED display fill up hit MR on the radio again. (don't use the hand mic).

You will have to re-enter all of your memories again, but you will now have TX and RX from 136-174 mhz. In an emergency it might come in handy.

Very best wishes es GUD DX!

Hello
I am new to Ham radio, and for my first radio purchase I chose the Yaesu FT-50RD. This decision was mainly based on the seemingly large number of features that it provided and the large bandwidth. I, being new, would appreciate any insight that fellow owners may be able to offer as to features or abilities that this radio may have that are not presented in the owners manual, but do exist. Please contact me here or through my e-mail at "frenz.3@osu.edu". Any information, insight, or just chat would be appreciated.

Thanks
Dave

I might agree with you, except without the ARRL, we won't have anybody representing us. I would rather have bad representation in Washington than none at all.

I was taught as a young manager that anybody can find fault. The smart guy finds answers to the faults. An answer we need is how to get representation in place of the ARRL. Divided we fall! Without ARRL, and no replacement, we -WILL- fall.

I will stay with the ARRL until you start a better organization which will support us, instead of destroying what little we have now.

Yes, your right. But I think we need more then one group to support Amateur Radio other then the ARRL. Total Power Just don't work. Just like the US has more then one group in power. we need more group's started so that all Amateur Voices can be heard! Not just the ARRL voice.

I 2nd that! :) I will not send them a penny till I see that 1. all the
14.313's removed and this code thing keeped the way it is! I think we
need another group started too. The more group's there are the more
change for all Amateur's to be heard. I don't feel the ARRL is doing a
very good job. I don't feel one group of people should be given total
power! Look at the US, No one group has total power. The US has more
then one group. To keep things right. It don't work very good eather.
But
it work's better then one group in power.

Well I know people that are tone deaf and can't get the fcc to let them
take the light test! So there is a problem in the law in that area. But
other then that code should stay a part of the test. I don't care how

much the Amateur Radio Company's cry. That the real people that want the code droped. For thay see all them CB'er's getting into Amateur Radio. one's that now spend big money getting 500.00 Radio's and Power for the 11 meter bands. Then if the Code is droped the Amateur Radio Service is done for! 14,313 all across the bands! :(CB'er by the 1000's will get there Amateur Radio License's and you know the rest of the story! :(

Well that's a brite idea. one small problem with that. You'll end up
getting all the good ham's ran off to. For you'll get the people
thinking all ham's are killing people and kids with our radio waves! :(
Bad or Good, We all do that! :(So now I think you can come up with a

better idea then that I hope?

Must have been a long time ago, Jim. Since the Carterphone decision of
the mid-70s, you've been allowed to attach anything you like, including
modified telephones, to the telco network as long as you use a registered
access arrangement and maintain levels compatible with the telco network.

>NOISE!!!

Impulse noise has a very broad spectrum, while the signal of interest
usually has a very well defined bandwidth. An ideal noise blanker
should be able to distinguish between these two, but this has to be
done before the main selectivity filters of the receiver. If the large
impulse is allowed to enter the narrow filter, it will cause severe
ringing, which continues a while after the impulse has disappeared
from the input, thus some delay is required before the signal path is
reopened. However, a better approach is to short the signal path
before ther impulse enters the narrow filter.

Traditional noise blankers have usually filtered the input signal to a
few hundred kHz bandwidth and then used a simple diode detector to
detect the presence of the impulse. This assumes that the broadband
impulse power within that bandwidth is larger than any narrow band
signals in that bandwidth (actually stronger than the vector sum of
all narrow band signals in that bandwidth).

Single band receivers (such as CB) can have quite tight fixed front
end filters or traditional ham-band only receivers had tunable
preselector filters before the first mixer. After the first mixer, the
first IF amplifiers (typically at 9 MHz or 10.7) had some gain and
some selectivity (in order of 100 kHz) and was then mixed down to 455
kHz, where the main selectivity filters were installed. It was quite
easy to pick out the noise blanker input signal after the first
IF-transformer (bandwidth (100-200 kHz), rectify it and use it to
control the shorting the signal to ground in some later stage before
the second mixer. This works quite well when all the narrow band
signals are about the same strength and the broadband impulse is much
stronger than the combined waveform of the narrow band signals.

However, this kind of approach (distributed gain and distributed
selectivity) has a mediocre dynamic range for strong signals within a
few hundred kilohertz from the wanted signal, even without the noise
blanker. In this case, the initial assumption that the total broadband
impulse power is larger than the vector sum of all narrow band signals

is no longer valid, but it does not matter much anyway, since we have dynamic range problems even without the noise blanker.

OTOH, modern general coverage receivers do not have any front end selectivity (apart from octave wide fixed input filters) and the signal is upconverted to 40-75 MHz range. After the mixer, there is usually directly a 20 kHz wide roofing filter and after this the first IF amplifier. It is hard to find a suitable place to take out the noise blanker input signal. You can not take it before the mixer, since it bandwidth is far too wide (several MHz) and it is not much use of taking it after the roofing filter either. The only sensible place is to put a passive power divider between the mixer and the roofing filter, but then you have to provide your own band limiting for the noise blanker signal. If you manage to generate a good noise blanker control signal, where should the signal path be shorted during the impulse ? It must be after the noise blanker input takeoff point, otherwise, we do not know when the impulse ends :-). However, the impulse should not be allowed to enter the roofing filter to prevent ringing, so the shorting must be before the roofing filter but after the noise blanker signal takeoff point. This would require a quite complex diplexer between the first mixer and the roofing filter. However, losses should be minimized at this point to maintain a reasonable noise figure (if no RF-amplifier is used), making the diplexer design quite complex.

In simple traditional receivers adding a noise blanker is practically free (one or two diodes, a few capacitors and resistors) but to make a usable noise blanker would require some serious design efforts in modern general coverage receivers.

(From the Honolulu Star-Bulletin newspaper)

COAST GUARD PLANS TO DISMANTLE STATION

HONOLULU - The Coast Guard has released a draft environmental assessment for its plan to shut down and dismantle the Omega navigation station and antenna in Haiku Valley.
The station is part of a worldwide navigation system for ships and planes. The station will cease operation in September and the Coast Guard is responsible for closing the facility.
Among the plans included in the assessment are:
- Dismantling and lowering the antenna, which consists of six 7,200-foot cables 2,000 above the valley floor.
- Restoring or closing the 3,922-step Haiku stairs, popularly know as the "Stairway to Heaven." The city has announced plans to acquire the stairway and open it to the public.
- Closing and sealing a transmitter building. Other structures may be demolished.
- Cleaning old dump sites.
The Coast Guard has determined that the closure activities will have no significant impact on the environment. The deadline to comment on the draft report is August 1.

>
>

Actually Larry, we all do. By keeping referring customers to a particular dealer or manufacturer, we keep the other dealers and manufacturer's continually trying to gain our business. They do this through better pricing, better service, better features, etc., etc.

Sooner or later, someone tries the "other" guy and tells his friends to try them. If enough try the #2 guy, you know the former #1 guy is going to do what he has to get that business back. So in effect, by continually referring a limited group of consumers to a finite set of suppliers, we in fact are getting commission)s), by keeping pricing competitive.

C l o s e d C i r c u i t A d v i s o r y

The following advisory is not necessarily for transmission over amateur radio. This is just a reminder that the address for the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California 91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1040 for release on Friday, July 18 to follow.

(*****

The following is a QST

A big success for SAREX and a warning from the FCC not to modify any radio to listen in on cellular communications. These stories and more on an expanded Newsline report number 1040 coming your way right now!

(*****

SAREX SUCCESS

Kids, schools and the crew of the space shuttle Columbia have teamed up to make the last SAREX flight of 1997 an overwhelming success.

SAREX onboard the U.S. Space Shuttle Columbia and Mission STS-94 have compiled an impressive number of school contacts. Mission Commander Jim Halsell-KC5RNI, Donald Thomas-KC5FVE and Janice Voss-KC5BTK are scheduled to contact a total of seventeen groups during the STS-94 mission. All SAREX school contacts are the result of a rescheduling following Columbias aborted STS-83 mission and premature return to earth.

The crew aboard Columbia got a pleasant surprise on Tuesday, July 8th when contact by amateur radio was made with Mike Foale-KB5UAC aboard the Russian Space Station Mir. It was reported that KB5UAC invited the shuttle crew to come aboard Mir, but was politely turned down.

One of the contacts getting the best publicity took place in Los Angeles on Friday the 11th. This, when students at the Center Street School in El Segundo got to talk to shuttle Pilot Susan Still on Columbia. That contact was carried live on one of the top rated morning news programs, Good Day LA. Fox television's KTTV channel 11 dispatched reporter Dan Springer with a news crew with a microwave truck to the school. Anyone tuned into Good Day LA got to see and hear many of questions asked by the students.

The school also had a television tv program of its own on a local cable television system. Hosted by ham radio educator Gordon West, WB6NOA and one of he students, it started airing about 33 minutes before the contact with Columbia was made.

(Via Newsline, Amateur News Weekly, WB6NOA)

(*****

FOAL AND MIR EVA

U.S. Astronaut Mike Foal, KB5UAC, on the Russian Mir space station is in training to help make repairs to the stations damaged Spektr module. This following a decision by Russian controllers to sideline Russian commander Vasily Tsibliyev, who is suffering from heart Artemia. Foal will keep up the training as NASA ponders the decision as to weather or not it will permit him to take part in the intra-vehicular spacewalk.

(Via K6DUE)

(*****

SCANNER WARNING

The FCC is warning individuals and companies that offer to modify scanners or any other receivers to permit them to listen in on cellular telephone frequencies that this activity prohibited by federal law and FCC rules. The July 10th directive says that scanning receivers must be FCC certified and incapable of readily being altered by the user to pick up the cellular bands.

The FCC went on to say that modification of scanners on a substantial scale to receive cellular frequencies will be considered to constitute manufacture of such equipment. This says the regulatory agency is in direct violation of federal law and FCC rules. The FCC added that any entities engaged in such activity is cautioned to cease advertising and / or performing any such activity immediately or face tough punitive action.

(Via FCC release)

(*****

DIGITAL REALLOCATION

The Commission has also modified the license privileges of those holders authorized to operate commercial digital electronic message service systems in several microwave region bands. The action prohibits the use of the 18 GHz band after midnight, January 1st, 2000, subject to FCC determined conditions.

(Via FCC release)

NEWSLINE ANNOUNCES N5ZGT AS 1997 YHOTY WINNER

The "Duke City" Albuquerque, New Mexico is the place that gives us and you this years Young Ham of the Year Award winner. His name is Brian Mileshosky; his call sign is N5ZGT and he is the epitome of what everyone believes a young ham radio operator should be.

Brian was on a cellular telephone at a Boy Scout in rural New Mexico, over 150 miles from home, when Capt. Larry Zettwoch, KR4IF who heads up our Awards Committee and I brought him the news.

"Well, congratulations. You were selected by three individuals who reviewed your package along with some other packages. You were a unanimous decision that you be the 1997 Young Ham of the Year." Zettwoch

"Great! Glad to hear that." Mileshosky

"How do you feel?" Bill Pasternak, WA6ITF

"I don't know." Mileshosky

After it all sank in for a few minutes, we got the opportunity to ask Brian if he had any words of encouragement for other young hams. Brian had plenty to say:

"Don't just get your license and sit around with it. Advance and excel in the hobby. Do everything you can to make it a better place because as youth, they are the future of this hobby. They are the ones who will make it fly or crash to the ground." Mileshosky

Brian Mileshosky, N5ZGT, was chosen 1997 Young Ham of the Year based on his total dedication to the service and the people in it. Even though he is only 17, he already holds a General class license, is an Eagle Scout who recruits other new young hams through scouting; is President of his local Explorer Post, a regular net control station, the youth columnist for Worldradio magazine. In fact there is so much more that we really do not have the time to report it all.

One thing we do want to tell you is that one of Brian's career aspirations is that of becoming an astronaut. He will be entering the University of New Mexico this fall to begin a full four year course in engineering, but before that he will get a chance to find out what astronaut training is like. This is because as a part of his award Brian received an expense paid week at Spacecamp courtesy of CQ Magazine. He also gets to spend the weekend of August 15th through the 17th at the

Huntsville Hamfest courtesy of Yaesu U.S.A. corporation. We at Newsline will be presenting Brian with the award plaque which is this year sponsored by Dave Bell, W6AQ of QRZed Media Corporation. This presentation will take place the evening of August 16th at the Huntsville Hamfest grand banquet. Obviously we will be there to bring you all a live report.

NEW JERSEY TVI LAWSUIT APPEALED

An update on a story we first reported on three weeks ago. Neighbors who failed in an effort to sue New Jersey radio amateur Walter Kornienko, K2WK as a nuisance for interfering with their TV and other home electronics have appealed the case to a higher court.

In April, New Jersey Superior Court Judge Reginald Stanton said that federal law prevented him from declaring ham radio interference a nuisance in the case against Kornienko. The plaintiffs; Kornienko's next-door neighbors, Leopold and Karen Korins have now appealed what they see as an unfavorable decision against them to the New Jersey Superior Court's Appellate Division.

Bob Shelton, N2EDF, a retired New Jersey judge is acting as an advisor to the case. He says that in court remarks before rendering his decision, Judge Stanton said that Kornienko was operating legally and properly. Also, if not for the federal preemption issue, he would first require the Korinses to take measures to prevent the RF interference in their home before restricting Kornienko's hamming activities.

Shelton said members of the Sussex County Amateur Radio Association purchased filters to alleviate the RFI, but the Korinses refused to let the club members install them. Shelton also said that Karen Korins' negative remarks in court about Kornienko's antenna towers has led him to believe that the issue goes beyond RFI.

Kornienko, an avid contester, already has spent more than $10,000 on legal fees in the suit. He has permission from the township for his 48 and 90 foot towers. He also has some verticals on his property. The Kornienkos live on 3.5 acres on a hilltop in a rural section of Sussex County in New Jersey's northwestern corner.

(*****

NEW FCC CONSUMER INFO NUMBER

Speaking of RFI and TVI problems. Word that the FCC's old Consumer Assistance number in Gettysburg, Pennsylvania is being discontinued. All calls now should go to the new, toll free number, (888) 225-5322.

For the time being, calls to the old number will ring over to the new number after a little message that informs the caller of the change.

HAM PILOT LIFE SAVER

Ham radio operator and pilot Leonard Westbro, W7MCU, of Kent, Washington is a real life hero. Westbro is credited with saving the lives of his three passengers after his small plane crashed and broke up in a glacier canyon in British Columbia in late June.

According to Western Washington ARRL Section Manager Harry Lewis, W7JWJ, one of those on board received a fractured vertebra, but the others were not seriously hurt. Westbo was able to use the plane's radio to transmit its location to rescuers. The four were on a fishing trip when the plane went down after its engine apparently failed.

CHAVERIM GATHERING

And more than 100 members of Chaverim International from the U.S. and Canada met June 6th through the 8th in Ellenville, New York for the organization's 11th annual convention. For those unaware, Chaverim is the Hebrew word for friends and at this friendly gathering a lady ham, Dorothy Halpern, WA2IOR, won the organizations "Man of the Year" award.

(Via Chaverim)

(*****

NEW RS-15 PROBLEM CAUSED BY QRO OPERATORS

In ham radio space related news, six months back RS-15 was self-switching all it's systems off soon after entering eclipse. Then about two months ago the bird began to function well into shadow. Now its reported that RS-15's transponder and beacon is now switching off even when under solar cell battery charge in daylight.

This effect is evidenced whenever high power uplink stations come up on the transponder. The satellite switches off but normally recovers within a few seconds, only to switch off again when the high power operators re-appear. Users of RS-15 are being cautioned to use as little uplink power as possible to maintain communications unless they want RS-15 to disappear in the middle of their QSO.

N6TX PERMANENT AT SETI LEAGUE

Dr. H. Paul Schuch, N6TX, has become full time Executive Director of the SETI League Inc. Dr. Schuch has been on sabbatical from his teaching job at a Pennsylvania College the past year so as to serve as the SETI Leagues Executive Director. He has now signed a five year contract with the group to continue on full time.

For those of you not aware, the SETI League is a non profit organization devoted to a scientific, privately funded search for extraterrestrial intelligence. One of its research projects uses the talents of hundreds of ham radio volunteers in a highly scientific search of the cosmos for signs of extra-terrestrial communications aimed at earth.

NEW HAM REGULATIONS IN POLAND

And scanning the globe this week we learn that the National Radiocommunications Agency of Poland has announced a pair of new classes of Amateur Radio licenses. The Class 3 includes a 5 WPM Morse code test and

authorizes operation in parts of 75, 10 and 2 meters and 430-440 MHZ.

Also, the new Polish Class 4 license has no Morse code examination and authorizes operation only from 144 to 146 MHZ. In many ways its Polands' equivalent of our codefree Technician class ticket in that Morse code and voice operation is permitted. Unlike the United States, maximum output power is limited to no more than 15 watts. IARU band plans are observed by both these new classes and the he minimum age to get a license is 12 years. Call signs begin with the prefix SQ, followed by the usual call area numeral and a three letter suffix.

(Via the Polish national Amateur Radio Society)

(*****

NEW HAM REGS IN FINLAND

The Finnish Amateur Radio League advises new regulations for that nations radio amateurs took effect on April 1st. Some of the key changes include 3400 to 3408 MHZ in the microwave region be made available to holders of general or technical licenses. Also, output power is increased to 1 kW on HF and 150 watts CW or 600 watts PEP on VHF and third-party traffic rules have been eased.

(Via ARRL)

RAC SECTION MANAGER ELECTION RESULT

Also congratulations to Ralph Webb, VE7OM. Webb was recently re-elected Section Manager for British Columbia, Canada. His two year term of office will begin on October 1st. Ralph ran unopposed, eliminating the need for a balloted election.

(Via RAC)

(*****

DX

In DX, the 1997 PNW DX Convention will be held July 25th, 26th and 27th at the Richmond Inn, Richmond, British Columbia. The Saturday seminar speakers so far include VE7BS and VE7RG. The Saturday evening banquet speaker is Dr.Gilbert Robinson, W5NYT who was an administrative scientific director with NASA for many years.

On the air, JH4RHF, JR4DUW and JR4PMX are planning to trip to Lord Howe for their summer vacation during the IOTA contest week end. The operation will be July 24th to the 29th. Callsigns should be VK9RH, VK9YL and VK9MX, respectively. Listen for them on 80 through 10 meters and QSL via JH4RHF.

And if you're up for some real listen only DX, Phil Karn, KA9Q, says that the downlink frequency for the Mars Pathfinder is 8.420 GHz. For more information go see Phil's Mars Pathfinder X-band Downlink Link Budget page

on the world wide web.

(Via DX sources)

RARE GRIDS

A six meter operator in an Recreational Vehicle has written to QST Magazine writer Emil Pocock, W3EP, with an unusual offer. The ham says that he likes to travel about the West and has offered to operate six meters from rare grids, if only he knew what they were! He requested a list of the most wanted grids.

Emil says that this is your chance to work what you want. He says to send him a list of your most wanted grids, but keep it within 20 or 30! Emil will post the results to the VHF reflector if there is sufficient response. Send input by e-mail only to: w3ep@arrl.org

(Via AMSAT-NA BBS)

(*****

GET WELL WK6R

And finally, we know that you join in sending get well wishes to former ARRL Hudson Division Director Dr. Richard Sandell, WK6R. Sandell is home recovering from laparoscopic surgery to remove his gall bladder.

Word is that Dr. Sandell was admitted to a New Rochelle, New York Hospital shortly after the end of Field Day activities June 29th. He was well enough to return home a few days later to celebrate his wedding anniversary by attending a Broadway musical with his wife of 29 years. Get well wishes go to WK6R at his Callbook address.

actually, ANY receiver can become a transmitter with two or three
changes, and without addiing any parts from radio shack.....the RF amp
will be the AF amp, and it isnt very efficient, but it can be done,
and makes a grea emergency locator beacon....

The following is a QST

Auckland hams loose the bottom end of six meters but nobody else in the South Pacific will be affected. Also, Canada's national ham radio society takes a look at its HF bandplans as the United States moves towards changes in the same spectrum. These stories and more on Newsline report number 1041 coming your way right now!

(*****

ZL 6 METER TRANSFER

Six meters is not being reallocated to the broadcast services throughout the South Pacific as some on the Internet are saying. A recent posting to the VHF Reflector expressed concern after Auckland, New Zealand six meter operators were advised by letter on June 28th that the bottom portion of the ban had been transferred to a television broadcaster. That has made many hams in the region wonder if they will be next and they have been expressing their fears to the rest of the worldwide ham community using cyberspace.

A look at the scenario for the past 38 years may add some clarity to the situation. New Zealand had and exclusive amateur assignment of 50-54 MHz until late in 1959. With the introduction of the television here, the amateur assignment was changed to 51-54 MHz and 45-51 MHz was reserved for VHF TV channel 1. In the late 1980's, to early 1990's the Ministry of Commerce, the New Zealand licensing authority, allowed amateurs, by permit, to operate in the 50-51 MHz region in those locations where TV channel 1 was not in use. This allowed some amateurs to use that vital bottom end portion of the 6m band for some serious dxing.

In 1995, New Zealand radio amateurs were advised that the Ministry of Commerce had created frequency management rights for VHF television, including the band 44-51 MHz. The creation of these rights enabled tradable licenses to be issued to operators of New Zealand principle television services. The bad news for New Zealand amateurs, was that the creation of the management rights automatically invalidated all radio apparatus licenses for the band in which gets the rights were registered. In this case, all amateur licenses in the band 50-50.15 MHz.

The Ministry of Commerce made known its intentions to, as far as possible, allow continued operation by amateurs in this band. Following the registration of the management rights in August of 1995, the Ministry registered a multi-user license in the band 50-51 MHz. Any amateur who wished to transmit under this multi-user license could do so by entering into a contract with the Secretary of Commerce. This contract and license enabled operation in the band 50-51 MHz on the same basis as the previous permits. Amateurs who lived within 50 km of a channel 1 coverage area, or translator input, were required to have their installation tested prior to being offered a contract allowing them to operate.

This system is still in place today. Current comment about the 6m allocation in New Zealand has resulted from introduction of an addition television network. With transmission on VHF TV channel 1 in the city of sails, Auckland. Current 6m bottom end of band permit holders, who reside within the new channel 1 coverage area were advised that as from the 16th of June, their permits for operation were no longer valid. It is understood that amateurs that are on the extremities of the channel 1 coverage area may after appropriate non-interference testing have their special permits reinstated.

A complex situation for a very special amateur band.

Ironically, access to 6m is on the rise world-wide. Only hams in a part of New Zealand are affected by the change.

(Via Newsline)

(*****

RAC HF BANDPLAN REVIEW

Radio Amateurs Canada has decided to review that nations High Frequency bandplan. This, following proposals emanating from the U.S Amateur community which the Canadians say will impact their current band usage.

According to Ken Pyke, VE3OGM, the objective that Radio Amateurs Canada has in mind is to formulate a comprehensive and workable HF Band Plan for Canadian Amateurs which takes into consideration Region 1 and 3 HF Band usage. Pyke says that The Radio Amateurs Canada High Frequency Band Plan Committee is looking for committee members, hopefully two from each Region, who would be willing to help evaluate input from all HF interest groups including SSB, CW, AM, Digital and slow scan amateur TV. Pyke adds that Radio Amateurs Canada will be looking for this input from the overall Canadian ham community as soon as they have the committee members in place.

(Via Radio Amateurs Canada)

(*****

FCC ACTS ON DISH PREEMPTION

The Federal Communications Commission acted on Tuesday, July 22, to preempt a local Kansas law restricting the installation and placement of receive only direct broadcast satellite dishes.

The FCC said the Meade Kansas ordinance requiring a dish installer to obtain a permit and city approval on the placement of the dish conflicted with the commission's preemption rule. The Federal Communications Commission's Cable Service Bureau preempted the ordinance saying "it conflicts with a federal rule in this area." It said Meade's permit provisions are not justified by safety or historic reasons. Also that the rule unreasonably delayed or prevented installation of home satellite dishes.

In taking this action, the FCC has put the teeth of enforcement behind it 1996 rule that prohibit local government or private restrictions on the installation or use of satellite dishes that are one meter or smaller in diameter. Its not known if Meade city planners will challenge the FCC decision in the federal courts.

(Via FCC Release)

(*****

FOALE WON'T FIX MIR

Russian space officials have told the three tired men aboard the Mir space station that they will return to Earth without completing repairs the Mir. In a thirty minute video conference on Saturday, July 19th, Mission Control told the Russian-American crew that two Russian cosmonauts scheduled to arrive next month would repair the Mir's Spektr module.

The decision to wait for a new crew also means that American astronaut Michael Foale, KB5UAC, won't take part in the tricky repair operation. As reported last week, Foale has been in training to replace the ailing Russian commander on the repair mission. He continues to operate ham radio from Mir.

As previously reported, a cargo ship collided with Spektr on June 25th. The collision punched a hole in the module and causing the station to lose half its power.

(Via news reports)

(*****

M2 AND MIR

And while on the subject of the Mir, the July 18th edition of the Fresno Bee carried a front page Business section story on Mike Stahl, K6MYC, and his M-2 Antenna Company. The story titled "FRESNO, WE HAVE A PROBLEM" tells how an antenna manufactured by M-2 kept Russian space station Mir in contact with NASA after an on-board fire severely damaged the station earlier this year. According to W6KGF the Fresno Bee story notes that the earth-based antenna designed by K6MYC that kept the radio contact clear and continuous.

ARRL BOARD OF DIRECTORS MEET

The ARRL vows to fight to protect amateur spectrum and puts restructuring ham licenses on hold.

The League's Board of Directors, meeting July 18th and 19th, has resolved to support legislation providing statutory protection for amateur frequencies.

Board members cite the potential threat to amateur frequencies from the federal government's policy of selling spectrum to the highest bidder.

Board members put a proposal to revamp the ham radio licensing structure on hld. Noting that there's no clear consensus in the wake of suggestions to restructure the system, Board members vote to extend the period for member comments. Back in January, the Board received a committee report containing suggestions on restructuring the license system. Action had been expected this summer. Instead, and until further notice, League members who want their views heard can contact their Division Directors. The Board will revisit the issue at some later date.

Board members also vote to seek primary amateur service allocations of 5650 to 5725 MHZ and 5825 to 5850 MHZ.

Finally, Board members want to see the current voluntary bandplans codified into communications law. Under the League's plan, the current voluntary band plans would be referenced in FCC rules. In taking this

action, the board cites what it calls erosion in the level of compliance with various band plans.

But the Board's action would not make bandplan compliance mandatory. Rather, board members voted to petition the FCC to amend the amateur service rules to state that hams should be familiar with, and should abide by, voluntary band plans applying to the frequencies they use.

The ARRL's leadership took other important actions, we'll have more, next week.

POSSIBLE NYC-LI SM RECALL

A letter urging the recall of newly elected New York City - Long Island ARRL Section Manager, Len Buonaiuto, KE2LE is being disseminated to League members in that Section and nationally on the Internet. Written and circulated by a group of top ARES appointees, it charges Buonaiuto with demonstrating a general misunderstanding of the Section Managers job.

Signing the letter are New York City District Emergency Coordinator Marc Kaufman, WB2DWC, Section Emergency Coordinator Mario Maltese, WF2T, ARES Emergency Coordinator Jim Everett, WB2ZIE, Suffolk County Deputy RACES Radio Officer Joe Tomasone AB2M and others. Among the charges they bring is that Buonaiuto solicited volunteers for District Emergency Coordinator positions for the boroughs of New York City via APRS packet during the end of June. This, even though each borough already has an established Emergency Coordinator.

They also say that they are also angered by Buonaiuto's removal of Andrew Feldman, WB2FXN, from his long time position as District Emergency Coordinator of Suffolk County. They say was done without any form of prior notification or due process.

But in an e-mail message to Newsline, Buonaiuto defends his actions. He says that the entire issue really hinges on his decision to oust Feldman. He notes that a Section Manager retains the unilateral right to remove any appointee but adds that 90% of his predecessor appointments remained upon his taking office. Buonaiuto says that his office will not forced into removing the new Suffolk DEC whom he says that he fully supports.

Surprisingly, those calling for KE2LE's ouster do not challenge Buonaiuto's right to remove Feldman. Rather they are angered because Buonaiuto ignored a long tradition. One that they say calls for fair for review and due process to be followed in such cases.

But there is nothing in the ARRL's by-laws that make such a review mandatory. Also, in years past it has not been uncommon for newly elected Section Managers to fire all previous appointees and begin building his or her on staff from ground zero. Much the same way that the President of the United States picks a new cabinet when elected or re-elected.

As we go to air, no formal recall petition has yet been circulated but it does appear as if one is imminent. In the meantime it seems that this issue is now being fought mainly on the Usenet and in the ham press.

N7MBA TO ADI

In ham radio industry news, word that Jim Newcomb, N7MBA, has become the new Vice President of Sales for Premier Communications. Newcomb brings with him fifteen years of experience in the ham radio industry, including a stint as the National Sales Manager for Icom America. At Premier he will oversee day to day sales and marketing operations.

Premier Communications is the U.S. affiliate of ADI Communications Corporation of Taiwan. ADI has become very popular here in the United States because of its line of low cost VHF and UHF mobile and handheld radio gear for the 2 meter and 70 centimeter ham bands.

HAM NEWSLETTER COMPETITION ENTRIES SOUGHT

The Amateur Radio News Service is seeking entries in its annual competition to identify and recognize what it calls superior performance in Amateur Radio journalism. The contest is open to all ham radio organizations, and membership in ARNS is not required. Prospective applicants should obtain a contest entry form by sending a business-size self addressed stamped envelope to:

Lee Knirko, W9MOL
11 South La Salle Street
Suite 2100
Chicago, Illinois 60603

General circulation magazines and professional journal are not eligible to enter.

ARRL JOTA BOOKLET SUPPORT

The ARRL says that it needs your financial help to keep ham radio printed materials at the Scouts Jamboree on the Air.

JOTA, as the event is better known is held each October. Just before last year's Jamboree On the Air the ARRL Educational Activities Department published its first ARRL Scout Handbook about scouting and Amateur Radio.

Last year's publication was made possible by a grant from The ARRL Foundation, but this year your help is needed so that headquarters can reprint this popular booklet in time for JOTA '97. Please consider making a donation to the ARRL Scout Handbook Fund. Send your gift to the:

ARRL Scout Handbook Fund
225 Main St
Newington, Ct 06111

W8JK MAKES CONTACT

The Columbus Dispatch newspaper comments that if you mention the new science-fiction movie "Contact" to Dr. John Kraus, W8JK, he will respond by asking if anyone saw his books in the film. This is because in pursuit of realism the film's set dresser contacted Dr. Kraus for advice and purchased $500 worth of his textbooks to fill the shelves in the movie scenes.

For those of you not aware, W8JK is an 87 year old professor emeritus of electrical engineering at Ohio State University. He built OSU's "Big Ear" radio telescope in Delaware, Ohio, in the 1950s. Although that instrument pioneered the search for the extraterrestrial life program, film producers set the action at radio telescopes in Puerto Rico and New Mexico. Hams who have seen Contact say that it is probably the best picture so far this year.

BROADCAST HONORS

Martin Vodovoz, WA7TYY, and Steve Scott, KD8S, were among several Society of Broadcast Engineers members inducted into the Nevada Broadcasters Association Hall of Fame on June 13. The event honored broadcasters with 20 or more years of experience. Vodovoz is chief engineer at KLVX-TV. Scott is a maintenance engineer at KUPN. Also inducted were John Holland and Tom Cross of KVBC, and Doug Kramer and Jack Wilkinson of KLAS.

PATHFINDER SUCCESS THANKS TO HAM RADIO

Gordon Wood, WA6NVA, of La Canada, California, credits ham radio for starting him on the path that led to his becoming the chief engineer for communications for the Pathfinder mission. Wood works at the Jet Propulsion Laboratory in Pasadena, California.

The Pathfinder mission has, so far, been a spectacular success and popular with the general public. Wood got into ham radio about 40 years ago, at age 12, when his father bought him an old shortwave radio at a thrift shop. An article July 4 in The Los Angeles Times quotes Wood as saying: "Mankind after all these years is reaching out from his own planet with little toys to snoop around and understand whatever else is out there in the universe."

Previously, he worked on the Mariner, Viking and Voyager interplanetary missions.

1738. Re: Why doesn't the ham radio industry promote itself?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-27 00:00:00 UTC
From: n8blk@aol.com
Message-ID: <19970727201000.QAA05691@ladder01.news.aol.com>
Source record: 192855

In article <33db4dc2.568114@news.sprynet.com>, lar01@sprynet.com (larry) writes:

>But, I am sure the ham stores are too busy making money to worry about
>that.
>
>Ya know, its interesting, we are the perfect sales team. We encourage
>hams to buy their equipment from our favourite dealer but we never
>make a commission on the referal.

Truthfully, I suspect that hams are too cheap to be a major source of profit for ham stores in general. Most of the stores still in business are either part of a chain, (AES, or HRO), or part of a buying group to get lower prices so that the members of the group can compete with the chains. Every year it looks like we lose at least one more major player in the amateur retail business that couldn't make enough money. In Canada, the situation is equally horrendous, with Canadian stores having to compete with U.S. stores selling the same products with a warrantee that's also good in Canada usually. Then to top that off, Radio Shack is skimming off much of what would otherwise be cream for those stores with relatively cheap 2 meter and 440 rigs as well as 10 meter equipment. No, I don't think the retail stores are getting wealthy and frankly, I don't think the manufacturers are either. They'ld love a greatly expanded market with lots of fresh new faces buying their gear from the retailers and new retailers popping up to try to skim off some of the demand. I have to ask though, what do they or you, or I tell a potential newcomer about ham radio? Do we mention the self defeating arguments about code, or the ability of many hams to snub newcomers because either one they don't know code, or two don't act like hams with 40 years of experience? How about the fact that if I set a scanner going that locks in frequencies it's heard on two meters, I find a repeater on almost every available allocation, yet if I key up, and say "N8BLK listening", I rarely get any one coming back. Yes amateur radio can be fun, but it also has to compete with the internet, other demands for money, family, girls for young men, boys for young women, and even work or school. When you add in antenna restrictions, the possibility of suit by vengeful neighbors over interference, and the like, I almost feel like the electronic equivalent of a drug dealer when I help someone become a ham now. Not quite, it is legal, not normally socially destructive, but it's almost sure to be a frustrating time to first become a ham with or without help.

Sure the manufacturers can try recruiting hams, but right now the only mediums that make sense to advertise ham products are

ham magazines and Len Winkler's ham radio and more program
on shortwave. Just how do you expect them to reach the generally
uninterested public in a cost effective way? I don't see ads on cable
working, radio is tricky as it's highly segmented, and newspaper ads
already are becoming unpopular as a means of reaching the general
public. The industry doesn't recruit because recruitment costs money,
requires talent, and great effort that it doesn't have. It's good at
technical gear, but not at selling it. Come on, look at Kenwood still
selling the TS-50 and TS-60, when it pioneered the concept of a
small go anywhere full powered HF rig, good rig, but Alinco and Icom
still offer more bang for the buck now. Now if Kenwood misjudges
the market so badly, how do you expect it to recruit successfully?
I can point to similar problems for Alinco, Yaesu, Icom, and even ADI
in making such judgements. Nice gear, but truthfully the only
source of reliable recruiters is US, the hams who are already interested,
and all too many of us already think the bands are too crowded, and
the ham stores make enough!

If what you're referring to is a continuous carrier, then try shutting off your computer. I had a 12-MHz 286 that put a LOUD carrier right on top of 14.313 MHz. No great loss, actually, since it made it impossible to hear the garbage on that frequency.

Hi all,

Due to the large number of visitors to my homepage I have now put
another 'mirror' page on the net. The URLs are:

http://user.tninet.se/~acz732k/
http://hem2.passagen.se/sm0vpo

This week I have added an SSB AF filter that improved the receive quality
of simple receivers, such as Direct Conversion, FT101B, etc.

The page is still growing and more projects will be added in the
forthcoming week.

Have fun with QRP (and QRO)/homebrew de Harry, SM0VPO, Upplands V�sby.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KA2D, N2OO, NW3K, W3UR & The Daily DX, WD4JNS, K4PK, N4MM, K8CH, KF9YL, 9K2HN, DL1FDV, EA5FKI, G4BUE & DX News Sheet, I4UFH, RW3AH, SM7PKK VE6JY, VU2PAI and ZS5S for the following DX information.

1997 GULF COAST HAM CONVENTION. Bob Walworth, N5ET, President of the Texas DX Society, is pleased to announce that the 1997 Gulf Coast Ham Convention, will be held at Humble Convention Center (location was not mentioned). Guest speaker will be Wayne Mills, N7NG, Chairman of the DXAC. Wayne will do a presentation on his recent Scarborough Reef operation and also on DX in the year 2000. The dates of the Convention are October 17, 18, & 19th. For more details on the convention, contact Bob via E-mail at: walworth@worldnet.att.net

3D2, FIJI. "The Daily DX" reports well known DXer Ron, ZL1AMO, will once again be active from here as 3D2RW from August 13-20th. He plans to be active on 160 meters. On August 21st, he heads to Japan and will be staying with Zorro, JH1AJT. Ron will return to Fiji on September 8th. QSL via ZL1AMO.

4F, PHILIPPINES. The "DX News Sheet" reports that Hans, PA3GKI, a member of the Dutch DX Group (DDXG), will be active from August 8th to October 8th as 4F2DX. While visiting his family, he will be traveling to different islands in DU-land, starting with Luzon Island (OC-042). Activity will be on CW/SSB 80-10 meters. QSL via DDXG direct only.

5A RUMORED, IS JUST WHAT IT IS! Rafa, EA5FKI, states the information that he was going to 5A in September, which was reported by several DX bulletins (including OPDX), is not true. No other details were given.

5H1, ZANZIBAR ISLAND (Tanzania). Fabio, I4UFH, will activate AF-032 from July 27th to Agust 9th. He will be signing 5H1FS and will be active on 160-10 meters, SSB and RTTY. He states he will be using his

Icom 706 and a vertical R7, plus a wire for 80m/160m depending on space availability. He will be looking for the West Coast and JA areas using the normal DX frequencies. QSL to I4UFH through the bureau or direct from the callbook address.

9K6POW (SPECIAL EVENT. ATTENTION PREFIX HUNTERS!). This station will be active in remembrance of the "Kuwaiti's POWs" during the Iraqi occupation of Kuwait. The station will be on the air from August 1st 1200z until August 3rd at 2359z. There is a possibility for RTTY and satellite (AO-10) operations. PLEASE NOTE that this is the first time the 9K6 prefix will be on the air, and maybe it will be the last!! If you are WPX hunter it is your chance to work a new one!! QSL will be via 9K2RA.

9X, RWANDA. Andy, RW3AH, reports to OPDX that he may be active again from here as 9X/RW3AH. He will be here starting August 24th and stay for several months.

AC2P/200 (SPECIAL EVENT). Members of the Long Island DX Asscocaition will operate from the radio room of the 200 year old Montauk Point Lighthouse (located in the rare grid square FN41, NA-026 and USIA NY-03-S) during the National Lighthouse Weekend celebrating the bicentennial of the "Lighting of the Light". Activity will be on SSB on the IOTA frequencies, CW as announced. A special color QSL certificate will be available. QSL via AC2P CBA, SASE please.

AP50, PAKISTAN. Start looking for stations in Pakistan to begin using the special prefix AP50 to celebrate their 50th anniversary of independence. There will be a special certificate available. Listen for details by the operators.

CH6RCH (SPECIAL EVENT). To celebrate 100 years of Orthodoxy in Canada and the first visit of the church leaders to Canada, specifically to Andrew, Alberta, CH6RCH will be active from the QTH of VE6JY. Activity will be from July 26th 0000z through July 27th 2359z, operating on as many bands as possible, conditions permitting. QSL via VE6BEX: Tom Evans, RR # 1 Andrew Alberta T0B 0C0. A color certificate/QSL is available for the proper return postage, otherwise regular QSL cards via the bureau.

DXCC-2000 PROGRAM. During the ARRL's Board of Directors (BoD) meeting, which was held July 18-19th, in Rocky Hill, CT, John Kanode, N4MM, as DXCC-2000 Chairman, presented the BoD with a written report from the DXCC-2000 Committee, and a summary of the committee's recommendations for changes to the DXCC program. The BoD VOTED that the report of the DXCC 2000 Committee was received. The Board also finds that the committee is moving in the right direction. The DXCC-2000 Committee's final report will be presented at the January, 1998, board meeting. The committee's current items on their agenda are discussions on the DXCC Field Representative Program, other specialty DXCC awards, review of the Accreditation Criteria, use of electronic logs, contest log credits, and other DXCC related items the committee wishes to review. At this time, the committee has two major concepts to present to the board for approval. The first concept addresses changes to be made to the DXCC Countries

List Criteria and the second concept addresses the DXCC Awards Structure. [From the Minutes of the ARRL Board meeting.]

KP2, VIRGIN ISLANDS (Also 9M0 and 9M6). Before his big DXpeditions to Spratly and East Malaysia, Bob, N2OO, will be in St. Croix with his XYL Beth, KF2BQ, until July 31st. Also part of the KP2 crew is John, N2LD (ex WB2HPU). Everyone will be signing KP2/callsign after their activity in the IOTA Contest (this past weekend). They plan to have two stations active on CW/SSB on 160-10 meters. JUST A QUICK REMINDER AND UPDATE: Bob/N2OO, Bob/N0RN and others will be using the special callsign 9M6HIL to celebrate the grand opening of the Hillview Gardens Resort (August 5-24th). Activity will be on 40-10 including WARC bands, CW/SSB and RTTY! During their stay (between August 14-18th), N2OO and N0RN will be going to Layang-Layang Island (Spratly) for a sidetrip. They will have 2 rigs and 2 beams and an antenna for 40 meters. They will also operate CW, SSB and RTTY. The call is still not set. It will either be 9M0OO or 9M6OO. They will return to Kota Kinabalu on August 18th and will take a 2 day break at Mt. Kinabalu. Bob, N0RN, leaves August 20th and then Alan, VR2KY/ZL1TX, arrives that same evening where they move back to Keningau to wrap up from 9M6HIL operation until August 24th. The permanent callsign for the Hillview Gardens station after the grand opening celebration is over (October??) will be 9M6AAC. QSL all KP2/callsigns via home calls. QSL 9M6HIL, 9M6AAC and 9M?OO via N2OO.

QSL INFO AND NEWS......
The group from South Florida, who operated from the Little Cayman Island, July 10-15th, and particapated in the IARU HF World Championship Contest, wants to remind everyone to QSL to the following operators: QSL ZF2DN/ZF8 via KP4AM, ZF2DE/ZF8 via N4BP, ZF2PU/ZF8 via W4OVU, and ZF2JS/ZF8 via WD4JNS.

Didier, FK/F5PXQ, has included the following note in his QSLs that he wanted passed along to other hams: "Dear OM, Please note that $1 is equivalent to 100 XPF and stamping for North America, South America, Asia cost 130 XPF. Perhaps can you tell this to your friends and write this in the magazines to inform others OM's of your country."

A reminder from Mats, SM7PKK, currently active as 5X1Z, states that about 70% of individuals continue to QSL to his old address from the CallBook. This address is wrong and he has not lived at this QTH for more than 6 years. Some mail has gotten lost there. PLEASE QSL ONLY to: Mats Persson, Zenithgatan 24 #5, SE-212 14 Malmoe, Sweden.

Jim Wise, W4PRO, reports that he is not the QSL Manager for SV5TS. Anyone who works SV5TS should QSL via CBA.

5K3W via HK3SGP, Francisco "SISO" Hennessey, P.O.Box 170030, Bogota D.C., Colombia S.A. (E-MAIL: hk3sgp@impsat.net)

T9, BOSNIA-HERZEGOVINA. Mario, DL1FDV, will be active from August 24th to September 4th. He will try to be active on all HF bands in CW and SSB. He will be signing T94DX. QSL via DL1FDV, direct or via the bureau. His

address in the callbook is wrong! The correct address is: Mario Lovric, Hagebuttenweg 4, 61231 Bad Nauheim, GERMANY.

V4, ST. KITTS. Joe, VE3BW, will be active again from here as V47CA for two weeks from November 16th until December 1st. He will be an entry in the CQWW CW Contest. Before and after the contest he will be active on the WARC bands. Also, if propagation allows, he will be on 6 meters with a vertical and a 100 watts. QSL to VE3BW.

VU2PAI/50 (SPECIAL EVENT). Pai, VU2PAI, will be active using this callsign until September 31st to commemorate the 50 years of India's independence. QSL direct via Box 730, Mangalore 575003, INDIA. Pai states he is an avid stamp collector, and any (new/old) stamps are welcome to his collection.

W4, SUNSET BEACH ISLAND (NA-112). Don, K4PK, will be activating this IOTA in the North Carolina State West Group from August 2-15th. He plans to be active on the IOTA SSB frequencies on 40, 20, and 15 meters as conditions permit. He will be running his new rig (IC-706) thru a Ten Tec tuner connected to a dipole cut for 80 meters. QSL to: 705 Lenoir Ln, Hardy, VA 24101.

1743. Computer Assisted Circuit Design and Analysis

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-27 00:00:00 UTC
From: Jim <don'twant@junkmail.com>
Message-ID: <01bc9ad7$518d6b80$0c03dbcd@newmicronpc>
Source record: 192860

I have 36 computer assisted circuit design and analysis shareware programs.
If you would like to evaluate any of them I would be be more then happy to
send them to you as an e-mail attachment (can't afford my own ftp site
yet).
They are DOS programs and run very well in Windows 3.xx and 95.
They each have icons for Windows setup.

E-mail me at: jimpy@trip.net

The Circuit Design programs are:
Common emitter amplifier
Opamp band pass, high pass, low pass and notch filter
Opamp astable and monostable multivibrator
Opamp weinbridge and phase shift oscillator
Opamp shmitt trigger and zener regulator
Opamp inverting, noninverting, voltage follower AC amplifier
opamp inverting, noninverting, voltage follower DC amplifier
3 pin IC regulators
555 timer counter astable and monostable multivibrator
Transistor astable and monostable multivibrator
Transistor zener regulator and phase shift oscillator
Passive filters and led resistor calculator

The Circuit Analysis programs are:
ohms law, RC and RL time constant, impedance
reactance, and resistor color code interpreter

Other related programs:
Transistor and 3 pin IC regulator data
Standard resistor value converter
Conversion multipules

1744. HELP..what is our problem?

I'm not very knowledgeable about this area, so please forgive any stupidity on my part. Husband just got a Drake L-4B amp to use with his Yaesu FT-757GX. We just got his antenna (Antron 99?) mounted on the roof. He only talks on the 10 meter band. When not using the amp, we can hear him talking through ALL of our televisions, whether they are tuned to our satellite (C-band) or local channels on regular air.(no big deal) _However,_ when he keys the amp to talk, one of our VCR's cuts out, then shuts off; the large Home Theater TV cuts in & out(it actually shut down the other day while only the radio was on--manual said unplug it for 2 minutes because the electronic protection circuit had activated--thank goodness it came back on); one small TV cuts completely out until he lets off the amp key; and it has little or no effect on the rest of the TVs. He says moving the antenna off the roof & further away from the house will alleviate the VCR & TV cut offs. Is this right? I can't understand what the antenna has to do with this, especially the VCR. Any help? (Our radio guy is away at a hamfest.

Thanks for any help/comments

I think Herbie would die if the the problem on 14.313 was resolved. The constant fighting gives him a reason for living. Sometimes I heard people Jam him and he starts accusing people who are not even at that frequency. I suspect other people on Freq enjoy getting him going and torment the GUY.

Hello,

Name is Gary,
I am considering a purchase of a auto tuner for my ic-706mk-2.
Has anyone bought a Alinco EDX-2 auto tuner and hooked it up to there
icom?
The price seems pretty reasonable and was hoping to get more info.
Any input would be appreciated!

What are you talking about? I have lot's of people looking into the hobby. I have a web page on this topic. Why I support the code is becouse the code is a part of the Amateur Radio Hobby History and has been a part from the very beginning. My Grandfather learned the code before tape's and computers. If he can and did learn the code you can too. One you talk as if the hobby is going down hill. It not going down hill. If the ARRL would do a better job of PR, and keeping the band clear of 14.313's. I seen ham's that where RUDE to newcommers and run them off. That the problem. Not the CODE as you claim. There are Ham's that are RUDE even to me becouse I'm a no-code techician and don't care to up grade. I'm not into DXing or HF. Me and my friends like to talk to each other on simplex 2M. That all we are looking for in the hobby. Now I do support anyone upgrading to HF. But that not for me. I work to much to injoy HF. I'm out working and injoy being able to talk to my wife on my lunch break's and other friends. So don't use the Code. Now I know the CB'ers would love the code droped. So thay can take over the Amateur Radio bands with there 14.313 life. This is also a filter to keep some of the lower life forms out of the hobby. For if you want to get into this hobby thay will learn the code and most that have learned it injoy it now. So you and the ARRL keep doing what your doing. But if the cb'er's and the 14.313 take over the bands. Even I will quit and leave. Not becouse of the code.

Cathi:

Moving the antenna would certainly help, but more important, what kind of ground system do you have? You should have at the very least a 6ft ground rod with at least 14 awg wire running to the back of the radio and amp. Cold water pipes in old homes can be poor sources for a ground.

If your using cheap coax you should throw it away and get a good brand of high shield cable. Belden 9913 I think is the number. Your not going to run 1000 watts through cheap radio shack cable and not experience RFI

This is the part where I get on my soap box, Ask the old man if he knows how much difference there is in his signal strength between 1000 watts and 250 watts. I bet he wont know. The answer is:

You must double your power to increase your signal by 3 db, an "S-Unit" is considered to be about 6 db. So if:

1000 watts = S-9
250 watts = S-8
62 watts = S-7

Is it worth it to pay that high electricity bill for a couple S units of strenth? An S-7 signal is fully copyable. If he's trying to get a better signal look at his ground radial system on the antenna and dont look for the results by pumping more power into a weak radiator.

Best regards, and good luck,

Tim, ka8ddz

Not a problem, Spew. Are you aware of an alternative radio group that
represents about 20% of the US amateurs?

>They lobby the FCC, favoring old, outdated concepts...

Now we get to the crux of your complaint. You don't agree with their
positions, which represent the opinions of their membership.

>This, despite
>the fact that the large (and ever-increasing) majority of hams are NOT
>ARRL members.

What number would be acceptable to you? Would 50% +1 be acceptable?
People get into amateur radio for a variety of reasons. The ARRL is not
going to be the end-all for everyone.

I would hope that someone would be attracted to ham radio due to what he
could do with the equipment, not due to the equipment itself. I believe
we should be recruiting folks who have an interest in building and operating
their own gear rather than trying to hypnotise them by dangling a 2 kilodollar
radio in their face.

Jeff KH2PZ

To: CW - Reflector <cw@qsl.net>
Subject: [CW] NAVY-MARINE CORPS MARS CW IS BACK!!!!

HELLO AND THANKS FOR READING

TONIGHT WAS A NIGHT WORTH WAITING FOR.

IN A RECENT CHIEF NAVY-MARINE CORPS BROADCAST, THE CHIEF NAVY-MARINE CORPS MARS ANNOUNCED THAT DOD HAS AUTHORIZED CW NETS AGAIN. IN SHORT ORDER, WE HAVE FOUR NETS WORKING AGAIN IN LA. WHILE I CAN NOT GIVE OUT THE EXACT DETAILS, THOSE IN SOUTH CENTRAL STATES WILL HEAR ONE AT 2100 CDT JUST A FEW KHZ ABOVE THE 80M HAM BAND. AFTER A WEEK OUT OF TOWN, IT WAS VERY NICE TO HEAR A MESSAGE PASSED BY CW FROM AN ANOTHER MARS STATION TO A NAVY-MARINE CORPS STATION FOR RELAY ON THE DIGITAL NETWORK.

NO I AM NOT JUST HUNG UP ON CW FOR THE H__L OF IT. I WAS NECOS OF A NAVY-MARINE CORPS VOICE (SSB) NET EARLIER THIS EVENING AND COULD NOT HEAR MANY OF THE STATIONS ON THE NET. WITH SIMILAR CONDITIONS (LOCAL THUNDERSTORMS) I WAS ABLE TO COPY A MULTI ADR MESSAGE SENT THREE HOURS LATER VIA CW. IT IS REALLY TRUE THAT CW CAN GET THROUGH BETTER THAN SSB.

YES I KNOW THAT NOT ALL HAMS CAN READ CW THROUGH THE NOISE, BUT THOSE WHO CAN FIND IT EASIER THAN SSB. WE HAD THE MESSAGES PASSED WITH SOME CHAT TIME AFTER THE NET. I HAVE SEEN VOICE NETS TAKE LONGER TO HANDLE LESS TRAFFIC. MAYBE THE WISDOM OF USING A SYSTEM THAT WORKS MAKES SENSE AFTER ALL.

CW WAS NEVER DEAD AT K5KV AND IS REVIVED AT NNN0LGN.

73

Bravo, Dana! You're getting more conservative as you get older. I had
to look twice to see if I wrote the above or not.

A couple years ago on here I suggested folks ask their newpapers to publish
name, callsign, address, and offense (after having ascertained the QTH
of the offending signal by RDF). Newspaper editors are wise enough to
know what language to use so as to avoid legal difficulties: "Foul language
and jamming was heard on the amateur radio frequency of 14.313 MHz daily
last week; local hams used direction finding equipment to determine that
the signal source appeared to be transmitted from 5944 Kemp Drive. FCC
records show that a James O'Brian KD4CDB resides at that address."
Anyone with a conscience would probably be shamed into better behavior -
some would thrive on the attention, though.

Bill (or Steve), could you use more care with the inclusion of commas? I
had to read the above a couple times to learn you really didn't
mean to imply that the FCC "...is in direct violation..." of itself.
I believe you meant to write "This, says the regulatory agency, is in..."

In my opinion, you have just asked the $64,000 question, that every new amateur asks.

I am a Canadian, unfortunately I am not aware of what you licence class offers you in terms of operating priveledges.

But....

In my opinion, the main modes on 30 mhz, and up, are fm voice and packet radio. You only need a typical two meter or dual band, 2 meter/440 mhz, radio for that. A trip to your local ham store will get you that and the latest TNC. The fact that you are on the internet suggests that you have a computer, for packet, already.

You will need a vhf/uhf antenna. Depending on where you live, how close you are to voice repeaters and packet systems will determine whether you need a beam or a simple vertical.

After all that is said, perhaps you should consider contacting you local amateur radio club and asking what the activity, in your local area, is like.

I would be interested in knowing what you eventually chose to do.

The way you stop the ARRL is by NOT supporting them financially. It's simple, really. If you do not agree with their positions and policies, DON'T send them money! Works for me. The ARRL will not get a dime from me until they reverse themselves on the Morse requirement issue.

Whats wrong with the ARRL??

I am somewhat confused. On this forum, I have been reading messages knocking down the ARRL. Of the messages I have read, one called them naz..., which I think is a rather harsh word. However, no one has given me a real reason not to appreciate their existance. I feel sure that if it wasn't for groups, like the arrl, that amateur radio would not exist today, or at least not as we know it.

Amateur radio is being hit from many different directions in an effort to force it/us to give up our frequencies to commercial interests. We need a strong politcal force if we are to keep what we have and to even consider getting more.

We, as amateurs, have not been experimenting with new technologies as the commerical guys have. How many of you, including me, have been doing research into a new mode, eg spread spectrum.

I got my intial membership into arrl in the mid 60's. I dropped out for personal reasons around 1990. I am considering rejoined this fall. Can someone give me a good reason why I should not rejoin?

Greetings Jason

You raise an excellent point.

But, I am sure the ham stores are too busy making money to worry about
that.

Ya know, its interesting, we are the perfect sales team. We encourage
hams to buy their equipment from our favourite dealer but we never
make a commission on the referal.

Greetings Mike

Yes we are a strange bunch. We have the spectrum world at our
fingertips and yet we abuse it.
We have access to the internet and a newsgroup like this one and we
don't do positive adverstisment we do negative advertisment.

I get my ham information from hams that I trust, including magazines.

When I got my licence, in the mid 60's, the hams, that I knew, were very supportive and very positive, about amateur radio. They even discouraged me from using 2 meter voice as voice is a killer of code. They wanted me to get my code speed up so I could get my Canadian advanced as soon as our 1 year waiting period was up.

By the time I got my advanced, I found cw was so enjoyable I seldomly used voice.

Amateur radio, when you wed out the negativism, is a terrific hobby. You have several different modes to chose from, voice, packet, cw, etc and you have a wided variety of bands, all the way from the broadcast band 160 meters to as high as you can get equipment for, and most of them are populated, except for, perhaps, beyond 1296 mhz.

I find, most of the award hunters work cw.

Give amateur radio a chance. Since the mid 60's, I have never regretted the time and effort it took me to pass the exams.

> Larry ve3fxq

Larry, I would encourage you to join the ARRL.

As far as what's wrong with it? Well, as with any political party, there are things we agree with, and things we don't. Some think it is pro-code, others think it is anti-code, some want this and some want that. No organization can be all things at once to all people.

But the ARRL is a democratic organization, like our respective countries. If we want change in our country, the way to do it is to vote, not to leave the country. If we want change in the ARRL, the way to do it is, first join, then VOTE. We can make any change we want within the organization, but only if we join, so we -can- vote.

Some have suggested that they would like an organization that is more in keeping with their ideals, motives, demands, etc. Fine, start such an

organization, and have them represent you. I agree with the writer that said we could have more voices to represent us, just as we do political parties.

But, don't do as some have suggested, destroy the ARRL, and not have an alternative to them. That will destroy our hobby for sure, without any chance for the survival of HAM radio at all.. As I see it, we have three choices, Join ARRL, join another organization that will represent us (start one if necessary), or have no one represent us at all. Only the latter is the road to sure destruction.

As for me, I will stay with ARRL, although I may join other organizations as well, if I feel they support my agenda. The ARRL helped get us our WARC bands at a time when others wanted to take frequencies away from us. They have been our voice in Washington and have prevented others from infringing on our HAM rights. Do I always agree with them? No! But I can vote for a change of director, to one who more supports my views, and I can only do that as a member.

I hope you will join the ARRL. But, whatever you do, don't seek to destroy the only organization now equipped to represent us, without first organizing an alternative. The is nothing the enemies of HAM radio would like more than to divide us to the point where we have no strength at all in government!

Join ARRL!!

>Whats wrong with the ARRL??

In a nutshell, the main problem with ARRL is that they proclaim themselves as the voice of all amateurs. They lobby the FCC, favoring old, outdated concepts such as continued Morse requirements for obtaining a ham license, and they do so on behalf of the entire amateur population. This, despite the fact that the large (and ever-increasing) majority of hams are NOT ARRL members.

The 14.313 mess will continue until the end of time. 'Ol Herbie in the Virgin Islands and his stateside adversaries will continue to jam, accuse, and cuss each other out on a daily basis. Nobody cares. Nothing will ever be done to stop the problem.

Of course, this is another fine example of how wonderful Morse works as a lid filter on HF, as YE OLDE FAHRTZ would have you believe.

I strongly believe that you cannot transmit AM signals with ADI's
AT-600. It is possible to receive AM mode, but shouldn't be capable
of transmitting... If you know anything regarding to this matter,
please let me know.

Unfortunately, the ARRL has little to do with the FCC's lack of testicular
fortitude in correcting these types of problems.

>I think we
>need another group started too. The more group's there are the more
>change for all Amateur's to be heard.

The problem there is that hams are inherently cheap. You'd have to offer
a great deal to get any to join. Any hams that were going to join some
kind of national group have long since done so.

I'm entirely in agreement with you, Larry. The ARRL represents
us all; it maintains relations with the public power structure,
and all *I* personally can see is sweetness-and-light with them.

Being a political organization, there are always going to be
little struggles/factions/etc. Same with every homeowner's
organization and volunteer group I can think of. Is that
a reason to knock the ARRL itself? As you say, nope.

Three cheers for the boys in Newington, is what I says!

>Three cheers for the boys in Newington, is what I says!

We boys and gals in Newington are just the paid staff. We are NOT the ARRL. ARRL is a structure, consisting of HQ paid staff, a representative group of volunteer (unpaid) Directors, elected directly by the popular vote of ARRL members in their Divisions, a field organization of volunteers, managed by volunteer Section Managers elected by popular vote, all the ARRL Members, a large number of committees, most of whom are either regional representation (such as the DX Advisory Committee) or by expertise, such as the RF Safety Committee.

All told, ARRO is a large structure designed to cover a lot of ground and make use of the resources of a lot of people. In essence, those who are willing to participate constructively are very much a part of the process; those who simply sit back and fear the "mighty power of the ARRL" are not.

There ARE already a number of other amateur radio organizations that "represent" various facets of amateur radio. TAPR, AMSAT, QRP ARCI etc., come to mind. ARRL has formed working relationships, formal or informal, with many of these.

I agree with one sentiment I have seen expressed in this thread; if we could form an effective organization better than ARRL, I would be among the first to join it. But I don't think that is likely to happen. Those who are willing to do the amount of work necessary to keep any organization going are already doing so. I have seen Drew offer that we need a new organization. Is *he* prepared to organize, plan and then lead us all to build that organization? I also offer that if someone did build such an organization, it should not be organized fundamentally differently than is ARRL. How else could you organize an organization to be comprised of grass-root components, such as is ARRL?

I think Mr Deignan hit the nail on the head; most of those who are willing to join an organization and stick with it have already done so. Those who are not joiners, or will desert an organization the first time it acts in a way they believe it should not, have not done so.

All in all, I think it is much more effective, for a number of reasons, to try to change the organization we already have, than to try to build a new one from scratch.

I think what he is talking about is resetting the anti-theft system on the
radio. In the 80s, some Delco radios required a reset code if 12 VDC
were removed from them. This was to make them useless to thieves.
The dealership had a book of codes where they could look up the
serial number of the radio and then punch a code on the pushbuttons
to restore the radio to operation.

In order to be considered for the Radio Shack telephone line, a telephone must pass Radio Shack's tests. These tests include a RFI immunity test.

I will add, too, that Radio Shack now carries single-line, HF telephone RFI filters.

Your supposition that because the ARRL does not have a "majority" of hams as members we cannot represent amateur radio is flawed. First, it supposes that all of those who have not joined ARRL have done so because they are aware of the issues and disagree with ARRL's actions. How does this account for those of the 700k+ who are not even alive; those who are not hams in any active sense of the word (such as those who got a license and never ever used it -- I know of a few); those who are family of a ARRL Member, but not signed up as an ARRL Member; those who cannot afford ARRL Membership (there are at least a few), those who do not join anything, ever, those whose membership has lapsed, but they just haven't gotten around to renewing; those who have a VHF-only license and operate only on a local repeater, feeling no need for a National organizatio and, perhaps the largest group of all, those ever-increasing majority of hams who have not yet learned enough about ARRL to have decided whether they want to join.

Let me offer an analogy. I do not regularly contribute to the American Red Cross. If anyone were do analyze this as meaning that I did not approve of their activities, they would be quite mistaken.

No one but you seems to believe that ARRL represents the views of every single amateur on every single issue. When I have served on national and international committees, those with whom I worked did not believe that. What they do believe is to the extent that the interests of amateur radio in general can be represented, ARRL is the largest single voice. In many areas, such as spectrum retention and work like ARRL representation on the ANSI C63 EMC Immunty committee, this is probably ideal.

In other areas, ARRL has never been the sole voice of amateur radio; the FCC entertains a number of petitions from other individuals and organzations; a number of organizations have offered comments on a number of amateur radio matters and, as history has shown, the FCC appropriately listened to all of them, as can be evidenced by the times that the FCC favored some other view, or a "hybrid" view, than that offered by ARRL.

ARRL is a diverse organization, doing a lot of different things. I can see how some might feel that ARRL's actions on one particular issue are so against what they believe to be appropriate that they cannot participate. I do hope that those who do so realize that they are also witholding their support from other areas that they might want to support. I have made the personal choice to support ARRL for what I believe it is doing right and to work as I can to change what I believe to be wrong. I think in that way I get the best of all worlds.

It is quite possible you are mistakenly flattering yourself and your Affiliation. Yes, there would be CBers opting for legal power increases because they believe that to be the cure all and they are tired of hiding so they would move up. There are many tho that have no desire to actively seek out and join what is arguably one of the most snobbish, arrogant groups of people on the face of the earth. Yes, there will be many wannabes just waiting and god bless you all you deserve them.

There was a time when this was a great, respectful, and honored hobby. Take a good look at what you have become. Yes there are still some good people, (mostly old timers) in the system, but by now they have found a good corner where they hang out with like buddies and leave the trash to the trashies. Shame on You. One of the problems is the new comers have no way of knowing how it was in the old days. I am 62 and am looking back to a time BTA (before teen ager) when I helped my father build his dream rigs. I recall many nites when I should have been painting cows or stealing chickens, that I was at home ginding Xtals, or winding coils for the new rig. Guess thats why I'm so retarded now, still can't steal a chicken.

Ah well, to hell with that, you guys have too much new stuff to worry about. You better start with your image, it sucks. I read a great post by a W6V?V I think, and he is concerned with getting good people to join your ranks. He's right, and code isn't your only problem. One of my mentors came all the way from New Jersey to New Mexico to help me and my father once and that was in 1948 or 49. Good people do good things, always. Don't just think about it, do something, or so help me I'll get my ticket and come haunt you all.

La> Whats wrong with the ARRL??

La> I am somewhat confused.

Larry, I first joined ARRL in the '50s, so as an old timer, :-)
let me explain how I see things.

Here in the USA, we were first "planted" by many persons who
had left all contact with civilization, and guided firmly
by their faith in God, set out to bring civilization,
setting up thier first theocratic governments meeting in
their churches which they built as a community, often before
they even built their own home. So with my William Phelps
ancestor who came in 1630.

Those early social institutions/communities then became the
springboard for a new breed, the pioneer, who moved west,
the rugged individualists who dared to fight with their
six guns, against the landholders armed only with bows and
arrows.

This sentiment is still strong in some pockets, who feel that
only one government is not enough, they wish to set up
multiple representation. They set this up in Montana,
they set this up in Texas. They hoped to set up new
governments which they could control to their special
purposes.

So it is with amateur radio. Unsatisfied because they can not
win popular support in an election in this democratic
representitive form of government, they wish to set up
alternate representation that overcomes this obstacle.

So it is with those special interests who can not win
democratically within ARRL. They choose cessation,
setting up alternate representation, unhindered by
their lack of formulating and winning elections for
their position.

And then there were the outlaws. That too.

The only good reason I could give you for not rejoining this fall,
is that amateur radio is immersed in a sea change of technology now.
Don't put it off, join now, get active, get to know the players,
volunteer and get some experience, vote next time personally knowing
the individuals involved.

73, Don n6mce

La> I am considering rejoined

I doubt you can look it up. An HONEST poll needs to be taken of the
wishes of ALL U.S. Hams, not just the wishes of the "good old HF boys"
before the ARRL issues a statement like the last one about opposing
any changes in the code requirements even though the rest of the world
is ready and willing to drop the morse code requirements for amateur
licensing. The League could find a way to do this poll IF they really
wanted to. I don't know how it could be done. We're paying the dues to
you people. You figure it out. And before you ask, Yes I am a member,
although I don't know why I bother.

Good to see the argument taking a realistic turn here, Bill. There are many, many well known ways to do this, and there are organizations devoted to accurate and timely information gathering / analysis. IF the ARRL really wanted to know the wishes of the majority of hams on important issues, it would take some effort to formulate the questions and then some money to hire the right research organization. It would take some committment of money, time and an open attitude.

Yes unfortunately, and mine would lock up at a lower power level.
(100W) It may be entering the computer via any of numerous cables
(power, keyboard, mouse, modem, printer etc.) and locking up the
'puter and then when you type it just appears the keyboard is locked.
I rearranged all of the coax cables and placed them as far away from
the computer and it's cables as possible and then I placed torroids
(got mine from Radio Shack) on all of the unshielded cables going into
the computer and that solved the problem for me. Unfortunately each
installation is unique and you may have to *fiddle* with your
cable/torroid arrangement to get the best results.

To say that the ARRL is not doing any good for the amateur community is a gross mis-statement. I don't agree with all of the League's actions but without the ARRL and its efforts where would amateur radio be?

The membership determines the League's actions. That is how the 'majority wishes' are determined. Every non-member who says the League doesn't represent their wishes is absolutely correct. If I don't vote, I can say that the government doesn't represent me and my wishes. The next step is that since the government does not represent me, I am not going to vote. That is the circular logic that many ARRL bashers use.

If there are changes that one wishes to make, get in the flow. Become a member, join an ARRL-affiliated club and make your wishes known. Back up these ideas with logical assessments of how these changes are to be made and what benefits will result from the changes.

If the majority of ARRL members had voted in favor of removing the telegraphy requirements, the League would be in favor of removing the requirements. Since the majority of members responding to the survey were in favor of retaining the telegraphy requirements, that is the League's position. Is that unreasonable?

The League represents the entire body of amateur radio operators (members or not) better than any other organization that has come down the pike so far. Perhaps in the future a better organization will come along but I wouldn't hold my breath while waiting.

> Why couldn't her father be the ham and she was using his callsign. After
> all, what parent goes out and puts together a fully functional station
> (Collins rig, amplifier, tower ,etc) for 9 year old??

According to a scene later in the movie, her father DID put the stations together to encourage her apparent interest in things scientific. It is true that "W9xxx" calls were not being issued in the mid-70's, but historical accuracy was probably not a goal of the producer. The *real* story behind the use of that call sign is much more interesting. The following comes from Paul Harden, NA5N.

The call W9GFZ was recommended for use by ham consultants at the VLA radio observatory at Sorocco, NM, to "honor" Grote Reber, W9GFZ. The "Z" was changed in the movie to "O" (for reasons unknown).

Grote Reber was an ardent ham who did pioneering radio astronomy work in the 1930's and 1940's. Radio astronomy was "discovered" by telephone engineer Karl Jansky in 1932 while trying to find the source of HF noise... which turned out to be coming from near the constellation Sagittarius, now known to be the center of our galaxy. Grote Reber continued this research as an amateur, designing and building the first dish antenna in his back yard, and making the first radio map of the cellestial skies. Grote is now quite elderly and lives in Tasmania.

The CONTACT Director modeled Jodie Foster's role after two very noted early radio astronomers ... Grote Reber (W9GFZ) and John Kraus (W8JK). Both of these men were hams at an early age, and their experience with HF communications enabled them both to realize that some of the signals they heard were NOT man made (i.e., noise/emissions from space). He thus modeled Jodie Foster's role after them ... to be a ham at an early age and her hamming experience would explain why she was the only person to recognize the signals received in CONTACT to be extraterrestrial.

73, de Hans, K0HB/4ID

PS: As another ham radio tie-in, some sharp-eyed viewers may have noted a bunch of books on a shelf in the movie, written by W8JK. Many amateurs will recognize W8JK as an HF antenna guru of the first water, but a few will also recognize him as a professor (of astronomy) who is now a guru with SETI League.

-The 14.313 mess will continue until the end of time. 'Ol Herbie in the
-Virgin Islands and his stateside adversaries will continue to jam, accuse,
-and cuss each other out on a daily basis. Nobody cares. Nothing will
-ever be done to stop the problem.

I find myself in almost total agreement with Drew, miricles do happen! :)

-Of course, this is another fine example of how wonderful Morse works as a
-lid filter on HF, as YE OLDE FAHRTZ would have you believe.
-
--Drew in Sunny Central Florida-
- KF4DDM since 9/95 on 2m & 10m
- KADF-6895 since 9/76 on 11m
- Active scanner and Internet freak as well
- (no license required)

But here's where our agreement parts a bit. I think that the CW test has
done pretty well as a lid filter. Look at CB. Granted it is FAR from
a perfect filter. I'd really hate to see what HF would be like without CW
as a filter, although it is more of a sieve than a filter. Actually I
really don't mind if CW is eventually eliminated for an entry level HF
license so long as this new license doesn't have CW privileges. A person
should have to show some competence in CW before being allowed to use it.
Wouldn't want him to hurt himself on his key. ;)

I agree using just a cold water pipe is not enough but, IMO good RF
grounding requires a bit more than a single ground rod. One should
also "fan out" several ground wires just below the ground surface too.

While we're looking up statistics, can someone enumerate the
countries that have dropped, or are in favor of dropping, the code
requirement? I've seen single countries, such as New Zealand,
mentioned before, but not much of a list. That is, for HF access,
not the equivalent of a no-code Tech. license.

RIGHT ON!!!

> Your supposition that because the ARRL does not have a "majority" of hams

> as members we cannot represent amateur radio is flawed. First, it
> supposes that all of those who have not joined ARRL have done so because
> they are aware of the issues and disagree with ARRL's actions.

First, the number is so far short of a majority that it *should* be a major
embarrassment ... and it *should* have sent a serious "wake-up" message
to the "leadership" ... never mind the NYC Section Manager ... the
majority
of the BOD should be given the boot ... and Mr. Sumner, too in my view ...
for lack of leadership, lack of responsiveness to the ham community at
large,
and general backwardness/Luddism ...

> How
> does this account for those of the 700k+ who are not even alive; those

> haven't gotten around to renewing; those who have a VHF-only license and
> operate only on a local repeater, feeling no need for a National
> organizatio and, perhaps the largest group of all, those
> ever-increasing majority of hams who have not yet learned enough
> about ARRL to have decided whether they want to join.

I think you're stretching pretty far here, Ed ... most of the people I know
who
are not "members" are deliberately not because the ARRL doesn't represent
their views and they got tired of funding the enemy ... many of the people
I
know who *are* "members" are, as I have said before, more accurately
described
as "subscribers to QST" because that's the primary (or ONLY) reason that
they
cough up the money each year ...

>Whats wrong with the ARRL??

What's basically wrong with the ARRL is that it has no viable competition to keep it on its toes. One party states often beome unrepresentative and controlled by cliques because they have no competition to keep them true to their constituencies (see Mexico). The ARRL is pushing agendas that many of its members, and non-members, do not support (see AFL-CIO political activities as an example of that sort of behavior in another context). And the ARRL claims to speak for people who are not members, IE it claims to be the voice of US amateur radio, but it has a membership representing only a small fraction of licensed amateurs (this is like Christian Identity claiming to speak for all Christians).

Single monoliths can function after a fashion if there are viable elements inside the organization which can serve the purpose of political parties, IE the reformers inside the old Soviet Communist party served this purpose. But such change is slow (over 70 years in the case of the Soviets). I'm not sure amateur radio can afford to wait that long for meaningful reform.

When the article asking for input appeared in QST, the request was not limited to "good old HF boys," it was open to all ARRL members and potential members. The ARRL Directors do not feel that they have heard from enough people, one Director counted about 200 inputs from a Division with over 10,000 ARRL Members. They are asking for more input, from ALL hams. I don't think it gets much better than that.

Drew is very typical of the armchair quarterback mentality exhibited by
many. Sit back, critique and comment but let someone else do all the
footwork. He represents the joiners, not the do'ers. He represents
those who would prefer to tear down rather than construct. He represents
those who continually state that they want change, they need change, but
they won't offer their PRECIOUS time and energy to help start anything.
In other words, they act like LEECHES.

Based on Drew's previous postings to this newsgroup and others, he's
actually the epitome of those who have nothing to offer...in other words
..Burtisms. A Burtism - A repetitive comment that offers nothing in
substance yet continually appears as if by some magical formula on a
regular basis

1830. NEW Comprehensive MUF Predictions Database for HF Communicators

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-28 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <5riujp$qdj1@mars.online.uleth.ca>
Source record: 192839
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.swap

We have generated a new comprehensive global Maximum Usable Frequency Prediction Database for 28 July to the end of September 1997.

This database required over 170 CPU hours of computation time on a high-speed computer system to complete the complex ionospheric signal ray-tracings required to build this database.

Ray-traced results for over 480,000 transmitter/receiver/date variants are included in the database, making this the most comprehensive MUF prediction database in the world for ionospheric radio communications in the 1 to 50 MHz frequency bands.

Select transmitter and receiver pairs from 50 sectors world-wide (over 2,500 possible path variants!) and for any date from 28 July to the end of September. The software/database will then graph on your screen the predicted ray-traced maximum usable frequencies, optimum frequencies, E-layer cutoff frequencies, optimum radiation takeoff angles and more for a 24-hour period that is valid for the path and date selected. Effects of solar activity and geomagnetic activity are included in the prediction results.

This database lets you instantly view possible band openings along almost any path and determine optimum times of the day to communicate with other regions of the world.

Pricing ($20 to $50 USD) and ordering information is available at the URL:
http://solar.uleth.ca/solar/www/predict.html

Contact our main web page at: http://solar.uleth.ca/solar
for a wealth of propagation related information.

> clear of 14.313's.

Sorry OM, the ARRL is a publishing company, they have no more control over what happens on 14.313 than does the New York Times. It costs the government (FCC) thousands of dollars to prosecute. Are YOU willing to pay $10 / year for you ham license so that the FCC can fund these clean up operations?

> I seen ham's that where RUDE to newcommers and run

Yes, hams can be very rude. But code or no code will not change this, nor does it have anything to do with the ARRL.

> Now I know
> the CB'ers would love the code droped. So thay can take over the Amateur

Interesting statment Bob, but it does not make much sense. The people on 14.313 are licensed radio amateurs who have ALL passed code tests to operate HF. It does not appear that this 'filter' you describe is working very well. How many CB'er have YOU talked to that said they cant wait for code to be dropped so they could operate 14.313?

One, Yes I know the 14.313's are higher Class Ham's. But There be more if the Code was not in place. Code don't keep them all out but it help's. For if you have to learn something you respect it more then if you just got it out of a box. :) I can send 13 plus wpm. I just don't want HF. I don't have to time for it. I work 12 to 14 hours a day. I use the VHF amd UHF to keep up with my Friends and Family. When I'm out in my car. I'm a area Supv. for a very Large Cleaning Company. So don't have the time. But I love the code it's Fun to set and copy people on my SW Radio when I'm home. You don't hear all that 14.313 junk like on the Voice Bands. It's not hard to learn it's just like learning German. But you got to want to learn it. Just like History in school. I don't see why when I was a kid. Why I needed History. For you don't use it at Work. But now that I'm a adult and can now see why I had to learn History. Same with the Code on Amateur Radio. You may never use it. But one day you may need it like if we have a War. Code can be heard over ton's on QRM better then Voice or Dig. Form's. So you never Know. See I know code. It took me along time to learn back when I was a kid. But now it's like Reading a newspaper, or Driving my Car. It's easy. :)

2) The ARRL has a Program called The Official Observer Program. There to Report people who act like 14.313 to the FCC. So The FCC can take action. But the FCC don't do anything with this Information when thay get it. Why? The ARRL don't but a Big Enough FIRE under their chair. there not just a Publishing Company as you think. Plus thay are to go to the FCC and Let the FCC know what we HAM's Want. :) But thay do a very bad job. :(So now you know the rest of the story.

> make it exciting again, or watch it fade away.

> -art clemons-

Thats what is my point. Self Police. What a joke. The ARRL don't get on the FCC to take action. :(So now the Hobby has ton's of people that don't care and show it. :(Q codes on VHF and UHF FM Bands. RUDE actions by people holding HF licence on those holding No Code one's. People coming onto the Repeater then forgeting about you. Don't even let you ID right before thay to the Freq. :(

Also like you said, More people work 12 and 14 hours a day. Like me and don't have time for HF. So we don't go any higher. Why, you can't injoy so why bother. But I can always use my HT from work. :) I like to just talk to my friends and family from work and the car. I know you can but HF gear into your car. But who want's a 1,500 to 2,000 dollor radio in there car so someone can break-in and take it. Like my Old VHF Radio that got riped off out of my car. :(Plus HF Gear cost to much. I mean back when I was a kid you could buy a HF Radio for only 350.00. Now it's over 1,500 for one. I rather buy a Computer over a HF Rig. you can do more then just talk. I keep my book's, Play games, Run the Internet and more. So that the real Problem. :(Not the Code as some may like us to think.

Plus I don't care for RUDE people as well. I know other's who have left the hobby becouse of this. I remember one time a lady with a small noise in her radio was talk to very RUDE. I told her to but tryed to help but becouse of what happen before I joined the QSO she got mad and I never heard from again. I know I had people when I first got on the Air when I did not know who to Talk right till me in a Very RUDE Way I'm breaking FCC Rules and other thing's. Now I know how to chat on Ham Bands. But to this day those people will not talk to me becouse I made a mistake. hehehehe! That one other reason for the problem. I know lot's of other people that have Ham Licence but will never use them again becouse of the RUDE way thay where told and talked to on the Radio. :(So much for a Helping Hand from Ham Radio. :(Also some of these are ARRL Local Rep's. An't that a kick in the Side for the ARRL. :(

Thank you. You have a good point. I hear people all the time useing
QSY, QRT, QRM, and other thing's on 2 meaters that our not right. That
again is the ARRL's problem. There are some local ARRL clubs here in the
Lakeland, And The Tampa Bay Area that don't correct on there People that
Uses HF lang. on FM Repeaters. Also the ARRL's Official Observer
Program is to keep this from our Bands as well as the 14.313's. So this
is the ARRL. :(Also the People who own the Repeaters.

As for the Code. I can send about 13 plus wpm. But I don't want or Care for HF. I'm not into that. I like to chat to My Friends right here in the Lakeland Area. I don't like all that QRM. VHF and UHF you have nice clear QSO's. I use the Internet For My Long Dist QSO's For IPhone is clear and no QRM. You have problems from time to time. But it's better then HF for QSO. Long Ago when I was a Kid and was a HAM. I use to use HF alot. But now I don't have Time like then and Not Into Contesting and QSLing no more. I just like to talk to my Friends and Family and that's it. It's Fun if you have time for it. But I don't. Plus I use the Internet Alot too. It's Fun to have QSO in the IRC's Room's and if you don't like anyone who come's into your ROOM you can KICK THEM OUT! :) Unlike Ham Bands.

So what is it about the Gentlemen's Bandplans (which the ARRL happens to endorse) that you disagree with? Provide us with your detailed revised plans covering 160m to say, 70cm, and explain the advantages of your band plans over those we currently agree to voluntary follow.

>These guys have GOT to be stopped ... they're the WORST thing to EVER
>happen to ham radio.

Oh really? Then tell us how you would have handled each and every challenge that has confronted amateur radio for the past 80 years. Begin with what you would have done to get amateurs back on the air again after WWI, and continue from there. (For a list of the first 50 years of life-threatening problems that amateur radio has faced, read "50 Years of the ARRL" published back around '62.)

(I silently wonder how many ARRL pubs you have on your book shelf, and how many of the member-bought services you've used over the last 20+ years; you'll say "NONE" but I think we all know better...)

Source record: 192881

Hi,

I am interested in getting into Satellite communications and would like to get a good capable radio. I have the following to trade (+ cash if needed) for the
right equipment:

1) Toshiba 4850CT Notebook computer. 486/75, Active color screen, 16MB, 28.8 modem, 810MB HD, full docking station with ISA slots. This PC has been used only in a home environment, never mobile! It is in perfect condition. It runs under DOS, Windows (95/NT).

2) Icom 281 50W mobile. 9600bps. Never mobile, less that 2 hour use! Great mobile or base rig. With manual and all other goodies.

3) AEA PK 232 (late model). Paktor and all the other stuff.

Please reply at brumey@ns.net

Thanks

I have heard this garbage on the news groups for years, and have never had anyone show what these "Changes" are. Fact: all modern superhetrodyne receivers do have oscilators, just like transmitters, but at very low power. Without major modification, they will not transmit a signal strong enough to be received beyond a few feet. And there is always the little matter of modulation. If you have other information on how to change a receiver into a transmitter without adding parts, post it here or stop posting what you don't know about.

We are currently fighting some TVI and telephone interference problems here
also - nothing anywhere near as serious as you describe. So far, my
biggest improvement was in going to an antenna that is on a mast over 100
feet from the house. The antennas that are directly above the house cause
interference. It does seem that distancing the transmitter antenna from
the home appliances is effective - at least in my case. I only operate 80,
40 and 20 mtr bands. Your problem sounds like it's a job for the Orkin
man.

Well Larry, I guess I could offer my view on why people want to knock
something they do not fully understand, but that would take a
while....so I will just offer my support for your comments.

While I am not yet a member of the ARRL, I do plan to join. And my
reasons echo the sentiments of your supporters' replies. I am not blind
to the fact that this is a political group,
and as such, there is always going to be some "backscratching" from one
side or the other to get pet projects under way. That being said, I
remove those items from my field of view and look at the ARRL as a great
tool for Amateur Radio in Washington, D.C.

I can find no valid reason to bash an organization, based solely on
political leanings. And the ARRL has done more for Amateur Radio than
any other organization before it. "Why fix what ain't broke?"

>(licensed 1973 and I KNOW a lot of K5s who were licensed
>in their TEENS in the 50 BEFORE I was born)

Sorry, Chris, but I disagree. That part of the movie was in the early 70's as I recall. The plot of the movie was 1997 and Jodie Foster was in her very early thirties, if I recall correctly. That makes her born in the early to mid 60's. If she was born in 1963 (just as guess), she'd be age 9 in 1972 (Is that good math, or what?). As you know, no W9 call signs were being issued then.

Extended transmit mod for the ICOM 706 MKII

This file may be freely distributed as long as it remains intact, with no modifications, additions, or deletions.

DISCLAIMER:
I assume no responsibility for damage or inaccuracies contained in this document. In other words, USE THIS AT YOUR OWN RISK. It worked for me, however I don't know if it will work for you.

WARNING #1: This mod requires the ability to remove surface mount diodes. Only those who are qualified to do this should attempt this mod.

WARNING #2: This mod seems to erase all memory channels, etc. You may want to save this info for reprogramming.

Disassembly:
1. Face the front of the radio towards you.
2. Remove the three screws in a row across the middle of the top of the radio.
3. Remove the two screws at the top rear (on the sides) of the radio.
4. Pry the top cover off from the back.
5. Disconnect the speaker at the connector.

Modification:
6. Near the top rear of the main circuit board, there is an small, oblong metal can. Directly below the right side of this can is two surface mount diodes with a white silk-screened box around them. There is also what appears to be a circuit board part number just to the left of it (mine says B4916D). Remove the LEFT diode in the box.
7. To the left of this, there is a test point marked CP3. Just to the left and above this test point is another box with two *vertically* mounted surface-mount diodes (Note: there is also a place for 5 more *horizontally* mounted diodes, with 3 installed). Remove the LEFT vertically oriented diode.

Reassembly:
8. Reconnect the speaker.
9. Put the top cover back on. Insert the top cover tabs into the slots and lower into position.
10. Replace all of the screws.

My radio did not require a reset, however I did lose all of my channel memories. It seems to be able to transmit everywhere except below .5 Mhz. I have not tested the power output at all frequencies yet.

I hope this helps everyone who have been waiting patiently for this mod.

Any comments can be directed to me:

But his question was not WHICH ht to buy, but WHETHER we recommend buying one.

I think he is going to get lots of different advice from hams with
different interests, and my own recommendation is to work on the upgrade as
soon as possible, and to get an hf radio where he can do something more
interesting. More interesting to me, anyway. He will have to decide for
himself whether he wants to talk to people all over the world, or just a
bunch of local buddies on a repeater. :)

Incidentally, why would he be interested in "listening/transmitting"
outside the amateur bands? Listening I understand. But transmitting?

1857. YO DX Contest 1997

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-29 00:00:00 UTC
From: hansbrakob@juno.COM
Message-ID: <19970729.154108.11126.6.HansBrakob@juno.com>
Source record: 192700

ANNOUNCING THE 1997 YO DX CONTEST

Romanian radio-amateur federation (FRR) and Romanian DX Club (YO DX Club) have the honour of inviting amateurs from all over the world to take part in the 1997 YO DX Contest.

These are the rules for this contest:

INTERNATIONAL SHORT WAVE CHAMPIONSHIP OF ROMANIA
YO-DX-HF

1. Contest period: every first Sunday of August from 00-20 UTC. For 1997: 03 August

2. Bands and modes: 3.5; 7; 14; 21; 28 MHz CW and SSB according to IARU Region 1 band plan.

3.Categories: A = single operator single band
B = single operator multiband
One person performs all operating and logging and these stations are allowed one transmitted signal at any time.
C = multi - operator single transmitter
multiband. More than one person performs operating and logging.

Once a station starts operating on a given band and mode, it must remain on that band and mode at least 10 minutes.

4. Contest call: CQ YO Contest or TEST YO.

5. Exchange: RS(T) plus zone number according to ITU. YO stations will send after RS(T) two letters representing the county. The counties in each call area are:
YO2 = AR. CS. HD. TM.
YO3 = BU. IF
YO4 = BR. CT. GL. TL. VN.
YO5 = AB. BH. BN. CJ. MM. SJ. SM.
YO6 = BV. CV. HR. MS. SB.
YO7 = AG. DJ. GJ. MH. OT. VL.
YO8 = BC. BT. IS. NT. SV. VS.
YO9 = BZ. CL. DB. GR. IL. PH. TR. Maximum 42 counties

6. Points: 8 points for a QSO with a YO station wherever its operating QTH is.
Example: a QSO with YO4AB/MM or 9K2/YO9HP is granted 8 pts.
4 pts. for a QSO with a station outside the own continent
2 pts. for a QSO with a station within the own continent

0 pts. for a QSO with a station within the own country which
should be made only for zone multiplier.

7. Multiplier: Sum of ITU zones and YO counties worked on each band
including own ITU zone.

8. Final score: Sum of QSO points on all bands times the sum of worked
multipliers on all bands.

9. Special conditions:
- Contacts between stations in the same DXCC country are
permitted only for zone multiplier.
- A station may be worked only once per band regardless
of operating mode
- All competitors have to abide to these rules and make
this statement on the Summary sheet.
- In case of dispute, the final decision is taken by the
Contest Committee and cannot be overruled.

10. Log instructions:
- all times must be in UTC
- IMPORTANT! Use separate sheets for each band,
otherwise that log should be considered as Check log.
- report RS(T) and number of the own ITU zone sent- only
at the beginning of each sheet and when changing operating mode.
- report RS(T) and number of ITU zone or YO country
abbreviation received- for each contact.
- zone and county multipliers have to be indicated in 2
figures or 2 letters in the ZONE column.
- each log has to be accompanied by a Summary sheet
showing usual data: callsign, country, name, address, participation
category, number of contacts, points, multiplier, score, station
description. Also it has to include a signed statement that all contest
rules and regulations for amateur radio in the own country has been
observed.

11. Deadline: all entries must be postmarked within 30 days after the
contest and mailed to the following address:

Romanian Amateur Radio Federation P.O.Box 22-50 R-71100 Bucuresti,
ROMANIA

12. Classifications and awards:
- separate classifications for each country and
category.
- the top score competitor regardless of entry category
will be entitled "International Short Wave Champion of Romania" and will
get a crystal cup.
- the top score from each continent regardless of entry
category will be entitled "Continental leader" and will become Honorary
Member of the YO DX Club.
- the stations classified on the first place in sections

Band C and on each band in section A in each country will get an award.

In the UK that part of the band is in the transmit section of the PMR band, with the RX section around 166MHz. I also know that the British military use AM on about 170.0125MHz.

Most VHF xtal-controlled rigs for the 2-meter band should be re-tuneable up there, possibly needing the odd capacitor/coil reduction if it cannot be tuned exactly. Replacing ferrite slugs with brass will often do the trick too.

I have some 2-meter stuff on my homepage, but it is somewhat limited (ZN414 receiver and a simple FM transmitter) for your application.

Because of our arrangement with OFFSHORE BANKS-

Now you can get your own UNSECURED MAJOR CREDIT CARD at
interest rates as low as 6.95%, GUARANTEED!

*Accepted at millions of locations world-wide, this is
a MAJOR Bank Credit Card you are very familiar with!
*No Credit Check!
*No Social Security Number needed for approval!
*Even Bakruptcy-No Problem!
*$5,000 Credit Limit, minimum!
*Unsecured Line of Credit of$15,000.!
*BUSINESS paying $4800.00 monthly, with FREE WEB PAGE!
* Could earn up to $460,000 yr!

I am also available to answer all your questions!

I agree also. It's very much easier to blast away at the way things are than to roll up your sleeves and put in the work to change it, or to produce a viable alternative. I have a great deal more respect for Ed and the other folks who are doing their best than for the people whose commitment is limited to an occasional five-minute whacking at the keyboard.

I am actively promoting the positive aspects of amateur radio. At the local Boy Scout Camp this summer, I am the control operator at the ham shack. I am one of Morris County's Radio Merit badge counselor's. I have put together small electronic kits for the scouts, at my own expense to get them involved in understanding the technical aspect of amateur radio (as opposed to opening up a box and pulling out a radio). I don;t profess to being a technically oriented person. I understand some, comprehend some and if I don't know I ask someone to explain. I can see the magic in radio and understand that it isn't done by hocus pocus. I still marvel a the sight of a satellite streaking across the sky and marvel at the how it works and for the people who got it there.

I take pride in the fact I am an amateur operator, something you obviously do not

I am active in local and county emergency management teams. I've been to Florida after Huricane Andrew, I've been to the midwest during the floods, all in a capacity to help provide support, both as a pair of hands and a set of ears, as well.

I am active in a number of radio related organizations

I submitted a potential counter proposal for licensing requirements (aka "THE CODE") to the powers that be, duly noting that there were others involved in its construction (IE: Carl, Gary, Bill, etc) (noting of course, your total absence in the development)

I am working with a group of concerned amateurs to get several those people, we feel will best support amateur radio elected into ARRL positions. In otherwords, working within the system. You profess that the ARRL "stinks" yet when pressed, you have NEVER come up with a better

organization. At least SCO tried. Granted, it got a bit wacky at the end, but he tried. You, on the other hand will never break a sweat, even in Sunny Hot Central Florida, as that would require effort and effort is not in your vocabulary

WHAT I DON'T DO (and you most certainly do)

continually degrade amateur radio (I've seen your posts on rec.cb)
I don;t provide snide asinine answers to people with legitimate questions (like you do so many times)

I don't continually whine and complain like you and others, I might add.

I take an active part (emphasis on the ACTIVE) Drew. Unlike you, you , who prefer to leech of others. You offer nothing constructive, and ABSOULTELY nothing positive. I'm surprised you even admit your a licensed amateur. Seems to me if someone were so embarrassed by an activity as you seem to be about amateur radio, they'd hide the fact rather than hold themselves up to the continual ridicule that you seem to get from the rec.scanner and rec.cb groups, as well as this one.

I don't make a point of promoting the negative aspects of amateur radio (IE: you anal retentive compulsion with the losers on 20 and 75 meters) Then again, birds of a feather.....

I don't denigrate people based on their age like you and Roger. I most certainly don't spread vicious racist remarks like you constantly do (Rememnber you little posts following the riots in Northern Florida..I do)

In short, your a Burt. Repitive, droning and boring to the point of tears.

I am a do'er and a joiner. You represent the hanger ons, the nay sayers, the (and I love this) the Monday morning quarterbacks and the armchair generals. The only way you could be lead is if some put a ring through your nose and pulled you, most likely kicking and screaming all the way.

In closing, I'll ask you your own question..

And what exactly are YOU doing to better the amateur radio service?

I'm sure we all the the answer....NOTHING NADA ZILCH ZIP ZERO NULL
get the drift?? I knew that you would

>It has become what I remember CB being in some areas, a sorry state
>for the discipline.

I don't think the code requirement alone is the reason for these
types of problems. Like any complex system, there are a myriad of
interacting factors that have resulted in the problems amateur radio
has today.

A leading cause, in my opinion, is the lowering of entrance requirements
to "attract new blood". Any time you lower requirements, you accept
people from a population pool which more closely resembles the mean
of the population as a whole -- that is, if you imagine a bell curve,
and your standards would normally only allow people under the right tail
of the curve, if you lower standards to allow more in, you are now
allowing people from the center of the curve (e.g. closer to the mean)
into your selected population.

Amateur radio history is replete with examples of "lowering standards".
First, publically-available question pools with exact questions and
answers (ask any educator what the value of these types of tests are
worth to test people's knowledge) is a major problem. Elimination of
the code examination for VHF is another example. Moving to multiple
choice code examinations is another. Breaking up Element 3 into 3A and
3B to make it "easier" to study. Re-writing the Novice question pool
to a 13-year-old reading comprehension level.

Those are just a few examples from the 15 years I've been around
ham radio.

Another implication of lowering standards, and equalization to the
mean of the population of a whole, is now amateur radio society starts
to take on the problems and issues surrounding our society as a whole.
Pick a societal problem... You can easily see its affect on amateur
radio.

There is no "easy" solution to these problems, because amateur radio faces many different problems, and no one solution will cure it. Lowering standards further is not the answer, it will only create more difficulties. Changing standards is not the answer, because all it does is support the "status quo" of what exists today within radio. Increasing standards might be the answer, but who decides what standard is more important than another, and who knows whether or not within our fluid society if changing standards will create another set of problems.

Okay, enough doom and gloom. What aspect of amateur radio has attacted you the most? Packet? ATV? 6 meters?

I don't quite understand why, but Usenet seems to act as a magnet for
people who only have the energy to complain, not do anything constructive.

The best remedy I've found is to just *do* something constructive, and
ignore the complainers as much as possible. Sounds like you're doing
the same thing. Have fun, and ignore the jerks.

> mike

The problem is NOT the ladder line. Get the filters from HRO or AES.
Radio Shcak also sells them. You will need one filter per phone plus
get a filter for installation where the phone lines enter the house.
There are two style of the filter. One is in a plastic box and it just
plugs into the phone line and the phone. The other has leads hanging off
it and comes with connectors; you have to cut the phone line and
hard=wire it into the circuit. Use the plug in type.

The problem is not with your rig but you will never convince your
neiughbors or anyone else of this fact. Try to explain it to them this
way: Their phones and hooked up to miles and iles of wire, all of which
is acting like a great big antenna. Your signal is very strong because
of how close your antenna is to their phones. Thus, your signal is
being picked up by the phone lines and routed into their phones. It's
just physics.

I had the same problem on my own phones. I was running 100 watts on all
HF bands, using ladder line to feed 135 foot dipole on 160, 80, and 40,
and a tri-bander on 20, 15, and 10. I was getting into the phones when
I operated on 80, 40, and 20. I installed the plug in filters on each
phone and a hard-wired filter on the phone line entering the house and
had no problems. The filters break up the electrical length of the
phone lines.

Care to elaborate on what the bell curve represents? Just what
is the characteristic that is at the "right" end of the curve
as opposed to the middle or god forbid "wrong" (left?) end
of the curve? Is it intelligence? Is it good manners? How
about docileness or brashness? Just what is it this curve
you have in your mind? Perhaps it's a measure of their knowledge
of amateur radio and electronics. If that is the case, and
if we have in fact lowered our standards, please explain how
that relates to the problems KF6MYR reported?

> Amateur radio history is replete with examples of "lowering
> standards". First, publically-available question pools with
> exact questions and answers (ask any educator what the value
> of these types of tests are worth to test people's knowledge)
> is a major problem.

So is it "people's knowledge" that is the problem? Have you
taken any time to help address this problem? Computer generated
questions from a parameterized pool of questions would surely
fulfill the FOIA requirements and would presumably address your
concern. Write the program. As the effort for effort's sake
crowd likes to shout: "Just do it!"

> Elimination of the code examination for VHF is another example.

Again, in what way does relate to the problems mentioned above?
The behaviors KF6MYR describes existed long before the revised
technician license became available. In this area, at least now
the conversations on many repeaters are of a technical nature
(although not always radio related), and not related to who's
in the hospital and how's so-and-so's lumbago.

> Moving to multiple choice code examinations is another.

Do we have a problem with people not knowing the code well enough?
Are there on the air incidents that can be traced to someone
not knowing Morse Code quite well enough to pass a solid copy
exam but being able to pass a fill in the blank or multiple
choice examination? As I've asked many times before, what's
the harm in a bad fist or lousy ear?

> Breaking up Element 3 into 3A and 3B to make it "easier"
> to study.

We should be making things harder to study? I know, let's
publish all learning materials in French or German. After
all, that's how my mother had to learn Chemistry. We should
go back to that tried and true method.

> Re-writing the Novice question pool to a 13-year-old reading
> comprehension level.

Ah yes, we should instead require them to be written to a
college graduate level. Please explain how changing the
wording of the questions as opposed to the content of the
questions changes *anything* except the required reading
level to comprehend the wording? Or do we need to make
sure that amateurs reading comprehension is improved. That
might earn us some points with the various literacy campaigns.

> Those are just a few examples from the 15 years I've been around

> to take on the problems and issues surrounding our society as a whole.
> Pick a societal problem... You can easily see its affect on amateur
> radio.

Hmmm, this is an even more interesting conjecture. Somehow this
miraculous bell curve is going to select a subset of the entire
population that doesn't have any of the issues and problems the
population as whole has. This is remarkable. If you could
really develop such a curve, you'd have found what researchers
in testing and performance prediction have been looking for
for years. Personally I'd rather just hire Sylvester McMonkey
McBean and have everyone go through his Star-Off Machine. Seems
like a simpler approach.

> There is no "easy" solution to these problems, because amateur radio

> Increasing standards might be the answer, but who decides what
> standard is more important than another, and who knows whether or not
> within our fluid society if changing standards will create another
> set of problems.

Well since you haven't addressed how these so called lowering
of standards has contributed to any of amateur radio's problems,
it's difficult to determine whether raising, lowering, or
changing them is appropriate. In fact, you haven't addressed
what the desired outcome is, so determining what standards
should even exist is pretty tough. Although I've asked the
question many times, I've still to hear and answer: What is
the purpose of amateur radio examinations and what are we
trying to select, i.e., what's on this imaginary bell curve.
Michael seems to be suggesting that it should be having
stars upon thars.

Not that I like the ARRL, but can you explain how people using
incorrect terminology on VHF frequencies is the ARRL's problem?

>There are some local ARRL clubs here in the
>Lakeland, And The Tampa Bay Area that don't correct on there People that
>Uses HF lang. on FM Repeaters.

Why is it the job of local ARRL clubs to "correct" people?

>Also the ARRL's Official Observer
>Program is to keep this from our Bands as well as the 14.313's. So this
>is the ARRL. :(Also the People who own the Repeaters.

The Official Observer program should help in these regards, but has lost
a lot of its teeth over the years. However, the Official Observer program
has no regulatory or enforcement authority. If you get a "pink card" from
an OO, it has no teeth.

Hi I looking Swap/Sell some New Amateur Radio Equipment...
I have a Comet SB-123 1.2ghz 7.2dbi Mobile Antenna(New In Package)
Also a Comet Heavy Duty Magnetic Mobile Mount, model# MS-5LX NN comes with 13.5' RG-188A/U Low Loss Cable and 'N' Connectors...Designed for use on 1.2GHz(New In Package)
Lastly, One G5RV High Frequency Dipole Antenna, Made by AMP SUPPLY(New In Box)
Note: All 3 pices of equipment were never used and are New in original Packages....

I'm looking to Trade for a Kenwood MC-60A Amplified Desk Microphone, in good working condition. I would prefer trade, however I will consider cash for Items.....Thanks and 73's

You are a heretic.

Code is an integral part of the history of ham radio and is worth
learning for that reason alone. It's important to understand where the
roots of the hobby are or you cannot truly be a part of the fraternity.

After all I'm sure you learned to drive a horse and buggy so you could
understand the wonders of the automobile. In the same vein I never fly
using modern navigation equipment without first learning how the old
mountain top light system worked. It's simply impossible to appreciate
the rich history and magnificence of our modern world without paying
homage to the past.

Wise up pal!!

On the other hand, maybe it is a bit silly!

So then what your saying is the ARRL is powerless and Amateur Radio is dead meat. :(That why I no longer a member. Why Pay or support a Group that can't do it's job of Making Amateur Radio a better place. That was the point of Starting the ARRL in the 1st place. So Amateur's Would have a Voice in Washington and to the Public.

Also by what your saying to me is, The Company's that just love to take all our VHF, UHF, Bands away. You are giving them a Voice. For if you can't use the band becouse of Radio Shack selling Ham Gear to Anyone with the Cash and CBer's getting Ham Licence so thay can get and sell Ham Amp's for uses on the Childran Band and Radio's For Uses on VHF and UHF Amateur Bands As well as Mod them for use on GMRS Bands too. becouse the CBer's know that the FCC is not doing a thing to stop them. Like the 911 caller on the Tampa Area Repeaters. Local Law could not get the FCC to do anything and the person is now loss and getting a BIG LAUGH! I can list more. You all up there know what I'm talking about. I keep up on the local problems.

I for one don't want to see Amateur Radio go down the Toilet. It's the only place left where people can Chat. Unlike the CB witch is totally Useless now thank's to FCC. All that will be left are Cell phones, Pager's, and GMRS. I love Radio very much and don't want to loss it to Pager and Cell Company's that don't like Ham Radio becouse it's FREE! Just like the Internet witch is also fulling the same fate. MONEY!

The Code is lossing power to becouse The Big Ham Company's see how much money can be made if the code is droped. I know CB'ers that are dieing to get into Amateur Radio. But the Code Stop's them. also these CBer's are not good one's. No there one's that go on the CB driving people nut's like on 14.313. Plus more access to getting Amp's for use on CB Radio. I know. I talk to one Called King Kong (KD4MMM) In Lakeland Area. He Build's and Sell CB Amp's. He Want's to get into HF Amateur Radio. Plus he's a 14.313 Cber too. He only act's like a YOYO! Never talks down there. He lives to start fights and run people down. Another one is (WD4HFD) Big John. He Sell's and Repairs CB's. He sells Amateur Amp's to CBer's. Now there the Big Too in my Area. I know Even More. Now WD4HFD

is a General Class Amateur. He got Fined for Not IDing himself on HF and now Run's only the CB becouse of it. He said he dones this becouse of him getting Fined and to get even. Well Need I Say More.

I guess like you said, you can't Stop it. So that, that, Right. There no way it can get any better and when the code is droped. Amateur Radio Will be just like the CB. The ARRL will Die all but the Selling of Book's and Testing. Just another W5YI. OUT FOR THE MONEY! That's it.

Well Ed, I think the Code is not the problem with new people getting
into Amateur Radio so much as the people themself. I hear people jump
into QSO and forget all about the other person. Witch is RUDE. I hear
people till sex jokes, Off color jokes, to out right 4 letter words. I
see people that look down on people just becouse there are a No Coder.
When it's ALL Class's that make us look bad. I know of people that quit
Amateur Radio and will never return becouse of The Way thay where talked
to. Out Right RUDE! I don't think anyone lives the Amateur Code Of
Considerate, Loyal, and Friendly people. Now it's Dog Eat Dog.
I think W9EEA would roll over in his grave if he seen how we all act

now. I know my Grandfather would. He never though Higher of himself then other's. Just becouse he was at the top of class.

Like my last message. You said the ARRL has no power no more. So why should I support a group that can't change a thing? All Talk and No Action. For if you have rules that are just words on a page and have not power. Then what the point in going to wishington and changing them. For if the FCC or who ever don't do anything to keep people in line. Why Bother.

Just like I know of No-Code Ham's that run the HF bands anyway. Code or not. Why I asked them. "Well just like the CB Band, the rules are not enforced anyway. So I have nothing to fear from the FCC or the ARRL OO's." So thay do it. Soon like the CB it will be a free for all. As soon as more and more people learn that nothing will be done to them if thay miss use the Amateur Radio Bands. End Of Story.

Well Ed am I right? :)

Bob, explain to me where in Part 97 it says that using QSY, QRT and QRM
on 2m is not 'right' who told you this?

> That again is the ARRL's problem.

Bob, you need to put on the coffee OM and have a couple cups. The ARRL
is a PUBLISHING COMPANY they publish a magazine called QST, they are NO
DIFFERENT than 73, CQ or any other ham mag other than they probably do
more lobbying in Washington. Where is it written that the ARRL is
somehow responsible for operating proceedures of hams?

> There are some local ARRL clubs here in the
